The Part that Does the Business.

Sell The Radiator That Radiates

Take a common sense view of heating. If you wish to heat a poker you hold it OVER the fire, not at the SIDE.

We hold 96 to 120 pokers over the fire, each having a hollow air space in center, through which a current of air rapidly passes, sending the heat to all parts of the room, getting results which no DRUM or SIDE HEATER can give. Advertised in 82 family papers and magazines, bringing 18,000 inquiries about the Rochester Radiator. These from YOUR town are referred to YOU while you carry our goods. Thus we sell them to you and then sell them FOR you. A postal will bring you full description and proofs from men in the trade who have sold thousands of them. Made in 12 styles, and sell from $2.00 up.

We will remember you with a Souvenir later; watch out for it.

IMPROVED

Young America Scale

BEST IN THE WORLD.

It is made of STEEL, TIN or BRASS SCOOP TOP

WHITE TILE TOP, BRASS DIAL

A most beautiful and attractive scale for all purposes. Beautifully enameled, ornamented and striped. Weighs 20 pounds by ounces. Occupies but little space. Is light and easily moved. It can be regulated by turning the brass screw on top. It is always ready and easily understood. It is a convenient scale to use and has no weights that may be lost. You can look this one in the face to prove its accuracy without looking for weights. Every scale examined before leaving the factory and warranted correct. MANUFACTURED BY

AMERICAN CUTLERY CO., CHICAGO, ILLINOIS.

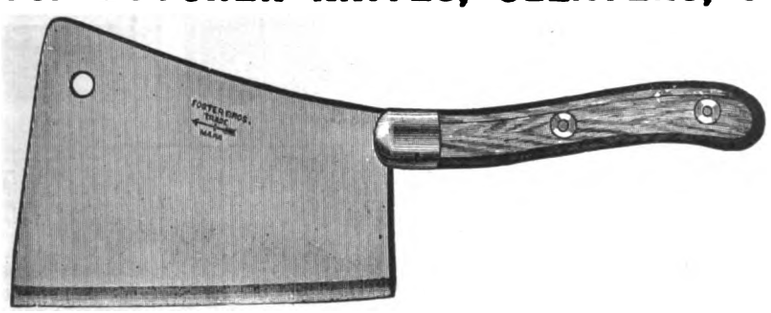
CHATILLON SPRING SCALES.

OUR attention having been called to the fact that inferior makes of Spring Scales are being sold to butchers as "Chattillon" Scales, we deem it due to the trade and to ourselves, in order to protect the merits of our Spring Scales, so well and favorably known for more than sixty years, to inform you that every Spring Scale manufactured by us

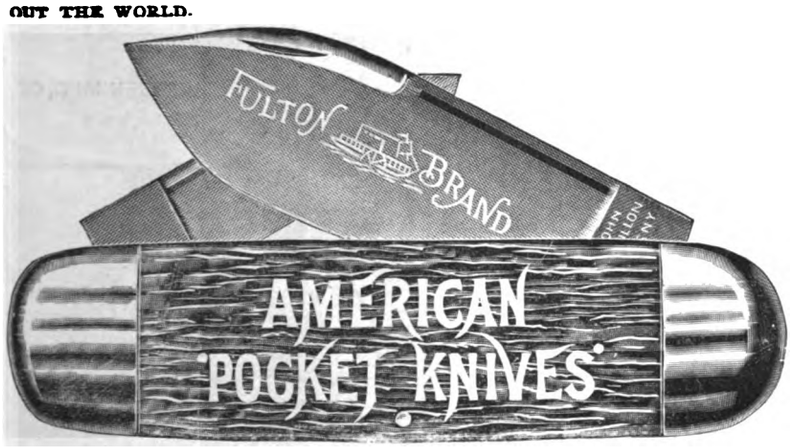


has our name as makers plainly on the dial, thus:

John Chatillon & Sons. Makers. New York. U.S.A.

and any scale without this name on the dial is NOT A GENUINE CHATILLON SCALE.

FOSTER BROS.' BUTCHER KNIVES, CLEAVERS, STEELS, ETC.

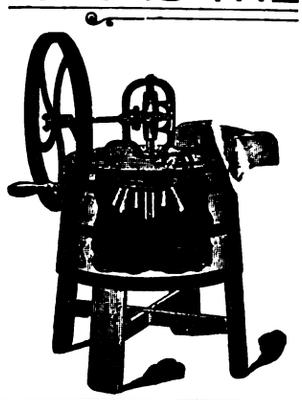


These Tools are recognized in the Markets, Packing Houses and Abattoirs throughout the United States as the standard of excellence, quality being the first consideration. We carry in stock every style and size of Knives, Cleavers and Steels used in cutting meat; also Knives for kitchen use in Hotels, Restaurants and for domestic purposes.

FRIEDERICH DICK'S MAGNET DIAMOND STEELS.

By careful workmanship and the use of a special steel in their manufacture THEY HAVE BECOME FAMOUS THROUGHOUT THE WORLD.

Finest Quality American Pocket Cutlery in large variety. Knives that are good sellers and will give satisfaction to the user.



ESTABLISHED 1835

JOHN CHATILLON & SONS, New York City.

85 to 93 CLIFF STREET and 12 JACOB STREET.

WHY IS THE

O. K. THE BEST ROTARY WASHING MACHINE?

—BECAUSE—

1.—It is the only Rotary washer that has **Revolving Steel Ball Gearing**, reducing the friction and thus making machine so **light running** and almost **noiseless.**

2.—The tub is made of **Louisiana Red Cypress Lumber, cherry finish**; the legs are **solid with tub** (not removable, breakable legs fastened with screws).

3.—The wheel turns right or left, pin wheel or dasher reverses automatically, turning the clothes back and forth through the hot suds, and cleaning them without **rubbing** them to pieces.

4.—This washer is made by **experienced mechanics**, and will out-last any other washer on the market.

5.—The tub has a wringer box fastened with steel brackets.

6.—The lid on the tub closes tight, **no escape of steam.**

Manufactured by H. F. BRAMMER MFG. CO.,

It's Easy To Run

The Blackstone Rotary Washer
FORMERLY VANDERGRIFT ROTARY

IS the product of twenty-seven years' experience in the manufacture of washing machines. We guarantee it to be the most perfect machine of its kind on the market.

It's made of the very best material—made to last a long time.

It works both ways, forwards and backwards, and is supplied with our new patent device for fastening legs on with bolts instead of with screws and brackets as heretofore.

It saves clothes; washes them clean. It saves health; permits no foul steam to escape from soiled clothes, as it closes down lightly.

From Margam Forge, Glamorganshire, South Wales, to Martin's Ferry, Belmont Co., Ohio.

MF

Note the Coincidence:

The most favored brand of roofing tin, the MF which originated at Margam Forge in South Wales about sixty years ago, is now being produced by the American Tin Plate Co. in its works at Martin's Ferry, Ohio.

At the Martin's Ferry Works the MF old style process has been combined with the "New Method" of finishing Terne Plates. The result of this happy combination has been the U. S. Eagle N. M.

Ask W. C. Cronemeyer, Agent, 1211 Carnegie Building, Pittsburg, Pa., for our new booklet which teems with useful information.

U. S. TRADE MARK N M

AMERICAN TIN PLATE CO., Battery Park Building, New York.

The EAGLE Mop Wringer and Pail

Is made of the best materials in the best possible manner.

Hard Maple rollers with steel axles, Oil Tempered Steel Springs, Machine Steel Treadle and Portable Roller Shank, Best Malleable Iron Guide Plates, Treadle Axle and Foot-Holders, combined with a special white Cedar Pail, make the EAGLE the best in the market.

They afford a good profit to the dealer and the best of it is, THEY SELL.——————Let us or your jobber quote prices.

HARDWARE

THE NEW YORK PUBLIC LIBRARY
ASTOR, LENOX AND TILDEN FOUNDATIONS
1904

The L. & I. J. White Co., Buffalo, N. Y., manufacturers of Machine Knives and Edge Tools that have a world-wide reputation, have recently erected extensive additions to their plant which, it is conceded, will double its productive capacity. They are, in their new equipment, adding entirely up-to-date appliances and discarding mechanical devices that cannot be relied upon to meet the demands of their rapidly increasing output.

✤

J. R. Keim, Buffalo, N. Y., is now the owner of all the machinery, dies and tools formerly the property of the Shelby Steel Tube Co., for the making of forksides, upper rear stays, lower rear forks, ladies' bent tubes, handle-bar tops, fork stems, etc., and is in pisition to manufacture these for the trade at large at prices in harmony with the reduced quotations now being quoted on seamless tubing.

✤

The Chantrell Tool Company, Reading, Pa., have recently completed their new factory buildings, and installed the necessary equipment of machinery which triples their productive capacity. It will undoubtedly enable them to ship promptly all orders for builders and general Hardware with which they may be favored. The new plant will give employment to 250 additional employees.

✤

The Pittsburgh Steel Co., Pittsburgh, Pa., in a recent circular forwarded to their patrons, call attention to the following: "Owing to the heavy shipments of coal and other commodities destined to the Northwest, and the enormous tonnage which must pass through the lake ports before close of navigation, the various transportation lines are anticipating a shortage of cars. Notwithstanding the fact that they are pressing all of their available rolling stock into service, the situation is becoming more acute every day. The object of this letter is to inform our patrons of the true condition of affairs, and we think it advisable for them to get their specifications for Nails, Wire and Steel Hoops and Bands in promptly and keep their stocks well lined up, thereby precluding any possibility of our not being able to execute their orders with prompt dispatch."

CANADIAN WHOLESALE HARDWARE ASSOCIATION.

The Canadian Wholesale Hardware Association met at Toronto on Sept. 22 and 23, last. The election, which took place on the second day, resulted as follows:

President—F. O. Lewis, of Lewis Bros. & Co., Montreal.

Vice President—John Bowman, of the J. Bowman Hardware Co., London.

Secretary-Treasurer—James Hardy, of Jenkins & Hardy, Toronto.

Executive Committee—Thomas Birkett, Jr., T. Birkett & Son Co., Ottawa; Alfred Jeannotte,of L. H. Herbert, Montreal; W. Shaw, The Chinic Hardware Co., Quebec; C. A. Whitwam, The Hobbs Hardware Co., London; A. E. Macpherson, A. Macpherson & Son, Montreal; Past President W. Vallance, Wood, Vallance & Co., Hamilton; Past President T. H. Newman, Caverhill, Learmont & Co., Montreal; Past President W. Stark, Stark Hardware Co., Montreal; Past President T. B. Lee, Rice Lewis & Son, Limited, Toronto, and Secretary-Teeasurer Hardy.

THE HUNT & DORMAN MFG. CO.

The Hunt & Dorman Manufacturing Company, of Cleveland, Ohio, were recently incorporated for the purpose of continuing the business formerly conducted by Messrs. James T. Hunt and Edwin H. Dorman, who were for a number of years associated with the H. B. Hunt Stamping Co. They have a large and well equipped shop and thoroughly skilled workmen, who have gained a well earned reputation for first class ability in the manufacture of dies of all kinds, blanking, forming, combination and double action. Their die makers have had in the neighborhood of twenty-five years experience in the business, and take pride in producing nothing but what will stand the severest test. It can be demonstrated by the large number of satisfied customers that they know how to make dies. This company has few competitors for the high class of work for which they are noted.

They also have a metal stamping department and engage in sheet metal work of all kinds. While they do not put any one article on the market, they manufacture anything in the sheet metal line, the larger part of their business consisting in manufacturing such articles to order. Anyone desiring quotations on any contemplated work, either dies or the various kinds of stampings, will do well to correspond with them as their prices are regarded as reasonable and the quality of the work guaranteed.

NINE MONTHS' FAILURES.

Fewer in Number but Larger in Liabilities Than in Corresponding Time in 1902.

Commercial insolvencies in the United States during the nine months this year, according to reports to R. G. Dun & Co., were 8,176 in number, with assets of $53,109,285 and liabilities of $101,655,855. As to number, there appears a most encouraging decrease of exactly 500, as compared with the corresponding months last year, when the aggregate was 8,676, but liabilities this year have been very much heavier than the $85,407,490 reported a year ago. In manufacturing lines there were 2,005 defaults, involving $43,683,702, against 2,055 last year for $33,764,818.

Trading failures numbered 5,761 and the defaulted indebtedness was $40,276,821, as compared with 6,147 failures in the corresponding nine months of 1902, when the sum involved was $40,726,020. Other commercial defaults, not properly included in the two chief divisions, such as brokers, agents, laundry, livery, etc., were 410 in number and $17,698,332, against 474 a year ago, when the amount involved was $10,915,752. Banks and other similar fiduciary institutions suspended to the number of 66, with $8,721,611 of liabilities, whereas there were 47 last year, involving $28,027,198.

Failure returns for the third quarter do not make as favorable comparison with last year's figures as appeared for the first half of the year; 2,548 defaults slightly outnumbering the 2,511 that occurred a year ago, and liabilities of $34,858,595 far exceed the $25,032,634 in the corresponding three months of 1902, the increase being provided solely by the manufacturing division, where liabilities of $17,548,558 compare with $8,824,798 a year ago. As shown in the monthly statements, this rise of almost 100 per cent. was chiefly due to a few suspensions of great size.

CENTURY CASH REGISTER.

The following letter is selfexplanatory:

Danville, Ill., Aug. 5, 1903.

CENTURY CASH REGISTER CO., LTD., Detroit, Mich.

Gentlemen: We now have in use six of your Cash Registers in our various stores and are so much pleased with them that we take this occasion to write you about it. We considered at first buying high priced Cash Registers, but upon making a close examination of your machine we were so much impressed with its merit that we thought it folly to pay an extra price and get no better service. We shall doubtless need several more Cash Registers and assure you that we will use your brand. Wishing you every success, we

Yours very truly,

Pearson-Linn Company.

The Circulation of "Hardware" is Larger Than That of Any Other Paper in the United States Devoted Exclusively to the Hardware Trade.

Editorial Trade Review.

The apprehensions regarding the anticipated harvesting of our wonderful agricultural wealth have in almost every instance been found groundless as to unfavorable results. The indications are that the sanguine estimates of the planting season will almost reach fruition and the farming communities will revel in hopes of wealth almost beyond the dreams of avarice.

The reports in many instances show the sales of September were ahead of the banner year of 1902, and with every likelihood of the season showing record breaking results in many trade centres, October already continuing the stride that made the figures of September so satisfactory as to volume.

The labor disturbances which have been so prevalent in some of the larger cities, especially New York, have undoubtedly handicapped the progress of a number of large enterprises that to all previous appearances had been successfully promoted. This, while placing in jeopardy many contemplated improvements not yet beyond the "plans and specification" stage, will scarcely be felt in all their force until the programme for next year's employment shall be formulated. Unless some decisive action takes place in the concentration of industrial independence from strike conditions, hesitating capital will be diverted to other uses and a check be given to the future development of our Metropolitan greatness, that it will take a long time from which to recover.

The depressing condition of the Wall Street barometer has had only a local influence, as far as the Hardware trade shows any effect from losses suffered only by the stock gamblers themselves; the general belief being prevalent that the lambs among those who take an occasional flyer, got out of the game at the earliest stage of the proceeding, leaving the big fellows to fight it out among themselves.

Fortunately it is no longer fashionable for business houses to dabble in widely fluctuating securities and enjoy the possible profits, consequently greater attention can be given to the details of a business that has been more widely expanded in the diversity of its requirements, during the last five years, than in the previous decade. Business affairs are gradually compelling such closer attention in every department, that the conditions of the stock market no longer create a ripple of astonishment.

Manufacturers of builders Hardware are still busy with the completion of Spring orders, yet unfilled, but which may be relied upon to keep the factories moderately active for some time Labor conditions undoubtedly have had a due influence on the additional orders required to average up a general stock for the present season. Conservative estimates of positive wants, with but little speculation on possibilties, form the actual basis of current requisitions, in addition to goods still due on back orders.

FOREIGN TRADE IN IRON AND STEEL.

The anticipated change in the movements of iron and steel in the foreign trade of the United States did not make itself as apparent in the August record as was expected by students of this subject. The figures of the August imports and exports of iron and steel just presented by the Department of Commerce and Labor, through its Bureau of Statistics, show that the imports of iron and steel in August, 1903, were $3,440,100 in value, against $3,529,676 in the preceding month—July—and against $4,123,314 in August of last year. Thus the falling off of imports of iron and steel in August, compared with the preceding month, amounted to less than 100 thousand dollars, and compared with August of last year amounted to $683,214. Practically all of the reduction occurs in ingots, blooms, slabs, billets, and bars of steel, and tin plates. The quantity of ingots, blooms, slabs, billets and bars of steel, and steel in forms not otherwise specified, imported in the month of August, 1903, was 45,650,655 pounds, against 74,076,956 pounds in July, 1903, and 87,420,104 pounds in August, 1902. In tin plate the importation of August, 1903, was 6,977,012 pounds, against 11,598,703 pounds in July, 1903, and 6,287,106 pounds in August, 1902. While the reduction in these two items shown in pounds seems large, the actual reduction, as already shown, is less than 100 thousand dollars, as compared with the preceding month of the present year, while for the eight months ending with August the total value was $32,289,525, against $23,456,760 in the corresponding eight months of last year, and $12,210,382 in the corresponding eight months of the preceding year, 1901.

The following table shows the total value of iron and steel imports in the eight months ending with August:

Value of iron and steel, and manufactures thereof (exclusive of iron ore), imported into the United States.

Eight Months Ending August—	Value.
1898	$8,759,226
1899	9,388,862
1900	14,722,696
1901	12,210,382
1902	23,456,760
1903	32,289,525

On the export side the figures of iron and steel for the month of August show little change compared with the preceding month, or corresponding months of the preceding year. The total exports of iron and steel for the month are $8,363,443, against $8,641,525 in August of last year, while the total exports of iron and steel during the eight months ending with August, 1903, are $65,466,934 in value, against $65,904,829 in the corresponding months of last year.

NEW YORK STATE ASSOCIATION OF RETAIL HARDWARE DEALERS.

In a confidential circular recently issued to the members of the New York State Association of Retail Hardware Dealers by their secretary, John R. Taylor, of Little Falls, N. Y., a number of reasons are put forward why the dealers of the State should all be found working together with fidelity and zest in the correction of many abuses which make department stores and catalogue houses assume unnecessary prominence in a growing closeness of competition.

Reference is also made to the necessity for watching carefully the action of Congress when the Parcels Post Bill comes up at its next session. The letter points out how essential it is for the well-being of the small Hardware dealer, that influence should be individually and collectively exerted to see this bill fail in becoming a law. It is greatly to the advantage of the retail dealers in this State that efforts should be made under the auspices of this important association to band together in a strong body, worthy of the Empire State, to protect their united interests. When compared with the good that can be accomplished by concerted action, the cost of joining the association is a mere bagatelle.

J. D. WARREN MFG. COMPANY.

J. D. Warren Mfg. Co., Chicago, Ill., whose business career has been established by giving much attention to the arrangement of Hardware stores, are placing upon the market a large variety of appliances in the line of Shelving, Cabinets, Cases, etc., for the different classes of goods required by the up-to-date Hardware establishments, are now offering to send to the Hardware merchant definite information in regard to the accommodation of his stock and the arrangement of his store. This information is accompanied with drawings and colored illustrations, and will be sent free of charge to any merchant who desires it, and who will inform the company of the number of feet of wall space required for shelving, at the same time indicating the leading line of goods carried, extent of stock, etc. It is important also that it should be stated which side of the store, viewed on entering, is the preferred side for each class of goods.

DEATH OF GEORGE WILKINSON STORM.

George Wilkinson Storm, of the Storm Mfg. Company, Newark, N. J., died on the 27th ult., at his home in East Orange. Mr. Storm was born in Poughkeepsie, N. Y., in 1856. He attended St. Mark's School, in Southboro, Mass., and was a member of the 1879 class of Harvard University. Mr. Storm was treasurer of the Edward Storm Spring Company until March, 1890, when he founded the Storm Mfg. Company, of which he was sole proprietor. The plant was moved from Poughkeepsie to Newark in May, 1890. In April, 1902, the company were incorporated, and Mr. Storm was elected president. Mr. Storm was a member of the Newark Board of Trade, and a vestryman of Christ Church, East Orange. He is survived by a widow and two daughters. The funeral services were held on the 29th ult., and the interment was at Poughkeepsie on the following day.

DEATH OF LOURDE J. S. GREENE.

Lourde J. S. Greene, who for the past two years has been sales manager for the Red Jacket Manufacturing Co., of Davenport, Ia., died on September 28th at his home on Thirteenth Street. Mr. Greene was born in Genesio, Ill., on July 15th, 1873 where he lived for seven or eight years when the family removed to Strling, at which place he attended school until he was sixteen years of age, when he started his business career. In 1899 he became the road representative of the Red Jacket Mfg. Co. In this capacity he traveled all over the United States, and after two years, having acquired a thorough knowledge of the company's business, entered its office as sales manager. In this position he had the supervision of the entire traveling force, the advertising, etc. He was very active in promoting the interests of the company, and won and held the good will of all its customers and of all the traveling men over whom he was placed.

NEW YORK STATE HARDWARE JOBBERS' ASSOCIATION.

The annual meeting of the New York State Association of Hardware Jobbers was held at the Rochester Club, Rochester, N. Y., the 18th ult. The following officers were elected: President, Griff D. Palmer, Rochester; vice-president, Henry W. Millar, Utica; secretary-treasurer, Joseph Born, Syracuse. Directors: Hobart Weed, Buffalo; Irving D. Booth, Elmira.

After the business meeting the members present were entertained by their Rochester friends at the Rochester Club.

COMPULSORY EDUCATION.

The action taken by the Associated Shovel Makers at their recent meeting by which jobbers who buy special lines from outside manufacturers are discriminated against by withholding of rebates under certain contingencies, has called forth from one of the progressive outsiders the expression of his views as given in the letter which follows. It does seem a little as though the jobbing trade were asked to assist in the interest of the shovel makers' combine, in stifling elements of competition that were formerly considered by active buyers to be the life of the trade.

CANTON, OHIO, Sept. 29, 1903.

Editor HARDWARE:

DEAR SIR:—Much has been said in the papers about the inconsistency and arbitrary actions of labor leaders and consequent lawlessness of their followers. No one can truly say that everything that has been said is not only too true. But ought not the intelligent business people set them better examples? What can be expected of a lot of uneducated men, who have nothing to lose and everything to gain by an upheaval of our social system and overthrow of our Government, when combines of educated gentlemen of supposed honorable and fair-minded disposition set such examples, as for instance, the Shovel Trust? No worse intimidation or forced boycott is practiced than by this coterie of business men. To force out competition, the wholesalers, known as Hardware jobbers, are compelled to buy only from this Trust, or forfeit all of their rebates that accumulate during a period of 3 or 6 months—as the case may be. These rebates are paid for quantities and depend upon all shovels purchased during a stated period being bought only of members of the Trust. If a single dozen is bought from an outside manufacturer (that is, one not a member of the Trust) such jobber forfeits all his rebates. This leaves the independent manufacturer no alternative than to sell his output to the dealer direct, ignoring the jobber who is tied up to the Combine, entirely. The outside or independent manufacturer has no other alternative, as this clique refuse to recognize any but the original members. Does it not behoove the dealers of the entire country to take a hand in this game of freeze-out and to refuse to buy Trust-made goods? This exclusive Combine must be fought with its own weapons, or the dealer will also soon be dictated to as to what he dare or dare not buy. I repeat, what can be expected of labor leaders, when such examples are set them? True, the Trust does not come at the jobber with a shot-gun and dynamite as labor agitators do, but they attack the jobber's pocket book, and what is life without the wherewithal to live? One method is nearly as bad as the other, as is illustrated by the story of a sailor, who, while on a journey to London was attacked by a foot-pad. When met with the demand, "Hand over your money or I'll blow your brains out," he answered, "Blow away, you land-lubber, I would rather go to London without brains than without money." Let the dealers take the stand indicated and they will soon break this vile conspiracy.

F. E. KOHLER.

LEGAL CORRESPONDENCE.

Any subscriber to "HARDWARE" is privileged to ask any lega question he pleases in this Department and it will be answered free of charge. Address all communications to Law Editor "HARDWARE," No. 309 Broadway, New York City.

PROMISSORY NOTE—INTERNAL REVENUE TAX.

QUESTION: Kindly inform me whether a promissory note requires any revenue stamp, and if so, what amount is required.

REPLY: Under the Internal Revenue law of 1898 a revenue stamp is required on promissory notes. The rate prescribed by law is two cents for every $100 or fractional part thereof, but this law has since been repealed and at the pres-

UNREGISTERED PHYSICIAN NOT ENTITLED TO FEE.

QUESTION: A friend of mine has requested me to ask the following question, and to have the same answered through the columns of your paper:

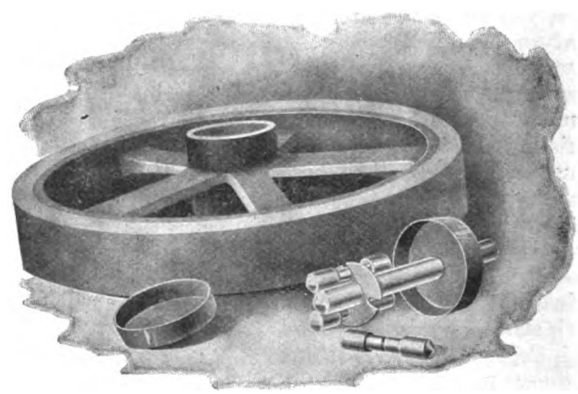
My friend desires to know whether a physician who has failed to register his license, allowing him to practise medicine, is entitled to a fee for any medical services that he may render.

REPLY: There have been one or two decisions of the courts of this State upon the question which is submitted to us. The latest of these decisions we find in the case of Accetta against Zupa, reported in 54 Appellate Division 33. In this case a physician who had obtained a diploma from a university in Naples, and who had obtained a Regent's certificate in this State, authorizing him to carry on the practice of medicine, rendered certain services which he valued at $100 to a patient. He brought suit to recover the same against the patient, who declined to pay the amount, upon the ground that he had failed to register his certificate in the County Clerk's office, as required by the Public Health law. The Municipal Court of the City of New York, in Brooklyn, held that this fact made no difference, and that the physician was entitled to his fee. Upon appeal, however, the Appellate Division, adopting the opinion of the former General Term in the City of New York, held that "it is a settled principle that one cannot recover compensation for doing an act, to do which is forbidden by law, and is a misdemeanor and would compel the payment of the contract price for doing what the law forbid." We are of the opinion that this case is properly decided under the laws of this State, and if a physician has failed to comply with the requirements as to registration in the county where he practices, he would not be entitled to recover any fee for services rendered.

EFFECT OF VIOLATION OF CLAUSE IN INSURANCE POLICY

QUESTION: I had an insurance policy on my house and barn for the amount of $2,000. There is a clause in the policy of insurance which provides that the policy shall be void if mechanics or workmen are employed on the premises for more than fifteen days at one time. I was not aware of this clause being in the policy until it was called to my attention by the insurance agent after a fire had occurred, totally destroying my house and barn. I had been having certain alterations made in the house and the repairs had consumed about twenty days. I should like to be informed whether, in your opinion, the mere fact that I had employed workmen for about twenty days without notifying the insurance company and obtaining their consent, is any reason why I should not be entitled to collect my insurance.

REPLY: The clause which you mention is one that is usually inserted in fire insurance policies. We are of the opinion that the courts of this State would regard this clause as a condition of the policy, which, if violated, would render the policy void. The Court of Appeals of this State recently took this view of a similar clause in an insurance policy, in a case recorded in 57 N. E. R. 475. In this case painters and carpenters had been employed by the insured for slightly over fifteen days making a few alterations upon the insured premises. The consent, in writing, of the company was not obtained, and, after a fire had occurred, the insurance company refused to pay the loss, upon the ground that this condition in the policy had been violated. The insured brought suit against the company and his suit was dismissed by the trial court, and the action of the trial court in so doing was upheld by the Court of Appeals.



PARTNERSHIP—RIGHTS OF PARTNERS.

QUESTION: I have had some difficulty with my partner and believe he has misappropriated some of the firm money. I have asked him to tell me what has become of certain money which I know he collected, but he has refused to give me any satisfaction whatever. Kinkly advise me as to my rights. Could I have my partner arrested?

REPLY: A partner is entitled to have from his copartner an accounting of all the firm's money and property. If you have demanded this and cannot obtain it amicably, we would advise your placing the matter in the hands of an attorney for the purpose of beginning an action against your partner for an accounting. As to the order of arrest for the cause you mention, we are inclined to think that one partner cannot obtain this remedy against the other.

THE SAME IDEA BUT IMPROVED UPON.

We illustrate in this article the latest improvement made in the justly celebrated Roller Bearing, manufactured by the National Sweeper Company, Marion, Ind., and used in National Carpet Sweepers. Three rollers are used as in the past, but they are of smaller diameter, and are cut away in the centers, thus reducing the bearing surface over one-half,

NATIONAL SWEEPER CO.'S ROLLER BEARING.

and giving practically a ball bearing effect with a roller bearing. The ends are turned conical in shape, which reduces the friction considerably over the old bearing, which was more flat on the end. With this bearing, should the rollers work up to the cap, on either end, the only friction possible is on the extreme point, which is about the size of a needle head. This latest improved Roller Bearing is now being put out on all National Roller Bearing Sweepers.

HITTING THE BULL'S EYE.

Secretary A. S. Jones, of the National Rifle Association, announces that Dr. W. G. Hudson won the Laflin & Rand aggregate A special prize, which goes to the competitor making the highest aggregate total of their best scores in each of the following matches: "All Comers," "Hayes," "Gen. E. P. Meany," and "Trophy Match," of the New Jersey State Rifle Association; and "Members' Match," of the National Rifle Association. Dr. Hudson made the total of 263 out of a possible 270 in these matches. He shot Peters 30 caliber Government Smokeless ammunition, which is loaded with the new bullet worked out by the expert riflemen at Sea Girt.

✤

At the Union City, Ind., tournament on Sept. 7th, there was a large gathering of expert trap shooters. Dr. O. F. Britton, of Indianapolis, Ind., won high average. He used Peters Ideal Shells. For the first 100 his charge was 38 grains DuPont Powder, and for the second 100 3 drams of King's Smokeless.

THE ROCKY MOUNTAIN TRADE.

(From our Traveling Correspondent.)

The actual building of two new railways through the Middle Rocky Mountain country, is opening and will open more new country. These two railways when connected at Salt Lake City will cut off about a day's time between Denver and Southern California.

In referring to the demand for general Hardware one of the leading merchants of Salt Lake City said: "You cannot call this a good Hardware country—there is of course a growing demand for builders' Hardware—but for many years the country trade has been almost exclusively, in a very cheap class of shelf Hardware. Of course, there has been and still is a big demand for stoves, tin and enameled ware, which trade is probably larger than that in Hardware."

It is true then that most of the Hardware dealers in this territory are extensive handlers of stoves.

In Ogden there has been no small amount of new building during the past year, and fine brick structures are gradually taking the place of the older wooden buildings. A new brick store and warehouse will be built this winter by Wheelwright Bros., who are large dealers in stoves and kitchen Hardware. In answer to the question "how is trade," Mr. Wheelwright said: "We are very busy, in fact never have been so busy, and our trade is constantly growing. We could do more business now if we could handle it, but are working up to our full capacity."

An up-to-date and attractive window display was recently being shown by the Boyle Hardware Co., of Ogden. It consisted of a large locomotive and tender, about six feet long, and made entirely from Hardware. The Boyle Hardware Company are strong believers in advertising and do not neglect their windows.

During the meeting of the National Irrigation Congress in Ogden, McKown, Richardson & Company had their windows so trimmed that much attention was drawn to this concern's store. It consisted of the figure of a man made entirely of Hardware and tin ware in the act of sharpening an axe on a large foot power grind-stone. Such window displays are good advertisements and prove to the passerby that there is energy and life in the store, behind the window.

Although not handling much in the Hardware line, Browning Bros. Co., of Ogden are very closely allied to the Hardware business, being large dealers in sporting goods, and manufacturing the Browning Patent Automatic Shot Gun. This gun is now being placed on the market in 12 gauge, and is a perfect working repeater, the entire action after loading, being done automatically by the recoil of the shell. There is little doubt but that this new gun will revolutionize the entire gun business of the world.

E. W. Madsen is general manager of the Utah Stove & Hardware Co., of Salt Lake City and when seen by your correspondent said that business was ahead of last year. Continuing Mr. Madsen said: "Twenty-five years ago this business was established as wholesale and retail dealers in stoves, and eight years later was consolidated with a Hardware business and now carry complete stock of both lines. In stoves our business runs very large, we handling about 25 cars a year." M. K. Sims has the reputation of being the best stove salesman in the State and has for some years looked after the outside trade for the Utah Stove & Hardware Co.

An exclusively wholesale house is Clark, Eldredge & Co., of Salt Lake City. Besides a general line of Hardware this concern carry an extensive stock of crockery and are large dealers in groceries—in fact, the firm being one of the old pioneer houses deal in almost everything but dry goods.

There was an air of business activity about the store of the Salt Lake Hardware Co. that plainly spoke of the prosperity of this concern. The rear end of this store was burned during the early summer, but is now nearly rebuilt. To meet the demand of a growing sporting goods business the Salt Lake Hardware Co. will soon occupy the adjoining store which will be used exclusively as a sporting goods department.

One of the most progressive Hardwaremen of Nevada, is E. Schmidt of Reno. In addition to Hardware and stoves a general line of farm and mining tools is carried. The development of gold mining in Nevada and the reclaiming of much arid lands by irrigation is bringing many new settlers into the State and a very marked improvement in the Hardware trade has followed.

The diversity of the line carried in a Hardware store is shown here in Leadville, Colo., in the stock of the Leadville Hardware Co. A very extensive line of stoves and ranges is carried, house and kitchen furnishings, farm and garden tools, guns and ammunition and a most up-to-date line of miners and mining supplies. An extensive business is carried on in this latter line the trade from the Leadville Hardware Co. extending into many parts of the State.

An attractive and well stocked store is that of Thompson Hardware Co., of Leadville. This concern carry a large line of guns and rifles and reported business in a satisfactory condition. There was some complaint in Leadville, however, because of the lack of building at the present time. This of course is due to the dullness in silver and lead mining, but as some new properties are now being developed, it would look as though the future in Leadville would bring as active business as there was a few years ago.

In all the Rocky Mountain country, there is a brisk business being done by the Hardware proper, with possibly the exception of Leadville, which lack of business is due entirely to a local condition.

One of the most attractive Hardware stores in the south central part of Colorado is that of the Merrell Hardware Co. of Pueblo. Although the Merrell Hardware Co. are exclusively in the retail trade, a large outlet is had, as two other stores are operated by this concern. Up in the mining camp of Cripple Creek, the principal Hardware store is that of the Merrell Hardware Co., and this store as well as the other branch at Victor, Colo., is in charge of M. D. Grave. Mr. Merrell said that in some lines business was exceptionally good. "In stoves for example," he continued, "our trade has been very large; in fact we have sold and delivered more already this fall, than we sold last season." The Merrell Hardware Co. were the first store during the strike in Cripple Creek, who refused to meet the demands of the strikers in not selling goods to those who opposed the striking miners. Many of the other merchants have since followed the course of the Merrell Hardware Co. and are of course being backed up by the mine owners.

A very original and clever sign in the shape of a large tea kettle, adorns the top of the building occupied by J. M. Killin & Co. This tea kettle is made from heavy galvanized iron, being about four feet across. "When you buy Hardware, go to the store under the sign of the big tea kettle" is a phrase well known to Pueblo people. Mr. Killin reported business good, and said that there was quite a large amount of new building going on in Pueblo and vicinity.

Another of Pueblo's prosperous concerns is the Holmes Hardware Co. A large window display of guns and rifles was a good advertisement for the Holmes Hardware Co., and because of the unusual number of guns displayed could not help but attract the eye of the sportsmen.

Quite an extensive Hardware business is done by the Colorado Supply Co., which concern is closely allied to the Colorado Fuel and Iron Co. The Hardware end of the business is looked after by Wm. H. Billington who is assistant general manager of the Supply Company.

The Pueblo Hardware Co. is one of the oldest concerns in the city and make a specialty of builders' Hardware. A line of sporting goods is also carried. This concern is now carrying a line of machinist supplies, and in fact all the Hardwaremen of Pueblo are working into this line as the demand is constantly increasing as the city is fast becoming one of the big manufacturing centres of this Rocky Mountain country. The Colorado Fuel & Iron Company's monthly pay roll now is nearly $400,000. With its great natural advantages, and splendid railroad connections, Pueblo is very likely to become the Pittsburg of the west.

One of the largest, wealthiest and most progressive Hardware concerns of the Rocky Mountain country is the George Tritch Hardware Co. of Denver, Colo. The salesmen of the George Tritch Co. are known in four States, the firm working the trade closely in Colorado, Wyoming and New Mexi-

Digitized by Google

co. In addition to the concern's large jobbing trade a very good retail business is carried on, especially in sporting goods, which department is in a separate store adjoining the main building. In speaking of trade conditions Geo. Tritch the corporation's secretary said: "We have no fault to find with business as it is this fall—with us, our trade is constantly growing. In all lines the trade in this country is enlarging, due to the fast development of the country, and the Hardware men generally are having their full share of business due to the fact that merchants in this line are constantly enlarging the variety of stock carried."

The Dillon Hardware Co. occupy a large warehouse on 15th St. and are one of exclusively wholesale Hardware houses of Denver. The business was established in 1878 and incorporated in 1898 with John J. Dillon as president and treasurer, and F. W. Heckendorf, secretary. This concern makes a specialty of heavy Hardware, iron and steel, as well as blacksmith's and wagon maker's supplies. A very extensive line of iron and steel goods is carried by the Dillon Hardware Company.

The present owners of the Denver Stove & Hardware Co., are endeavoring to sell the business and good will. This concern has for some years enjoyed a large wholesale trade and the business has grown since George A. Bushnell, a few years ago, took up the management. Mr. Bushnell is considered one of the best posted Hardware men of the west.

A large double store is occupied by the George Mayer Hardware Co., and one of the most complete and best assorted Hardware stocks to be found in the State fills the store. In speaking of trade conditions Mr. Mayer said that there had been much new building in Denver during the spring and summer, and that the outlook was good for fall and winter trade. A splendid line of cutlery is carried by the Geo. Mayer Co. and very attractively arranged in a large plate glass case. This case is directly in front of the main entrance to the store and is so arranged that one entering the store cannot fail to see this line.

One of Denver's energetic Hardware concerns is Frank A. Ellis & Son. In addition to general Hardware a very complete stock of sporting goods is carried. In fishing tackle Ellis & Son do a large business both at retail and wholesale. As fly fishing is by far the most popular way of getting trout in Colorado, a large business is done in artificial trout flies. These goods have always been difficult to show, (because of the large variety of patterns and sizes of hooks), without taking up a very large amount of show case room. Mr. Ellis it is, who has devised a scheme which takes but little room and shows the flies in the best possible manner. An upright case was made being about 7 feet long, 3 feet high and only about 12 inches deep. Upright pigeon holes were filled into this case, which hold about a dozen cases upon which the trout flies are mounted. These pigeon holes range backward and upward one behind the other; and being low enough so that the flies protrude above. The glass front of the case slides upward, thus enabling a customer to pick out the flies desired. In the store of Ellis & Son this case was fitted into an unused place in front of the office, and makes a good addition to the store fixtures. The only complaint heard from any of the Denver trade was a falling off in the gun and ammunition business, being caused by the shortening of the open season. All things considered the Hardwaremen of the Inter-Mountain States are in a very prosperous condition.

Hammernail.

M. S. BENEDICT MFG. CO.

M. S. Benedict Mfg. Co., East Syracuse, N. Y., are sending to the trade an envelope size pamphlet describing and illustrating their new "Monterey Pattern" Quarter Century Silver Flat Ware. This pattern is something entirely new which has just been completed, the design having been patented by the Benedict Co. The booklet gives a very good idea as to the quality and beauty of this pattern, and the company guarantee it for 25 years, with ordinary family use. Also included in the contents of the pamphlet is a page devoted to "The Use and Care of Silverware" which contains some very useful information. The last page gives list prices of the different articles in Monterey Pattern.

"MONTEREY PATTERN" TEA SPOON.

WINNING GOLDEN OPINIONS.

The Adams-Baker Merc. Company.
General Merchandise.
Hiawatha, Kan., Sept. 25, 1903.

Century Cash Register Co.,
Detroit, Mich.

Gentlemen:—

We are in receipt of the 23d inst., and glad to know that the two additional registers have been shipped and that they will probably reach us before Oct. 1st.

The first register we bought of you has been very satisfactory, we having tested in every way we could think of, and have always found it to be accurate, and capable of doing the work that other machines costing several times as much could do.

Our telegraphic order of the 21st inst. for two additional machines for use in our store indicates more forcibly than words what we think of your register.

Yours truly,
The Adams-Baker Merc. Company.
By C. B. Baker, Secy. and Treas.

The Century Cash Register referred to by this active merchant is advertised elsewhere in our columns, to which the reader is referred for full information regarding its many advantages. It is considered by those using it to be "a mechanical bookkeeper" as it will register sales 365 days in the year for 25 years without resetting to zero, or can be reset to zero every day if desired, in a moment.

THE NEW GOVERNMENT CARTRIDGE.

The new 30-40 Government cartridge manufactured by the Peters Cartridge Co., was tested with much satisfaction at the Sea Girt Meeting. This cartridge is charged with what is known as the Hudson-Hayes Bullet, constructed on the suggestions offered by the expert riflemen at Sea Girt. Captain W. F. Whittemore during the meeting scored 16 out of 18 bulls eyes at 600 yards with this ammunition. It was used in a number of the contests. It won first place in the General E. P. Meany match, the Consolation match, and tied for first place in the New Jersey State Trophy match. The smokeless revolver ammunition also was successful. Thomas Anderson won the Military Record match, with the .38 S. & W. Peters smokeless cartridge. He also won the Pistol Championship match with Peters .22 long rifle cartridges. Both of the shuetzen matches were won with King's Semi-Smokeless powder.

A gentleman should always remember that he is not beyond criticism.

NEW GOODS AND SPECIALTIES.

UNION RACER AND HOCKEY SKATES.

In the new illustrated catalogue of skates, recently issued by the Union Hardware Co., whose New York office is in charge of Tower & Lyon Company, 95 Chambers Street, there are a number of skates shown deserving especial attention from the dealers handling this seasonable product, they having been greatly improved and strengthened over last year. In Fig. 1 is shown the Swedoh racer, which has runners made

FIG. 1.—SWEDOH RACER SKATE.

of finely tempered tool steel, set longitudinally in a diamond shaped tube formed entirely of one piece of metal, having no brazed or soldered end in front, where the greatest stress comes. This skate is provided with a steel ball, consisting of two parts, one attached to each side, as required by the rinks for safety. This skate is intended to satisfy a demand for a light racing skate, which shall be strong and fast. The cups which support the foot plates are made to clasp the diamond tube, to which they are rigidly brazed. They can be

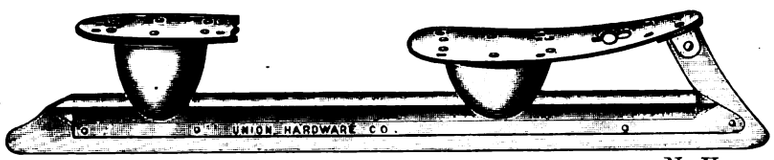

FIG. 2.—SWEDOH HOCKEY SKATE.

furnished with 14-inch runners, 10 and 10½ inches long; 16-inch runners, 10½ to 11½ inches long, by half inches, and 18-inch runners in sizes 11, 11½ and 12 inches, all the runners being 1-16-inch thick. The same principles apply to the Swedoh hockey skate shown in Fig. 2, except that the construction is heavier throughout for the severe work required of it, there being no front steel ball. The sizes are 10½ to

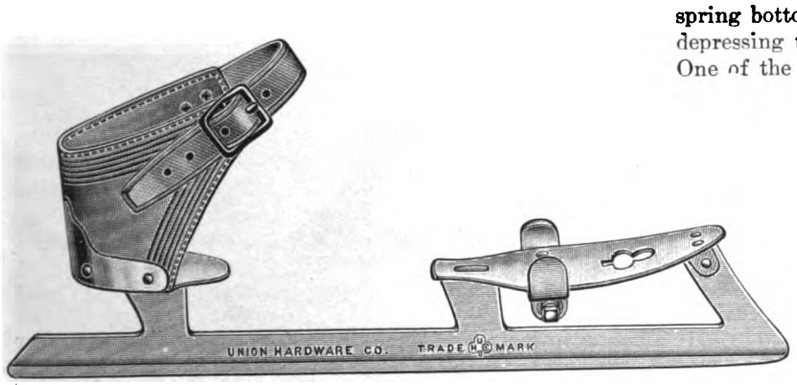

FIG. 3.—LADIES' HOCKEY, WITH FLANGED BLADE AND BACK STRAP.

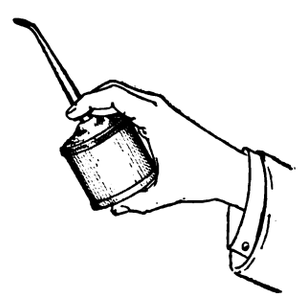
12 inches, inclusive, by half inches. Fig. 3 is a ladies' hockey skate, No. 65, having flanged or ribbed blade, the leading new characteristic of which is the full back strap. This strap is of best quality of oak tanned russet leather, morocco lined. The runner is made of the best grade of welded steel and iron, full polished and finely nickeled.

AUTOMATIC SELF-FEEDING STEEL OILER.



Notwithstanding the number of Oilers of all kinds already on the market, it is evident there is still room for one which, while possessing all the advantages of those with which it competes, has still considerable up-to-date merits of its own. The Rochester Automatic Oiler and Supply Co., Rochester,

METHOD OF FILLING OIL.

N. Y., are placing upon the market through the Hardware and supply trade the Rochester Automatic Oiler, the salient features of which the accompanying illustrations sufficiently indicate. It is a self-filling steel oiler made from 20-gauge cold rolled "Swedoh" steel and is copperized to prevent rust. With the automatic oiler, the spout is depressed, forcing out the air and causing a vacuum; the end of the spout while so depressed, is inserted in the oil and it is at once forced into the can, taking the place of the air ejected. It is impossible to over-fill this can, therefore no waste of oil, and no greasy oiler.

When oil is desired, it can be had in the usual way by the spring bottom, or if a quantity is desired, you can, by again depressing the spout, force the oil entirely out of the oiler. One of the features easily appreciated is the fact that noth-

ing can go into the oiler except through the spout, the smallest part of the oiler. There can be no stopping up of spout, as flies, shavings and lint cannot be taken in. Whatsoever goes in must come out, as the pressure on the bottom forces it out. A large variety of these oilers are made with straight or bent spouts, with large opening for heavy oils or small opening for light or medium weight oils. One feature to which attention is called is that the spring bottom on these

Digitized by Google

oilers is neither soldered or brazed as there is nothing but the steel to work on. They also make them with no spring bottom, the body and bottom being of one gauge of metal, with these oilers the oil is had by depressing the spout. With all these solid bottom oilers the well and bottom are of one piece of metal with no spring bottom. This permits the bottom to be constructed of the same gauge metal as the body. When using heavy oil it can be forced out by depressing the spout as shown in Fig. 2. This is a decided advantage for automobile use. A full and complete catalogue of these goods may be had for the asking by addressing the manufacturers.

BARNEY & BERRY'S ICE SKATES.

Barney & Berry, Springfield, Mass., in their complete catalogue recently published, and to which editorial reference was made in a late issue, lay particular stress upon the fact that the lock lever ice skates formerly made with plain blades only are now made with ribbed blade, as will be noticed in the illustrations given herewith, and also added to their line of hockey skates. This valuable addition to the attractive features of this well-known skate has greatly increased its popularity with the trade already identified with the sale of this large line. In Figure 1 is shown the Lock Lever Skate, with ribbed blade, a bottom view being given in Figure 2. The skate is adjustable sidewise on any style or shape of shoe, the two-threaded screw B shortening the separable clamp, allowing clamp D to open wider than at C, thus bringing the skate nearer the inner side of the shoe. When the skate is adjusted to any particular shoe and set for use, the rotary movement of the main adjusting screw is locked by a small set screw in the stud at A, which prevents any loosening of skate in use and keeps it ready to attach to the same shoe without readjustment. The skate is made in sizes 9 to 12 inches inclusive, increasing by ½ inches, in Grade 3 only, polished and nickeled.

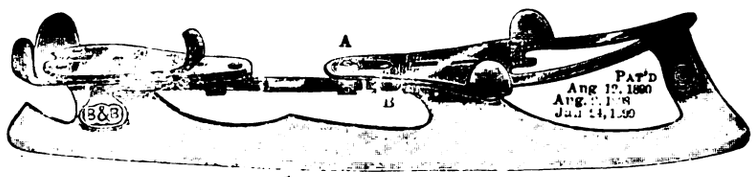


FIG. 1.—LOCK LEVER SKATE.

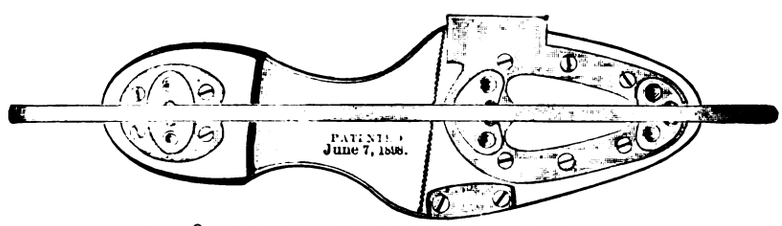

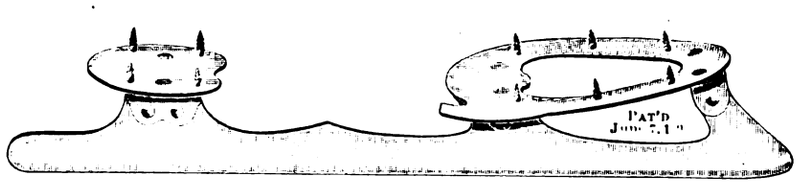

FIG. 2.—BOTTOM VIEW OF LOCK LEVER SKATE.

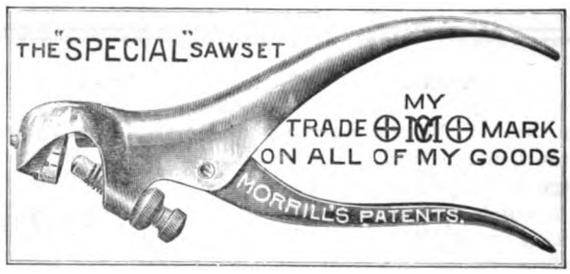

RIBBED HOCKEY SKATE.

This style can be furnished in a narrower plate for ladies if so ordered. In Figure 3 we give an illustration of the ribbed Hockey Skate furnished with patent safety edge fastening, the popular sale of which has created a record for this class of skate.

MORRILL'S "SPECIAL" SAW SET.

Chas. Morrill, of 277 Broadway, New York, of Sawset fame, has added to his already long list of Sawsets the "Special," of which we present an illustration. This is an improved No. 95 Sawset and contains a number of important features.

The anvil instead of being placed at right angles to the path of the plunger as in the No. 95 Sawset is inclined as in the No. 1 Sawset. This does away with breaking the point

of the plunger as it permits the plunger to be made larger and stronger, and to be more evenly tempered. It also permits the workman to see how much set he is getting on his saw. The under handle has been made the movable handle, thus doing away with the wobbling of the Sawset and minimizing the motion, thus preventing the accidental breaking of any of the saw teeth. The gauge screw regulating the width of set is firmly secured in any desired position by means of a lock nut. This is a great improvement as in the past the wearing loose of the gauge screw has caused a great deal of annoyance and inconvenience to the operator. The whole Sawset has been somewhat shortened and the graceful contour of the previous models has been preserved. The encasing of the plunger prevents the dust and dirt from accumulating and clogging up the spring and presents a more handsome appearance.

The action is similar to the No. 95 Sawset. The operator simply has to know the number of points to the inch of his saw, turn the revolving anvil to the corresponding figure, and set the gauge screw as desired, in general just enough to permit the saw to go through easily. Then it is a case of simply going down one side of the saw setting the alternate teeth, then reversing the saw and setting the other teeth in the opposite way.

Mr. Morrill has been to work on this Sawset for several years and during that time has taken out a number of patents covering all of the features, but not up to this time has he felt that he had brought it to as high a state of perfection as possible.

THE MYERS UNIVERSAL REVESIBLE SLING PULLEY.

The new device to which we referred in our previous issue as having been put upon the market by F. E. Myers & Bro., Ashland, Ohio, is illustrated by the use of the series of

FIG. 1.—MYERS' UNIVERSAL SLING PULLEY.

cuts given herewith. It forms one of the most useful appliances that can be used with any make of Hay Carrier, without a change of fork, pulley or the use of a registering head. In Fig. 1 the side or edge view of the sling pulley is shown, illustrating the reversible feature and the tripping device which extends from either side. As shown in Fig. 3, the regular fork pulley that is used with the carrier is passed down through the sling pulley and then attached to the end of the sling, the sling pulley itself being attached to the opposite end of the sling. When the bundle is compressed, the fork pulley passes up against the sling pulley, tripping it, which dislodges the entire center section of the sling pulley and permits the fork pulley to pass through, thus compressing the bundle, as shown in Fig. 4. The dotted lines and arrow describe the movement of the center of the sling pulley after the fork pulley has come in contact with the trip.

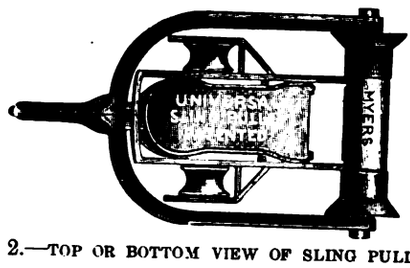

FIG. 2.—TOP OR BOTTOM VIEW OF SLING PULLEY.

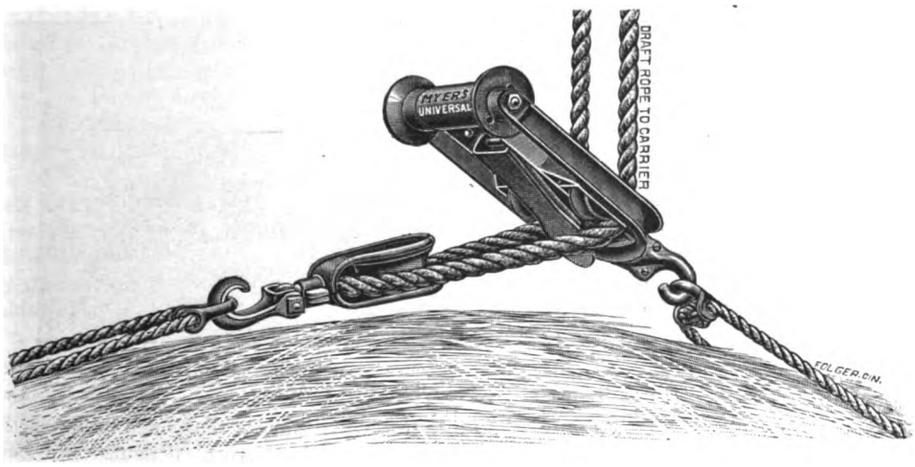

FIG. 3.—SLING PULLEY IN PLACE BEFORE COMPRESSING THE BUNDLE OF HAY.

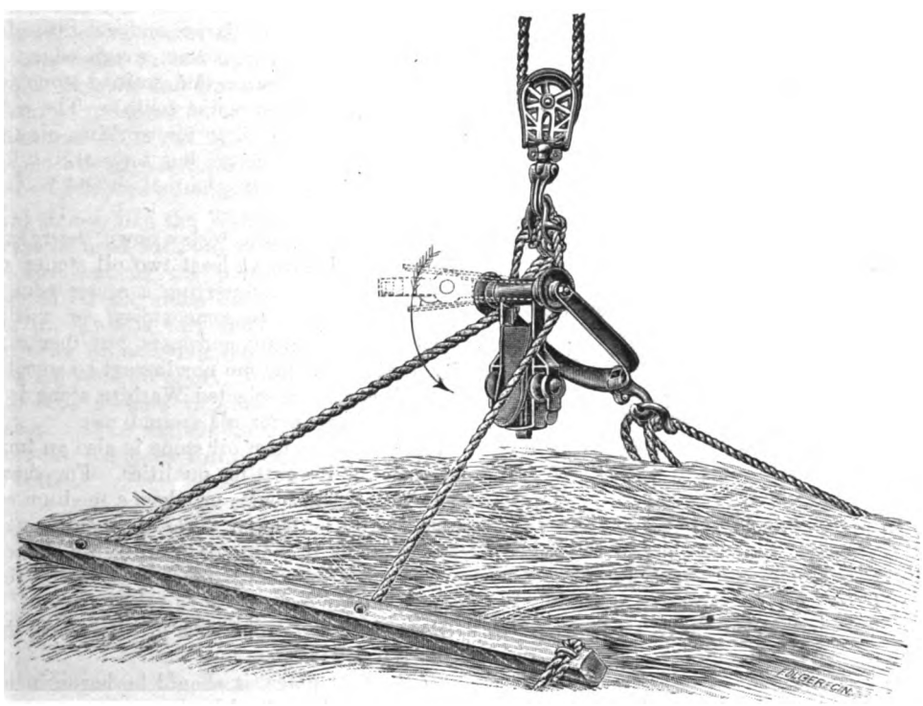

FIG. 4.—POSITION OF PULLEY WHEN BUNDLE HAS BEEN COMPRESSED.

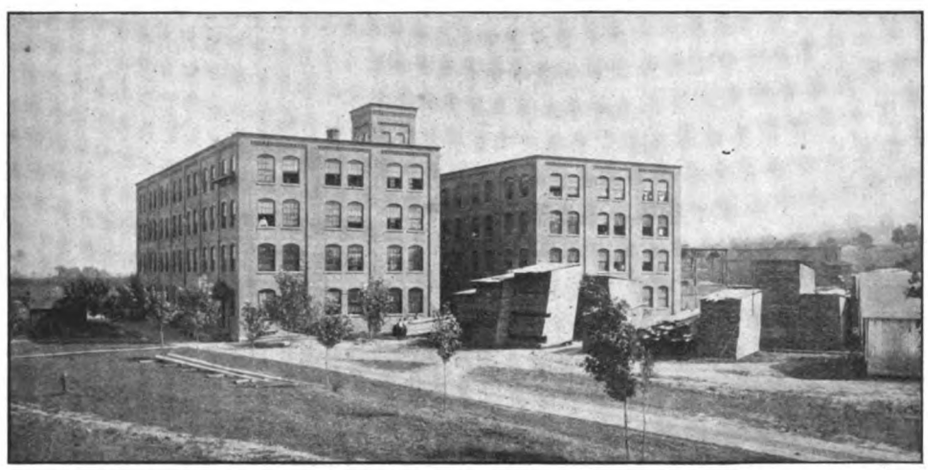
STREET AND STORE LIGHTING



The White Mfg. Co., of 192-194 Michigan Avenue, Chicago, have compiled one of the most complete catalogues of Lighting devices that are strictly up-to-date.

They will esteem it a favor if our readers will write for their latest catalogue, which is now ready for mailing. Special inducements are being offered to the Hardware merchant who will take up the sale of their lamps in their county, being given absolute protection. The first one applying for the agency will be the one selected.

BLACKSTONE MANUFACTURING CO.

We present herewith an illustration showing the present plant of the Blackstone Mfg. Co., devoted to the manufacture of Washing Machines. This business was established by the late W. A. Blackstone in Bluffton, Ind., in 1871. It was incorporated as the Vandergrift Mfg. Co., in Jamestown, N. Y., in 1881, and was succeeded last March by the Blackstone Mfg. Co. The present officers of the company are: George V. Blackstone, president; Andrew J. Lind, treasurer; John T. Moynihan, secretary. The company is engaged in the manufacture of various kinds of Washing Machines, the principal machine, however, being the new Blackstone Rotary Washer, which is claimed to be the lightest running, strongest and most perfect rotary washer placed upon the market. It can be operated by turning the balance wheel either way, backward or forward, and is geared to run faster than any similar machine.

BLACKSTONE MANUFACTURING CO.'S PLANT.

The company employs from 80 to 100 men; the total acreage occupied is seven; the floor space is 75,000 square feet. The buildings of the company are among the finest factory structures possible to build. The insurance men declare the plant the most perfect wood-working establishment in Western New York. The buildings shown in the engraving are of twin construction, four stories in height, and 60 by 150 feet each, and are made of shale brick.

The business of the company embraces the trade throughout the country and even extends to all quarters of the habitable globe. The business, which is now entering upon its 21st year, has had a healthy and conservative growth. It always has been, and still is, one of the prominent concerns of the city.

George V. Blackstone, the president, was born in Pittsburgh, Pa., in 1860, and came to Jamestown in 1880. Mr. Andrew J. Lind, the treasurer, was born in Denmark in 1850. He has traveled extensively, and is held in high esteem by the company for his many years of faithful and intelligent service. Mr. J. P. Moynihan, the secretary, was born and reared in the city of Jamestown, and has been connected with the company for the past seven years.

HOW TO SELECT AND USE OIL STONES.

It is generally conceded that one of the most important articles in a mechanic's kit of tools is a thoroughly reliable oil stone, for it is well-known that in order to do good work a mechanic must have keen edged tools and must keep them in that condition. It is not every mechanic, however, who fully understands how to select the best stone for the purpose, or, after securing one, how to employ it in a way to produce the most satisfactory results. Bearing upon these points are some very timely suggestions contained in a little pamphlet some time ago issued by The Pike Mfg. Co., of Pike, N. H. It contains so much of value along the line indicated that we reproduce herewith their comments on the question of selecting oil stones and also what they have to say in regard to the proper method of using them:

The first point to be considered in selecting an oil stone is the purpose for which it is required. Many mechanics make the common mistake of expecting one oil stone to answer all purposes. It would be just as reasonable for a carpenter to use a coarse tooth saw on fine cabinet work as to expect a coarse grained, fast cutting oil stone to impart a fine razor edge.

The kind of an edge imparted by a stone depends upon the size of its grains of grit, or crystals. In a coarse grit stone these grains are large, and cut deep, far apart furrows in the tool, leaving a coarse, rough edge. Such stones cut away steel faster than a fine grained stone (as a coarse tooth saw cuts faster than a fine tooth). The coarse edge left by such a stone is all right for working pine or soft woods in which the cells are large, but for working hard wood, or for any kind of fine work, the tool should be finished on a finer grained stone.

It is therefore safe to lay down the rule that a good mechanic should have at least two oil stones, one for grinding down dull tools or imparting a coarse edge and another for finishing. There are some stones of medium grit which answer well for many purposes, but they cannot cut as rapidly as the coarse stone nor impart so smooth an edge as the fine. A carefully selected Washita stone is the best general purpose oil stone for all around use.

The hardness of an oil stone is also an important factor in determining its cutting qualities. For sharpening ordinary tools with broad blades or edges a medium soft, fast wearing stone should be chosen. For sharpening narrow chisels, engravers' tools or pointed instruments, however, it is necessary to use a very hard stone, as otherwise the stone will soon be cut full of grooves or furrows.

Regarding the proper use of oil stones, the pamphlet contains the following:

In the first place, it should be borne in mind that a good oil stone can be ruined by improper usage or lack of care. Many stones are condemned when the fault lies either in not having selected the right stone for the work or in not having taken proper care of it. The mechanic who expects one oil stone to grind down his dull nicked tools and at the same time impart a keen, razor edge, using any kind of oil that happens to be at hand, leaving the dirty oil on the stone to

Digitized by Google

dry in, leaving his stone around in the dust and dirt of the shop, will never have a good oil stone and does not deserve one.

No sensible carpenter will think of using other tools in this way, yet many of them treat their oil stones in just this manner. Many times have we seen oil stones returned to dealers with the complaint that they would not "cut," when, as a matter of fact, they were completely coated or varnished with dried, dirty oil and steel dust, in such a manner that the tool could not possibly come in contact with the grit or "teeth" of the stone.

There are three objects to be attained in using and caring for an oil stone: First, to retain the original life and sharpness of its grit; second, to keep its surface flat and even; third, to prevent its glazing.

To retain the original freshness of a stone, it should be kept clean and moist. To let an oil stone remain dry a long time or expose it to the air tends to harden it. A new stone should be soaked in oil for several days before using, and if kept in a dry place (most of them are) it should be kept in a box with closed cover and a few drops of fresh clean oil left on it.

To keep the surface of an oil stone flat and even simply requires care in using. Tools should be sharpened on the edge of the stone, as well as in the middle, to prevent wearing a trough shaped depression. It is impossible to prevent a stone becoming slightly hollowed from long usage, but this can be remedied by grinding the stone on the side of a grind-stone, or rubbing it down with sandstone or an emery brick.

To prevent an oil stone glazing the user must first understand what causes a stone to glaze. This can best be explained by showing why oil and water are used on sharpening stones and how they should be used.

The words "oil stone" have come to be applied to all stones used for sharpening mechanics' tools, from the fact that it is necessary to use oil on most of them for two purposes: First, to prevent the stone from heating the tool, which draws its temper and ruins the best tool instantly; second, to keep the particles of steel ground off the tool from entering the pores of the stone, which would soon fill them up and cause a glazed surface.

Most coarse grained and all soft stones can be used successfully with water, although they may be generally termed oil stones. On such stones water should be used plentifully to carry off the powder rubbed up by the tool. Most water stones are quick cutting and leave a coarse edge, but a much finer edge can be procured on the same stone by using just enough water and oil to rub up a paste. This paste when kept on the stone will give a finishing edge, but should be thoroughly cleaned off before putting the stone away.

Fine grained, hard stones, like the Washita, Arkansas and Turkey, should always be used with oil, as water is not thick enough to keep the steel out of the pores. The dirty oil should always be wiped off the stone thoroughly as soon as possible after using it. This is very important, for if left on the stone the oil dries in, carrying the steel dust with it, and thus soon causes the stone to glaze. Cotton waste is one of the best things to clean a stone with and is nearly always to be found in a shop. Some carpenters use shavings, but they are very apt to leave the stone full of dust. A common clean rag would be better.

HARDWARE PATENTS.

The following list of Patents, Trade Marks and Designs of interest to the Hardware trade were furnished by Davis & Davis, Solicitor of American and Foreign Patents, Washington, D. C., and St. Paul Building, New York City.

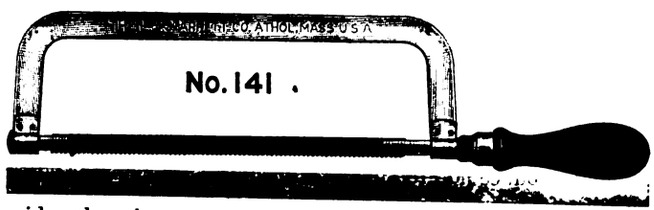
PATENTS EXPIRED SEPT. 21, 1903.

349,295. SASH FASTENER, E. H. Alvord, Seattle, Wash.
349,386. SAFETY GUARD RAZOR, T. F. Curley, Brooklyn, N. Y.
349,493. KNOB ATTACHMENT, J. W. Day, Chicago, Ill.
349,490. COMBINED RASP & FILE, J. T. Gallagher, Chicago, Ill.
349,496. WIRE CUTTER, R. Hayden, Haddam, Conn.
349,618. LANTERN, E. F. Steck, Chicago, Ill.

PATENTS EXPIRED SEPT. 22, 1903.

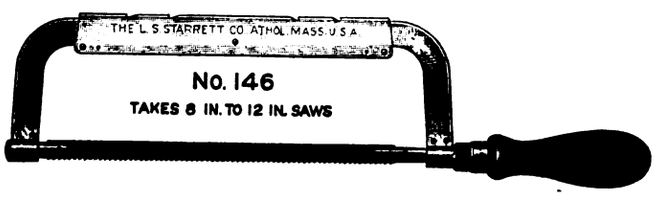
739,300. TRANSOM LOCK, O. A. Essig, Canton, Ohio.
739,309. COMBINED STEP AND EXTENSION LADDER, E. L. Harmon, Sheraden, Pa.
739,371. KNIFE, A. S. Allen, Brookline, Mass.
729,388. AUTOMATICALLY EMPTYING CUSPIDOR, A. M. Carter, Dennison, Ohio.
739,486. EGG BEATER, L. M. Galatius and N. R. Minor, New York, N. Y.
739,534. RAZOR STROP, W. H. Doss, Benton City, Me.
739,606. SCREW DRIVER, S. F. Kemm, Franklin, Pa.

PATENTS EXPIRED SEPT. 28, 1903.



349,684. CARPET SWEEPER, M. R. Bissell and W. J. Drew, Grand Rapids, Mich.
349,703. RAKE, H. Fisher, Canton, Ohio.
349,698. LIFTING JACK, J. W. Donohue, Frankfort, O.
349,768. OIL CAN, G. Trubel, Macomb, Ill.
349,877. WEATHER STRIP FOR WINDOWS, ETC., G. W. Everett, New York, N. Y.
349,897. BROOM, W. A. Nixon, Maple Rapids, Mich.
349,915. KNOB ATTACHMENT, G. Van Winkle, North Plainfield, N. J.

PATENTS ISSUED SEPT. 29, 1903.

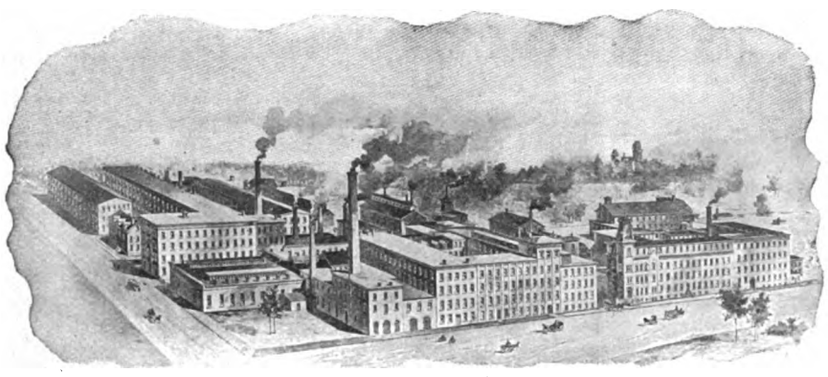


739,807. KNIFE CLEANER, D. Appleton, London, England.
739,928. RAZOR STROP HOLDER, T. G. Riordon, Chicago, Ill.
739,931. WEATHER STRIP FOR SASHES, J. E. Scott, Louisville, Ky.
739,989. FISH TRAP HOOK, C. O. H. Cook, Auburn, N. Y.
740,049. MONKEY WRENCH, S. F. Shifley, Versailles, Pa.
740,068. CLOTHES DRYER, E. J. Williams, Salt Lake City, Utah.
740,118. SHEARS SHARPENING DEVICE, R. F. Goodfellow, Chicago, Ill.

STARRETT HACK SAW FRAMES.

L. S. Starrett Co., Athol, Mass., are the makers of the Hack Saws of improved quality and design, illustrations of which accompany this article. No. 141, Fig. 1, is provided with a solid steel frame made very stiff, the stock in the same being

wider than is commonly used, and it cannot be cramped by straining the blade. The saw may be set to cut in either of four directions and tightened by simply turning the handle. It is handsomely polished and nickel plated. No. 146, Fig. 2,



possesses the good qualities of the Saw above described, and in addition is provided with an improved adjustable back which permits of its taking in 8, 9, 10, 11 or 12 inch Saws when necessary. It is claimed by the makers that it will be found more than usually meritorious, considering the moderate price at which it is marketed. An admirable catalogue of high grade tools may be had upon request by addressing the manufacturers and asking for catalogue No. 17.

REMINGTON HISTORY.

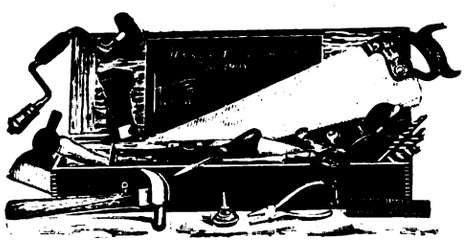
At Ilion, Herkimer County, N. Y., which is 83 miles west of Albany, is one of the largest private gun manufacturies in the United States, known as the Remington Arms Co., and remarkable for its extent and for its origin; the story of which has been told as follows:

On Steel's Creek, about 3 miles from the site of the armory, dwelt the founder of the business, Eliphalet Remington, who, desiring a rifle for his own use, forged one in 1816 at his father's forge with no other tools, except such as an ordinary blacksmith's shop contains and conveyed it to a gunmaker at Ithaca to have it fitted and completed. The gunmaker was much pleased with the skillful construction of the barrel, and Mr. Remington, perceiving the high estimation in which his workmanship was held, dexterously applied his knowledge to a profitable use and commenced the manufacture of gun barrels, and not long after this incident the banks of Steel's Creek blazed with the cherry fires of many forges, and the surrounding hills rang with the joyous music of many anvils.

REMINGTON ARMS CO.'S PLANT.

The old factory, however, was found to be too distant from the line of transit—then the Erie Canal—and in 1829 Mr. Remington purchased a farm at Ilion, upon a portion of which, on plans supplied by himself, the plant was erected. For many years the business was limited to the fabrication of gun barrels, but having received a large contract from the U. S. Government for arms, the manufacture of Rifles and Carbines, including all their parts, was embarked in and has since been very successfully prosecuted.

From that day to this the business has increased so enormously that the works now occupy about 18 acres of ground, and consist of 60 buildings, the floor space amounting to nearly 400,000 square feet, and over three hours are required to merely walk through and casually inspect the various rooms and departments. The company employs about 1000 hands, mostly skilled mechanics.



The result which usually attends the unwavering determination to produce nothing but good mechanism, combined with a genius for improvement and invention is illustrated in the growth, progress and extent of these works. The company is by far the largest manufacturer of double barrel shotguns in this country, if not in the world, and in addition produces military and sporting rifles, both single shot and magazine patterns in great numbers. The extraordinary success achieved by the Remington Arms Company is attributable to its extensive experience covering a period of 87 years, to the high and honest standard of workmanship the spirit of progress, and the adoption of latest manufacturing methods, all of which enables them to produce and sell superior firearms, giving the consumer greater value than other manufacturers not so well equipped.

CAN YOU MAKE A PERFECT SCORE?

The J. Stevens Arms & Tool Co., Chicopee Falls, Mass., are distributing a unique and ingenious puzzle printed in several colors on cardboard, and denominated "Can you make a perfect score?" which can be solved after a careful study devoted to it, but only in accordance with the following rules: With seven coins, cover seven of the eight targets. Place a coin on the target at the stock of any one of the eight rifles, for example, "Stevens" Ideal Walnut Hill, No. 49. Now, move it along to the target at which the rifle is aimed, allowing it to remain there, thus scoring one. Then place another coin on one of the targets at the stock of one of the remaining seven rifles, moving it along to the target at which that rifle is aimed, allowing it to remain there, thus scoring two. In this manner proceed with the remaining five coins, covering seven of the eight targets. They say if you can do it, you certainly are a "crack" shot. It can be done! And the Stevens is the only Rifle that can do it. The company announce their willingness to mail this puzzle to any applicant upon the receipt of two 2-cent stamps.

THE "HANDY" TOOL CHEST.

Among the special Tool Chests that have recently been added to the varied assortment made by the American Tool Chest Co., 200 West Houston Street, New York, we present an illustration of the "Handy" Tool Chest No. 1903, which has been gotten up on a demand by the trade for house and farm use, and has promptly proven its popularity. The chest is 27 inches long, 8 inches wide and 4 inches deep, constructed of bass wood with dove-tailed corners, and provided with an inside partition. Eighteen of the more serviceable tools, of a superior quality, constitute its equipment. The tools comprise a panel saw, iron block plane, bit brace, four auger bits, nail hammer, rule, cutting pliers, hatchet, screw driver, spirit level, screw wrench, saw file, oil stone and oil can and set of 10 awls and tools. The company manufacture a large and most complete line of tool chests, with and without tools as required, intended for the use of boys, youths, amateurs and professionals, and well adapted for the holiday trade.

THE "HANDY" TOOL CHEST.

'TIS TRUE, 'TIS PITY, AND PITY 'TIS, 'TIS TRUE.

A philosophic German addressing his dog, said: "You vas only a dog, but I vish I vas you. Ven you go mit de bed in, you shust durn round dree times und lay down. Ven I go mit the bed in, I haf to lock up the blace, und vind de clock, und put de cat oud, und undress myself, und my vife wakes up and scolds me. Den de baby cries und I haf to valk him up und down; den maype ven I shust go to sleep, it's time to get up again. Ven you get up you shust scratch yourself a couple of times und stretch, und you vas up. I haf to quick lite de fire, and put de kittle on, scrap mit my vife already, und maype get some breakfast. You play all tay and haf plenty of fun don't it. I haf to work all day und haf plenty of drouble. Ven you die, you's dead for sure; ven I die I haf to go to hell yet."

RECENT TRADE PUBLICATIONS.

Stransky & Co., 9-15 Murray Street, New York, have just published their No. 15 catalogue of steel ware, which is stated as being made in over three thousand different American shapes and sizes, and in ten different colors, besides an endless variety of decorations, stripes and bands. The ware is distinctly different in appearance and quality from all domestic wares Every article in their catalogue can be furnished in any color. The goods are sold by them at a fair price and for import only—no stock being carried in New York, and no orders accepted from jobbers, so that the dealer is certain no one else in his town can obtain the goods and cut prices. Each piece is guaranteed to wear five years. This catalogue would make a valuable acquisition to the catalogue library of any dealer.

The Challenge Wind Mill & Feed Mill Co., Batavia, Ill., are presenting to the trade a general catalogue of galvanized steel mills, galvanized steel towers, gasoline engines, feed mills, pumps, tanks, etc. Regarding their "Dandy" steel mill they claim that this is the finest, strongest, safest, most reliable and most durable mill on the market, because nothing but the very best of material is used and the construction of the mill is such as to give it strength and durability. For the vane and the slats in the wheel they use cold-rolled sheet steel, and the balance of the wheel and vane is either angle or flat bar cold-rolled steel. The wheel is braced from both directions by steel bars, thereby making it rigid and strong. Each slat is supported by two cross bands of steel bar, beside a bracket that supports and braces the slat its entire width, thus tieing the wheel together and bracing and supporting it in such a manner as to defy the storms. The "Dandy" has been improved in many ways since first being put on the market. This mill is invariably galvanized, and is geared back to make two and one-half revolutions of the wheel to one stroke of the pump, thus making it run easy and light, requiring but little wind to do the work. The above firm are also the manufacturers of the Dandy steel towers, Challenge pumping and geared sectional wind mills, Daisy and O. K. solid wheel pumping mills, pumps, tanks, feed mills, corn and cob crushers, sweep grinders, shellers, feed cutters, wood saws, horse powers, etc.

E. C. Atkins & Co., Indianapolis, Ind., are sending to their patrons a very handsome and unique booklet entitled "Some of the good points of the Atkins Inserted Tooth Saws," which, open, indicates the appearance of a circular saw, and to that extent is novel and ingenious. The semi-circular pages are extremely attractive from the fact that the highest half-tone art is utilized in the formation of the various designs which represent points of interest in the construction of the Saws, to the exploitation of which various pages are devoted. A fine view of the factory is given, showing the plant in all its dimensions, and the company say in regard to the Atkins Inserted Tooth Saw, which is one of the finest circular saws they manufacture, "We manufacture a great many different styles of holders and teeth, each style being peculiarly adapted for its special purpose." This description of Saw insures smooth lumber because the gullets in the saw blade are milled exactly central and each bit and holder is accurately fitted to this milling in the sockets. Every bit is ground exactly to gauge, with even swage on either side. Every stage through which one of these blades passes is claimed to be of their own patented process, and "accuracy" is the watchword from start to finish. A portion of the book is devoted to the testimonials of these Saws which are spoken of in the most commendable manner.

The Michigan Stove Co., Detroit, Mich., are printing for the use of dealers, large display banners, having on them a picture which represents a No. 550 Garland stove with a fire burning in it. In large red letters is printed "The Wonder of the Age." It makes a very attractive sign.

The Challenge Wind Mill & Feed Mill Co., Batavia, Ill., have distributed through the trade some large posters displaying their many productions, such as the X-Ray and Dandy wind mills, pumps, feed mills, lawn swings, etc. The background of the poster is sky-blue, the windmills, extending the entire length on either side are of silver, and the frame work of the feed mills are red with the metal part painted green, and the whole presents a very artistic color effect.

The Blacklock Foundry Co., South Pittsburgh, Tenn., have issued a 4-page folder exploiting their reversible cast iron shoe lasts and stand and dog irons. Their shoe lasts and stands are made in seven numbers from No. 1 to No. 7 ranging from a 15-inch to a 24-inch stand, and the folder gives dimensions, weight and price of each number. The dog irons are made in six sizes, weighing from 10 to 40 lbs. The length, height and price of each of the dog irons is also given.

The Chicago Flexible Shaft Co., Chicago, Ill., have recently issued an envelope size booklet of 14 pages having for a cover an attractive picture of a young couple comfortably enjoying a carriage ride while snow is on the ground. Above the picture is inscribed "From misery to pleasure." All this indicates that inside the carriage is a Clark's carriage heater, which heats the feet, and so makes you warm all over. According to the Chicago Flexible Shaft Co. this only costs you a half a cent an hour because a cake of Clark coal, which costs but six cents, lasts sixteen hours, a third of a cake being plenty for usual use. The company state: "No flame, no smoke, no odor, no gas, just heat—that's all, but plenty of it." They guarantee their heaters to be and to do all they claim for them, and a guaranty goes with each box of coal, and it means just what it says. The heaters are made in several styles, but they claim that the cheapest are just as strong and effective as the handsomer styles.

Windhorst & Co., 4 North 12th Street, St. Louis, Mo., have recently gotten out an envelope size catalogue and price list of their "Primo Light and Sundries." The little booklet contains illustrations of the various gasoline vapor lights which they manufacture and carry in stock at all times ready for prompt shipment. Their line consists of gravity and air pressure arc lamps, as well as gas machines and hollow wire systems. The Windhorst Company are among the largest manufacturers of their kind, and have the facilities for doing any special work in gasoline apparatus for both lighting and cooking. They use the best materials obtainable in the manufacture of their product and fully guarantee all of their goods.

The Canada Corundum Co., Ltd., Toronto, Can., have recently sent to their customers a cardboard folder which has eighteen samples of their Craig Mine Crystal Corundum glued on small pieces of blotting paper to show the different sizes. The only way in which their Corundum is sold is in grain form. Craig Mine Corundum is 98 per cent. corundum, and is free from emery and all impurities and will cut cold and fast. The source of their supply, Craig Mine Mountain, is estimated (Ontario Government report, Bureau of Mines), to have in sight several millions of tons of merchantable corundum, which can be obtained only from the Canada Corundum Co.

Cablegram to
President Roosevelt,
Oyster Bay.

American Rifles, AMMUNITION and Men won victory to-day over Great Britain, Canada, France, Norway, Australia and Natal, and bring back Palma trophy.

(Signed) Lieut. Albert S. Jones,
Secretary of the National Rifle Assn. of America.

Copied from N. Y. Herald.

This SWEEPING VICTORY for America, and the extraordinary score of 1570 out of a possible 1800 were made with 30/40 regular factory Cartridges, manufactured by the

UNION METALLIC CARTRIDGE COMPANY

selected after exhaustive trials, by the entire American Team in preference to all others, for their wonderful uniformity and extreme accuracy.

SCORES ARE IMPROVED BY USING U. M. C. AMMUNITION.
SOUVENIR CARTRIDGES (Without Powder) ON APPLICATION.

THE UNION METALLIC CARTRIDGE CO.

313 BROADWAY, NEW YORK CITY.

Factory, Bridgeport, Conn. Depot, 86 First Street, San Francisco, Cal.

HEAVY HARDWARE JOBBERS NATIONAL UNION.

The Heavy Hardware Jobbers' National Union held their annual meeting at the Grand Pacific Hotel, Chicago, recently. The membership being well represented. Many matters of trade interest were discussed in executive session. President Gregg presided, with Secretary W. C. Brown in his customary place. All the old officers were re-elected, as follows:

President—J. A. Gregg, of Nicols, Green & Gregg, St. Paul, Minn.

Vice Presidents—Henry Seefeldt, Suelflohn & Seefeldt, Milwaukee; F. B. Bonniwell, Bonniwell-Calvin Iron Company, Kansas City, Mo.; H. E. Treadway, John Ernsdorff Iron Company, Dubuque, Ia.

Executive Committee—Robert E. Brier, Beck & Corbitt Iron Company, St. Louis; C. A. Kimbark, S. D. Kimbark & Co., Chicago; Henry B. Hunter, Shadbolt & Boyd Iron Co., Milwaukee; J. S. Halliday, Wm. J. Halliday & Co., Indianapolis; Charles E. Faeth, Faeth Iron Co., Kansas City.

The following firms were represented at this meeting: The Baum Iron Co., Omaha, Neb.; Beck & Corbitt Iron Co., St. Louis, Mo.; Bonniwell-Calvin Iron Co., Kansas City, Mo.; Campbell Iron Co., St. Louis Mo.; Cummings & Emerson, Peoria, Ill.; The Robert Donahue Iron & Hardware Co., Burlington, Ia.; The John Ernsdorff Iron Co., Dubuque, Ia.; The Faeth Iron Co., Kansas City, Mo.; Wm. J. Halliday & Co., Indianapolis, Ind.; Kelly-How-Thomson Co., Duluth, Minn.; E. D. Kimball & Co., Chicago, Ill.; S. D. Kimbark Co., Chicago, Ill.; Jos. F. Meyer Co., Houston, Tex.; Moore Hardware & Iron Co., Denver, Colo.; Mossmann, Yarnelle & Co., Ft. Wayne, Ind.; Nicols, Dean & Gregg, St. Paul, Minn.; Paddock-Hawley Iron Co., St. Louis, Mo.; John Pritzlaff Hardware Co., Milwaukee, Wis.; Richards & Conover Hardware Co., Kansas City, Mo.; The G. B. Schulte Sons Co., Cincinnati, Ohio.; Shadbolt & Boyd Iron Co., Milwaukee, Wis.; The Sieg Iron Co., Davenport, Ia.; The Sioux City Iron Co., Sioux City, Ia.; Sligo Iron Store Co., St. Louis, Mo.; Suelflohn & Seefeld, Milwaukee, Wis.; Thompson-Hoof Co., Chicago, Ill.; Van Camp Hardware & Iron Co., Indianapolis, Ind.; The Williams Hardware Co., Minneapolis, Minn.

THE AMERICAN STOVE COMPANY.

The American Stove Company held their second annual meeting at Mt. Clemens, Mich., recently. The following directors were re-elected to serve during the ensuing year:

Directors: A. E. Ambs, John Ringen, E. C. Baxter, C. I. Dangler, D. Ed. Dangler, C. A. Stockstrom, E. H. Stockstrom, Louis Stockstrom, Geo. F. Fiske, F. L. Alcott, W. H. Boardman, Geo. M. Clark, H. J. Trenkamp, Henry Trenkamp, Sr., O. P. Moon, Paul Schneider and Kenneth K. McLaren.

The officers who were re-elected were as follows:
President, C. A. Stockstrom, St. Louis, Mo.
Secretary, H. J. Trenkamp, Cleveland, O.
Treasurer, Geo. T. Fiske, Chicago.
Vice Presidents, George M. Clark, F. L. Alcott and E. H. Stockstrom.
General Manager, Cleveland District, F. L. Alcott.
Master Mechanic, Cleveland, Paul Schneider.
General Sales Manager, E. H. Stockstrom.
Assistant Manager, Cleveland District, O. P. Moon.

✤

Casey (the stone mason)—Phwat's the how below?

Cassidy (the hod carrier)—Shure, English Jim just fell from the second flure t' the basemint.

Casey—Thot's an Englishman fur ye. Shure, it was two hours ago I told him a joke, an' it's took him all this toime to tumble.

REVIEW OF THE MARKETS.

WIRE NAILS. A fair business is being done in this staple line, although orders are not extravagantly large, conservative estimates on immediate requirements being the rule. The mills are fairly busy, and the market well maintained. Quotations are as follows: f.o.b. Pittsburgh, 60 days, or 2 per cent. discount for cash in 10 days:

Jobbers, carload lots	$2.00
Retailers, carload lots	2.05
Retailers, less than carload lots	2.15

New York. The unsettled labor conditions exert an influence on the general trend of local trade, affecting sales on leading lines. The demand, however, is a steady and regular one. Quotations being as follows:

Single carloads	$2.20
Small lots from store	$2.25 to $2.30

CUT NAILS. Only an ordinary demand seems to prevail, orders being light, and small lots the rule, the market not being as firmly held as usual, although September prices at the recent meeting of manufacturers were affirmed for October delivery. Quotations remain as previously quoted:

In carload lots	$2.15 base
Less than carloads	2.20

F.o.b. Pittsburgh, plus freight in Tube Rate Book to point of destination. Terms: 60 days, less 2 per cent. off in 10 days.

New York. The market is a moderate one, not especially active, the demand being for nominal quantities. Quotations are as follows:

Carloads on dock	$2.29
Less than carload on dock	2.33
Small lots from store	2.40

BARB WIRE. Very satisfactory business is referred to with every indication of an excellent demand being possible throughout the entire season, the market being a firm one. Quotations are as follows: f.o.b. Pittsburgh, 60 days, or 2 per cent. discount for cash in 10 days:

	Painted.	Galv.
Jobbers, carload lots	$2.30	$2.60
Retailers, carload lots	2.35	2.65
Retailers, less than carload lots	2.45	2.75

SMOOTH FENCE WIRE. Orders are being placed freely, while specifications already booked for future delivery are extremely satisfactory. Quotations are as follows: f.o.b. Pittsburgh, terms 60 days, or 2 per cent. discount for cash in 10 days:

Jobbers, carloads	$1.90
Retailers, carloads	1.95
Less than carloads	2.05

The above prices are for base numbers, 6 to 9. The other numbers of Plain and Galvanized Wire take the usual advances, as follows:

		Plain.	Galv.
6 to 9		Base.	$0.30
10	Advance over base	$0.10	.30
11	" " "	.10	.30
12 and 12½	" " "	.15	.30
13	" " "	.25	.30
14	" " "	.35	.30
15	" " "	.45	.60
16	" " "	.55	.60
17	" " "	.70	1.00

PRIMERS. Union Metallic Cartridge Company, Bridgeport, Conn., and 313 to 317 Broadway, New York, have recently announced a revision in the list prices and discounts on Primers and Caps. Present quotations are as follows:

U. M. C. Primers.

All kinds for Black Powder, Nos. 0, 1, 1½, 2 and 2½, with anvil, in quarter boxes, per thousand, $2 ..... 20 and 5%

Nos. 1 and 2, in tenth boxes, per thousand $2 ..... 20%

All kinds for Smokeless Powder, Nos. 3, 5, 6, 6½, 7, 7½, 8½ and 9½, in tenth boxes, per thousand, $2 ..... 20%

Berdan Primers.

Nos. 1, 1½ and 2, in quarter boxes, per thousand, $2 ..... 20 and 5%

B. I. Caps.

For Sturtevant Shells, in tenth boxes, per thousand, $2 ..... 20%

CORDAGE. The quotations on Manila Rope have been strengthened by the demand which continues good, with prices on first quality Cordage firmly held. Quotations representing the market are as follows:

Pure Manila, 7-16 inch and larger	11¾@12
½ inch	12¼@12½
¾ inch and 5-16	12¾@13
Pure Sisal, 7-16 inch and larger	9½
No. 2 Sisal, 7-16 inch and larger	8¼
½ inch	8¾
¾ inch and 5-16 inch	9¼
Lath Yarn, Medium and Coarse	8¾
Jute Rope, No. 1	6½
No. 2	6

LINSEED OIL. The following quotations on "City" Raw Oil are those announced by the Dean Linseed Oil Co.:

In lots of less than 5 barrels...40 cents per gallon.
In lots of 5 barrels or more....39 cents per gallon.

The "American" brand for respective quantities, 2 cents per gallon less.

The five barrel price applies only to deliveries of that quantity at one time.

Boiled Linseed Oil, 2 cents per gallon higher than Raw.
Calcutta Oil ..... 65 cents per gallon.

THE PHILADELPHIA TRADE.

Fall trade may now be said to have fairly commenced, although the weather is more like Summer, and it seems more like vacation season than time for active work. Goods, however, appear to be in active demand, and trade is keeping up remarkably well while the goods shipped are going directly into consumption, and we do not believe that stocks throughout the country are at all heavy. The labor agitation of the last few months is having some effect on business, and we hear complaints in some sections of slow trade due to this cause. There are some localities in which building seems to have been suspended, and there are very few plans on the way for the future. In our own city the textile strike has come to an end, and the strikers are returning to work without having gained any advantage by the great loss in wages, but as they are once more at work wages will again find its way into circulation, probably to the betterment of business. Prices continue without important changes. Manufacturers are still claiming that the high price of labor and material prevent them from announcing any declines, and, while raw material is quoted lower in the papers we see little or no indication of it in every day business. Collections are not so good as usual, and this is probably due to the loss of wages, but we hope this cause will soon be removed, and that with every one again at work there seems to be no reason why we should not have a good Fall trade. From the West comes most encouraging reports of abundant crops, and a large demand for goods. The South is also buying heavily, and with the first cold winds there should be a demand for winter goods which will stimulate trade greatly. Biddle Hardware Co.

Digitized by Google

THE CLEVELAND TRADE.

The depression in business is much less than the action in Wall Street would cause one to suspect. The radical decline in stocks caused hesitation and restricted trade, but reflection brought assurance that the country still lives and is not entirely dependent on the stock market. Losses have been severe but business houses are not seriously effected through the timidity of their customers. It is remarkable testimony to the solidity of the country when such immense losses can occur and so feebly effect business generally. There is a perceptable gain in business in the past few days that indicates the waning influence of its effect, and a recovery of faith and sanity. To have foreseen what has happened, would have created a panic, but time has steadied the nerve and is restoring confidence. What has happened may tend to divorce speculation and business, so that each must support itself. If gamblers were compelled to live off of each other, they would resemble the ass snuffing up the east wind for sustenance.

THE CINCINNATI TRADE.

The condition of trade here is far more encouraging than at last writing. The retail Hardwaremen have taken a new lease on life and declare they will never be discouraged about the present or future outlook of trade again. Farmers coming into our store said Mr. J. L. Wayne, told hammering tales about crops in their neighborhood, but we find where one locality is bad another is good so the average which we rely on is all right. The Jobbers are busy. Mr. Bahlmann of The Kruse & Bahlmann Hardware Co. said: "We are away ahead of last year and trade in serviceable goods now is good, while the orders sent in are not for large quantities there are many of them coming both by mail and through our traveling salesmen." Mr. Berger of The Kruse Hardware Co. said: "We are much ahead of last year's business and orders are still coming in better than we anticipated." He told an interesting incident apropos of Farmers reports on crops. My liveryman, he says, wanted corn and went over to Indiana to buy, he struck a farmer with 6,000 bushels in his cribs, and he said he would take 3,000 bushels of it. The farmer said it was worth 60 cents per bushel but he had none to sell, but would lend his neighbors if any are short."

Mr. E. Bertram Pike, Secretary and Treasurer of The Pike Mfg. Co. of Pike Station, N. H., is on his way to Cincinnati, Louisville, Chicago and St. Louis on a business trip.

J. H. Bruning has sold out his Hardware store in Covington, selling his stock at less than cost as advertised but getting the regular prices on most all the stock. He will devote his time to the roofing business.

Cincinnati Trade Association.

THE COLUMBUS TRADE.

The writer is in the harness again after a four weeks' vacation. I can't say that it was a vacation of rest as I was physically more tired on my return than when I left, but that kind of "tired" does not wear one out. It is the continual hum-drum of business worry that does a man up. Columbus is a big city, but not quite so big as Pittsburgh, Philadelphia and New York. I am, however, satisfied with Columbus and was glad to get back. We get along fairly well with street cars on the surface here but in New York they have to build street cars on the surface, in the air and under ground. We have the advantage of New York in the way of ornaments. Here we have telegraph poles, street car poles, telephone poles and a few million wires to look at on every street, while in New York they put all wires under the ground. New Yorkers have no idea how pretty snow and ice looks on the wires in winter time, and the pretty flashes of electricity when a trolley slips off, is another thing they miss. During a fire here, if the building is too hot to lean a ladder against, firemen can just rest ladders against the convenient wires and squirt water in the second or third story. You no doubt are aware that we have but few 26-story buildings here. I had two experiences at Atlantic City that I don't care to go

through again. The first one was with the mosquitoes the first night after my arrival. My wife said we would not dare go to the dining room as the other guests would certainly think we had the smallpox. Well those mosquitoes certainly did have a picnic. They drilled holes in the top of my head (hair is a little scarce there) every 1-32 of an inch. I am hopeful that a hair will come out of each hole and I will have the thickest head of hair in the country. I told the landlord, it was screens in the windows or we would vamloose the ranch. We got the screens. It is a remarkable fact that not a hotel in Atlantic City has screens either in doors or windows. They say mosquitoes do not bother them only when they have visitors from Ohio or a land breeze. There must have been a land breeze the first night we were there. The other experience was the cyclonic disturbance of the great storm. I confess that I as well as every body else was frightened. It was certainly about five hours of awful suspense. It seemed that almost everything was loose or liable to be any minute. Ladies grabbed their husbands (or somebody's else husband) around the neck for consolation. As my wife is pretty brave, I escaped. Had she known how badly I wanted a little consolation about that time, I know she would have done as some others did. A man has to be brave when a woman rushes to him for protection. Fortunately no one was killed on land. The sight of the ocean as the waves dashed on the beach well repaid us for our fright. I felt like the darkey. however, that I would rather be on "Terra Cotta" than out in a boat. I found on my return that business had not lagged any during my absence, nor had there been many changes in prices. While Iron and Bolts are lower, some other lines have advanced. So far, I can see there is nothing in the way of an unusually good trade for the rest of the year. Hanna and Johnson are keeping the political pot boiling. Both sides are victorious now, but I think when the ballots are counted it will turn out that Uncle Mark "knows his business."

THE SMITH BROS. HDWE. CO.
J. H. Smith.

THE OMAHA TRADE.

The prospects for Fall trade are fairly good and we see no reason why the volume of business should nit be equal to the average. In many localities the crops are better than last year and largely above the average. Too much rain has shortened the crops on the low ground, but this is not sufficient to effect the general average. Prices for farm produce are unusually good with the exception of live stock on which some complaints are being made that prices are unsatisfactory. The volume of business compares with that of previous years and there appears to be nothing to indicate anything but a continuance of the present very satisfactory condition throughout the balance of the year.

WRIGHT & WILHELMY CO.

THE DAVENPORT TRADE.

The anxiety is almost over. If the frost does not appear by the time this letter is printed, the corn crop in this section of Iowa will be safe and there will be harvested a fair crop, fully an average. The cold wave of two weeks ago fortunately passed to the north of us; dealers immediately began to feel more hopeful; the bright sunshine and high south winds rapidly maturing the crops had a noticeable stimulating effect on trade, as expressed in larger and more frequent orders, forcing the footing of the sales columns of the Hardware trade far above those of the last half of September, 1902. There is decidedly a better feeling than has existed for several months. Confidence seems wholly restored and there is no perceptible reason why the last quarter of the year should not show a handsome increase over that of a year ago. TheIowa State Jobbers' Association met on the 23d ult. and was well attended. The new crop is beginning to move, resulting in a very favorable improvement in collections.

SICKELS, PRESTON & NUTTING CO.

THE SAN FRANCISCO TRADE.

It has been usual at this season of the year to announce that the midsummer lethargy has been succeeded by the regular Fall movement, but now it is eminently proper to say that there has been no "midsummer lethargy" on the Pacific Coast this year, and that notwithstanding this omission the usual smart Fall trade movement of later years is now in evidence to a degree that is, if anything of a change, more satisfactory than usual

"Congratulate Rulofson" was the usual salutation HARDWARE correspondent met with on visiting the trade this second day of October. It had reference to a Supreme Court decision that became known this morning, whereby Alfred C. Rulofson, manager and buyer for Baker & Hamilton, Hardware department, and president of the Pacific Coast Hardware and Metal Association, is now in a fair way to secure a considerable share of a $100,000 estate that has been in litigation several years. The claims of Mr. Rulofson had been rejected by the executor for the estate and the lower court had sustained the objection. Now the Supreme Court has expressed a different opinion and sent the case back for a rehearing.

The J. A. Baxter Hardware Company, of Watsonville, California, has placed itself prominently among the expansionists in the trade. It has taken over to itself the considerable Hardware and paints stock heretofore carried by the Otto Stoesser Hardware, Agricultural Implements and Paints Company, and is having its large consolidated stocks located in a modernized structure, one of the most substantial brick buildings in Watsonville.

Up in the Puget Sound district of the coast the Seattle Hardware Company is also preparing for increased trade confidently expected. The company has purchased a new location on First Avenue South, 120 feet deep, extending 233

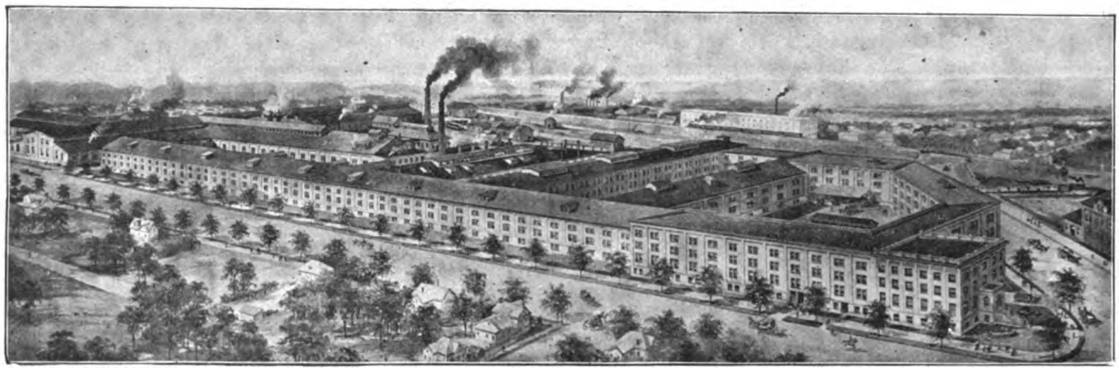
feet to Railroad Avenue. And on this, said C. H. Black, a prominent member of the Seattle Hardware Company, "we will have constructed our new building the first of the coming year. The details of the building are not yet decided upon but it will be a structure of five stories adapted to the needs of our business."

INDUSTRIAL PRESS ASSOCIATION.

THE PITTSBURGH TRADE.

Travelers are sending in plenty of orders. They say people need the goods and order freely, that the stock market scare has not reached the small towns and only once in a while a man objects to ordering for that reason. If bottom can be found soon in the value of stocks and a steady market established, the stir in large cities over this matter will pass and the small trade will continue good without interruption. September sales were ahead of 1902 which was a record breaker and October is going at the same pace. A Merchants Association has been organized in Pittsburg to promote the interests of our city in merchandizing. Especial attention will be given to getting quicker service from railroads in shipments, also offering inducements to the trade to visit our city. This work has been neglected by our merchants and if well done should bring good results.

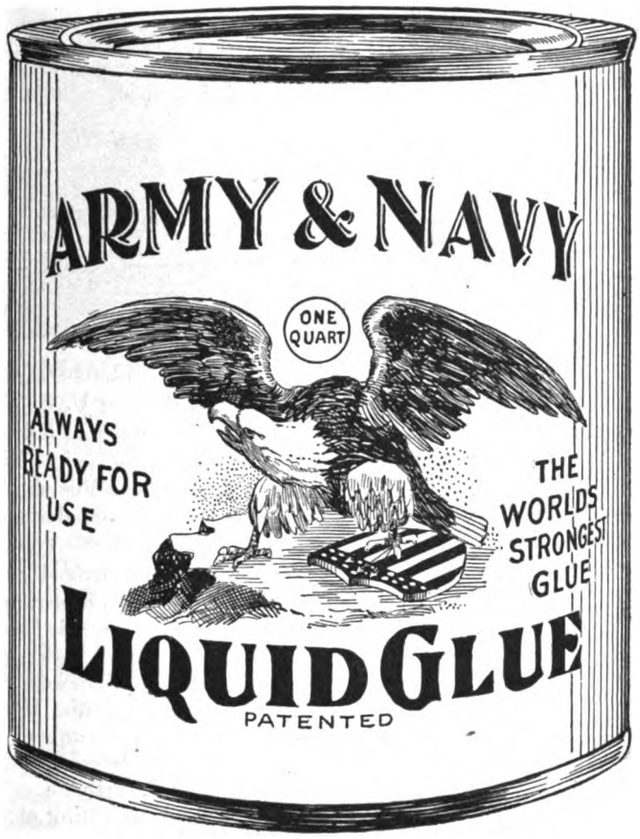


LOGAN-GREGG HARDWARE CO.

DAVIS SEWING MACHINE CO.'S PLANT.

We present herewith an illustration of the large plant of the Davis Sewing Machine Co., at Dayton, Ohio, which, with the extensive additions recently completed, may be regarded as one of the finest and most complete factories in the country devoted to the manufacture of Sewing Machines for domestic use. It is difficult to appreciate the actual magnitude of this establishment in the necessarily reduced size of this picture, and the absence of surrounding buildings with which it make comparison also fails to give an adequate understanding to the observer.

The total amount of floor space in the buildings shown is eleven and one quarter acres. All of the buildings of the main plant are four stories in height. The foundry is one of the largest in the West, equipped with two large cupolas, having a melting capacity of fifty tons of iron daily, and the entire foundry has the most modern equipment of traveling cranes, automatic moulding machinery and everything necessary for the most economical and most perfect results.



DAVIS SEWING MACHINE CO.'S PLANT.

The steam and power plant of the factory is entirely new, of the most modern type, generating 1000 H. P., which is electrically distributed to the different parts of the different shops. The entire plant is heated with steam, lighted by electricity and equipped with eleven large freight elevators.

The machine tool department is provided with more than 1000 automatic machines of special design, many of which have been designed and built in the company's factory to especially meet their requirements. The number of different departments included in the plant is adverse; among which will be found a large wood working factory provided with the latest machinery of every description for such work; japanning, annealing and varnishing departments, all provided with the best type of steam heated ovens; polishing and nickel-plating departments where small parts receive their brilliant finish, large building with furnaces for case hardening and annealing, a plant in which gas is manufactured for these ovens and furnaces. Large rooms filled with hundreds of highly skilled mechanics and specialists are employed in assembling and rigidly inspecting all parts of the work. The packing and shipping departments occupy necessarily a large amount of room. The new office building is fire proof, being built of brick with concrete floors.

The capacity of this company's plant has been multiplied several times during the past few years, and for the first time since the era of prosperity dawned on this country, the company is now able to state that it is in position to meet promptly the present demands for its products.

THE MINNEAPOLIS TRADE.

It has been a long time between—letters. It has been largely on account af the writer's absence, vacations, and partly being very busy and something of a feeling of uncertainty as to what the round-up of the crops were going to be. At one time had we written we would have stated that matters were unusually favorable. Again it would have been a very gloomy letter on account of the excessive amount of rain during a critical period before the farmers had got through with their shock threshing, done their stacking and secured their hay. Then the doubt as to how badly the corn was affected by lack of usual hot weather and early frost. At this writing all of this is pretty well out of the way, and while we have been having more rain, we have had really enough clear and bright weather to get the farmers by the critical part. Although great damage can be done from now on if there is not a let-up. We would say at this writing that the prospects were neither very good or very bad. We think merchants generally have reasons to complain of considerably lighter business than last year and less than had been hoped for and expected. We are rather inclined to think that the jobbers in particular will suffer to some extent. You see we have been getting a gradual increase in business each year for a number of years and now to have a season with a shrinkage in the volume of business hurts. As far as we personally are concerned, we have no reason to complain, as our total business so far this year shows a little increase over last year. Prices generally are fairly well maintained. We hear some complaints, but as a general proposition things are moving along quite smoothly.

W. K. Morison & Co.

LOWENTRAUT'S HOCKEY SKATES.

P. Lowentraut Mfg. Co., Inc., Newark, N. J., John H. Graham & Co., 113 Chambers Street, New York, sole sales agents, have just issued their catalogue of Ice Skates for the coming season in which their exclusive line is well illustrated and described, embracing in the assortment U. S. Club Skates in 11 different styles from $1.00 to $4.50 list price, per pair—also the U. S. Racer listed at $6.00 per pair. A full line of 8 styles of ladies' club skates is shown from $1.25 to $5.50 list, per pair. The Lowentraut Company include in their extensive line the "Columbia" and "Eureka" club skates, the most popular moderate price brands among those now on the market. The U. S. Club and ladies' skates are also made with flanged runners. A line of Hockey skates with flanged and plain runners, and U. S. lever-locking Hockey Skates are included in the assortment, showing 7 styles with and without flanged runners. One of the most successful styles of Hockey skates, an illustration of which is shown herewith, is the U. S. Key-locking Hockey skate with plain and flanged runners, which are also made with narrow toe and heel plates, suitable for ladies' shoes. With these skates they furnish an extra outside interchangeable clamp with each skate, fitting any shape and centre on one-sided or bull-dog shoes.

Craig Mine Crystal Corundum

CRAIG MINE CRYSTAL CORUNDUM is as uniform as the coins of the realm. It excels the irritatingly uncertain abrasives produced elsewhere, even as the coinage fresh from our modern mint excels the hand-made money of Alfred the Great. Nature made Craig Mine Crystal Corundum. It is all the same in physical qualities; a testimonial in favor of one pound testifies in favor of the whole output.

Craig Mine Crystal Corundum grains are numbered 12, 14, 16, 20, 24, 30, 36, 46, 54, 60, 70, 80, 90, 100, 120, 150, 180 and 200. Find the number that suits your work and continue ordering it.

HARDWARE SPECIALTIES AS A LEADER.

I have been requested by the retail Hardware dealers as a representative of manufacturers of Hardware specialties to express my views in regard to the retail trade making specialties as a leader.

The retail dealer, as a rule, is slow in keeping his eyes open for profitable lines in which he can make the most profit. What if your competitor in business does sell a dozen kegs of nails or a ton of barbed wire at ten cents a hundred pounds profit. If you can sell a single hand saw, hatchet, hammer or any one of a dozen other articles that are of standard manufacture in the same time that it takes him to sell the nails or wire you will have made as much profit in dollars and cents as he has, and with far less expense on your part in handling the goods that you do. To be sure your sales may not be so large, but your profits will show up to better advantage and that is what counts. You can make a wonderful difference in your business by pushing profitable goods such as are not found in the catalogue houses all over the country. Let the goods that barely pay a sufficient profit to cover the cost sell themselves and put your energy into selling specialties, which admit of a better margin and do not cost so much to handle. You may have to do a little more talking to get them introduced among your trade, but that costs you nothing when you consider the profit you are making out of them. Then when you consider that the article you are selling is of the best offered on the market and will give the most satisfaction to your customers and, on account of the push and energy you have put forth in selling an article, you have succeeded in developing and building up a trade on that particular article that will stay by you, you have the satisfaction of seeing your labor highly rewarded. You profit largely in taking a brand of goods that your competitor refuses to take hold of, because it has not been on the market quite as long as some other brand that require no talk to sell.

It is essential to the dealer that the brand of goods he sells, whether saw, hammer, or chisel, shall be of a high quality, with a guarantee from the manufacturer, and in this progressive age the dealer only profits himself when he sells that brand of goods that is liberally advertised by the manufacturer. His trade once established, he is sought after and he finds himself advertised among the consumers as the man carrying the best brands of goods the market affords. —*G. W .Gladding, in Stove and Hardware.*

TRADE NOTES.

Newark, N. J.—Increasing business has made an extension to the plant of the Atha Tool Company, imperative, and in order to secure the "elbow room" needed the concern recently purchased a tract of ground across from where the present works is located, and in the near future will erect two new buildings. A power-house will go up at once, and in the Spring a machine shop will be built. That will conclude the building operation for the present, but it is the intention of the company eventually to do only the forging on the ground now occupied by the plant, while the finishing will all be done across the street, in buildings to be erected sometime in the future. The company already has about as much ground occupied by the buildings of its plant as the new tract comprises. When the new power house is finished, electricity will be used as power instead of steam. All the shafting lines will be connected with motors instead of large belts. The company has not yet decided whether to purchase a new engine or to make use of the one now generating power for the plant. It will require a 500-horse power steam engine to run the motors. The Atha Tool Company is composed of the following: President, Benjamin Atha; treasuer, Henry C. Atha; secretary, Edward Ingalls, and superintendent, John Hausman.

New Castle, Pa.—The Baldwin-Graham Stove plant of the Pittsburg Stove & Range Company will be enlarged at once. The plant now employs 110 men and the value of its annual produce reaches $150,000.

THE HISTORY OF BABBITT METAL.

An erroneous idea appears to prevail in regard to the invention of Babbitt metal, says the *Metal Industry*. Although Isaac Babbitt was the inventor of the method of using soft metals in journal boxes, his patent specification makes no claim on the alloy itself, but simply on the method of holding the soft metal in place.

Isaac Babbitt was born in Taunton, Mass., on July 26, 1779. He learned the trade of goldsmith, and in 1824, in his native town, made the first britannia ware produced in the United States, but this enterprise proved unsuccessful. He then removed to Boston and entered the South Boston Iron Works, and in 1839, while an employee of this establishment, he produced the invention which has perpetuated his name. For this invention he was given a gold medal from the Massachusetts Charitable Mechanes' Association, and afterward Congress granted him the sum of $20,000 as a reward. In 1844 the invention was patented in England and in 1847 in Russia. After devoting some time to the production of metals he engaged in the manufacture of soap, so that his name has become almost a household word. He died insane at the McLean Asylum, Somerville, Mass., on May 26, 1862.

The fact that in the patent specification no claim is made for the alloy is sufficient to dispel the ordinary belief in this direction. Britannia metal, pewter or an alloy of tin, 50 parts; antimony, 5 parts, and copper 1 part are recommended. The latter alloy is somewhat softer than that now known as "genuine Babbitt," which is commonly composed of tin, 96 parts; antimony, 8 parts, and copper, 4 parts. The original idea in the use of a soft metal was practically the same as it is now—*i.e.*, to make a bearing which would conform to the surface of the axle. It is natural, then, that the alloys used to-day are somewhat harder than the original material employed. It is also natural that the same Isaac Babbitt should have been handed down to posterity as the inventor of the alloy, although, of course, quite erroneously.

♣

James L. Taylor, Newark, N. J., manufacturer of the Taylor Self-Locking Clamps, has received a large number of very flattering testimonials from purchasers of his clamps. We print one of them herewith:

New York, Dec. 15th, 1902.

Mr. James L. Taylor,
30 Lawrence Street, Newark, N. J.

Dear Sir: The Clamps I received from you have proven a very satisfactory auxiliary in my shop. They fill a long felt want, and are so good for the work they are designed for that I cannot speak too highly of them. I see no reason why they should not have a large sale among jobbing carpenter shops. I remain yours truly,

Charles A. Goldman,
Carpenter and Builder.

THE UNITED TACK CO.

The United Tack Company, Taunton, Mass., have been incorpoated under the laws of Massachusetts, with a capital of $100,000, with the following officers: Dr. F. A. Hubbard, president; Clinton V. Sanders, vice-president; and Luther Dean, treasurer. These gentlemen, with Judge Fred. S. Hall and Dr. Dwinell, comprise the Board of Directors. All of these parties are residents of Taunton, and their business capacity is well established in the community. The new corporation have bought out the old A. Field & Sons' factory, and are employing the same efficient tackers as formerly engaged in the plant, which fact the company refer to as placing them in a position to offer a first-class product at a moderate price, and solicit the confidence of the trade when placing orders.

♣

It is worth more than a passing notice that General Nelson A. Miles, in his last communication to the War Office, recommends the use of motor cars and motor cycles in the army, declaring that the cavalry is obsolete, and that motor vehicles will take the place of horses in the next war.

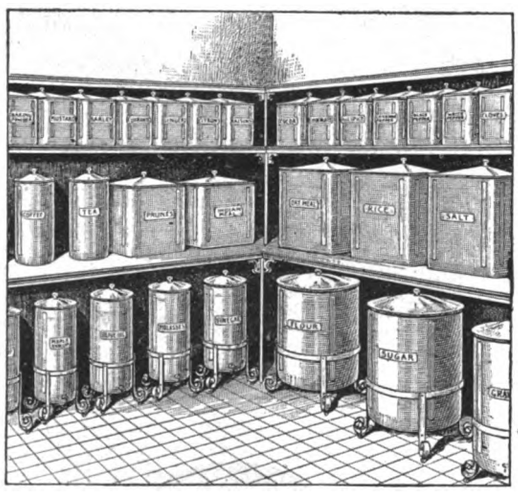
Appert Glass Water Coolers



ABSOLUTELY PROOF AGAINST GERMS, RUST OR DIRT

THE ice is placed in a separate container of glass or aluminum, and does not come in contact with the water. Self-closing silver plated faucets and aluminum covers are used.

There is nothing used in the cooler to wear out and the peculiar composition of Appert Glass makes it **practically unbreakable.**

3 to 40 gallon capacity.

In the economy of the household and hotel, Appert Jars offer perfect storage for all food products, such as cereals, sugar, coffee, butter, bread, etc., and when used for holding vinegar, molasses, wines, or other liquids, they are drilled for faucets at any desirable point, thus placing their contents within easy access. All Coolers and Jars fitted with tight fitting covers.

APPERT GLASS CO.

277 Broadway, NEW YORK

FREAKS OF FIGURES.

The Old Saw that They Never Lie is an Error.

If an ordinary business man was asked to state how much is 1,000, 100 and one dozen he would likely reply, without hesitation, 1,112. He might, without violating the laws of the country, put the figures at 1,085 or 1,338. A dozen is commonly supposed to be twelve single things. A baker's dozen is thirteen. A dozen of cotton yarn is just one "hank," composed of twelve "cuts." A dozen fish in some localities is twenty-six, and a dozen of pottery in the wholesale trade may mean two or it may mean fifty pieces, not depending on the actual number of pieces, but on the size, weight, etc., of the jugs, bowls, plates, etc.

A printer's 1,000 is only 960, but it takes 1,200 staves to make 1,000 in some sizes that are made for export. In many of the trades the terms "dozen," "hundred" and "thousand" do not bear their literal English meaning, but a technical one peculiar to each trade, as in stone work, lath, shingles and cotton yarns. This technical perversion of plain English extends to most of our weights and measures. Thus a gallon may be 231 cubic inches or it may be 265. In the school arithmetics four quarts make a gallon, eight gallons make a bushel; but in practice it takes forty quarts to make a bushel of corn, beans, etc. This is because only the liquid measure quart cup (231 cubic inches to the gallon) is in use, while the dry measure gallon contains 265 cubic inches.

♦

The Morse-Boulger Destructor Co., 39 Cortlandt St., New York, N. Y., are the publishers of an extremely interesting booklet concerning the Sanitary Disposal of Municipal Waste. The company state: "The greatest problem now before the American people is municipal cleanliness. The wastage of every city must be disposed of every day or the people perish. The key to cleanliness is not a broom—but fire, because heat is the great transformer. Modern science and engineering skill have made it possible to transform a valueless menace to life and health, into safe and useful materials having a real commercial value." It is to this important subject the pages of this book are devoted and the reader is invited to carefully examine all that is contained in them, because the facts are correctly presented, and the deductions based upon them will be found to be born out by practical experience upon a commercial scale. The booklet is illustrated throughout with views of Destructors situated at various places, and also has many fine sectional views of their productions.

♦

Flint & Walling, Kendallville, Ind., in presenting to the trade their catalogue No. 42 have supplied a book that will be found valuable to all dealers in goods of their line. The catalogue is illustrative and descriptive of the Star Windmills, Hoosier and Fast Mail Pumps with a complement of auxiliary goods produced by Star manufacturers. The company warrant their Star Mills and Towers of all kinds and sizes and all goods they manufacture, to be made of first-class material, with best of care and workmanship, when assembled and erected according to their instructions and cared for properly, to resist any winds that do not damage substantial buildings, or other wind mills in proximity for one year from date of erection. They agree to furnish free of charge at factory, all repairs needed within said year caused by faulty material or workmanship. They further guarantee Star Windmills to perform as much work, and more, than any other mill manufactured, and that in lighter winds. The above catalogue contains 250 pages in the course of which the company give a full list of their private telegraph code. The book is well bound and throughout is finely illustrated.

HARDWARE DEALERS' RECORD.

Hardware dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Stores, Incorporations, Etc.

Baltimore, Md.—The Standard Hardware and Electric Company has been incorporated for carrying on electrical construction and Hardware business, by Charles E. Goodrich, Bernard L. Johnson, Jacob E. Thomas, Henry W. King and Joseph Sollers, Jr. Capital stock, $10,000.

Brewer, Me.—George E. Homestead has opened a new Hardware store on Wilson Street near the Ferry Slip.

Buck Creek, Ind.—The Buck Creek Hardware Company has incorporated with a capital stock of $2,000. Directors: W. H. Vaughn and John C. Eckhart.

Buckhannon, W. Va.—Buckhannon Hardware Company has been incorporated to do a retail or wholesale Hardware business; capital, $100,000. Incorporators: W. P. Fowkes, J. F. Lathhain, J. R. Ridgeway, J. C. McWhorter and W. G. Young, of Buckhannon, W. Va.

Haverhill, Mass.—Hanscom & Potter, a new Hardware firm, have opened a store at 32-36 Main Street. A full line of goods is exhibited and it will be possible to secure all kinds of Hardware and builders' supplies, pocket and table cutlery, iron and steel, blacksmiths' supplies, mowing machines, horse rakes and agricultural implements, paints, oils, varnishes and painters' supplies, field, lawn and garden seeds, fertilizers and drainage pipes, etc. It will be without doubt one of the best equipped Hardware stores in this section, outside of Boston.

Jersey City, N. J.—John S. Menagh Company has been incorporated to manufacture paints, oils, Hardware, etc.; capital, $70,000. Incorporators: John S. Menagh, Preston S. Menagh, 134 Newark Avenue, Jersey City; Frank E. Menagh, 170 Pavonia Avenue, Jersey City.

Lansdowne, Pa.—William L. Rementer, who has been summering in Europe, will upon his return, open the store on Lansdowne Avenue, formerly occupied by the Surburban Gas Company. He will carry a full line of Hardware.

Marion, Ill.—Duncan-Baker Hardware Company has been incorporated; capital $25,000. Incorporators: John H. Duncan, M. L. Baker and James R. Spiller.

Morganfield, Ky.—Whitsell & Northern, a new Hardware firm, are opening their big stock in the T. N. Givens brick building on Adams Street and have on the ground the lumber for building a large wareroom in the rear. The new firm are preparing to do business on a large scale.

Nicholville, N. Y.—A new Hardware store will be opened by Henry Blanchard by October 15th.

Riverside, Cal.—George F. Mott has opened a large new Hardware store with a very fine stock of goods.

Rockdale, Texas.—The Coffield Hardware Company has formally opened for business in the Randle Building.

Social Circle, Ga.—The Almand Hardware Co. have recently been incorporated with branch houses at Conyers and Mansfield.

Stevens Point, Wis.—Geo. Olson and Brother are putting up a new Hardware store here. It will be 50x60 feet in size, two stories. They will be ready for business by the middle of October.

St. Johnsville, N. Y.—Earl Morford has opened a stove and tinware store.

Changes.

Altoona, Pa.—Forney Brothers, the Hardware dealers, have made a number of improvements and enlarged their store at Eighth Avenue and Twelfth Street. They added a 50 foot extension to the store, making it 120 feet in length, with an eighty foot stock room on the second floor. The basement has been fitted up as a first-class workshop.

Barberton, Ohio.—A new factory that will employ 800 men has been secured for Barberton. It is that of William Cardan & Sons of Brooklyn, N. Y., manufacturers of machinists' tool castings.

Belleplaine, Kan.—Harold Watson has bought the interests of I. F. Steele in the Hardware and grocery firm of Cromwell & Steele and they are now moving into the new store building erected by John G. Siceloff.

Byran, Ohio.—The Columbia Hardware Company, composed of Theo. Kampf and A. F. Gleason, has dissolved. Mr. Gleason expects to move to Toledo, there to enter business. Mr. Kampf will run the store here in the Kampf Building on Main Street. This is one of the largest Hardware stores in this section of the country.

De Land, Ill.—Frank Armstrong has purchased a half interest in the Hardware business of W. T. Higgard.

Falls City, Neb.—Loucks & Jones have sold their farm implement business to Ernest Werner and John Mosiman, the new owners to take possession at once. Loucks & Jones have been in business here for many years and had built up a good trade.

Lebanon, Pa.—Stockholders of the Lebanon Stove Works at a recent meeting voted to increase the capital stock of the corporation from $200,000 to $300,000 and reducing the par value of the shares from $50 to $10.

Jonesboro, Tenn.—J. S. Byrd announces the dissolution of the partnership of Byrd-Lowry Hardware Company,

Massillon, Ohio.—Within a very short time the two-story brick building now occupied by the Charles Oberlin Hardware store, in North Erie Street, will be remodeled. An entire new front will be put in and an extra story added to the building. Other improvements will be made about the building.

Orrick, Mo.—Ed. L. Hunt has sold his stock of Hardware and farm implements in Orrick, the purchasers being Charles Brown of this place and I. C. Brown of Hartwell, Ky.

Pittsfield, Mass.—James Kittle has sold out his interest in the Berkshire Hardware Mill Supply Company to W. S. Smith and James A. De Camp, the other members of the firm.

Oelwein, Iowa.—The Howard Hardware Co., has sold out to Fred. Field, and Mr. Field is now in charge.

Princeton, Ill.—J. B. Morton has purchased the Hardware stock of Harris & Stickel, at the South End, and has taken possession. Mr. Morton will carry a full and complete stock of Hardware.

Springfield, Ill.—M. Reinhardt & Sons, Hardware dealers of this city, have broken ground for the erection of a new business building, to be two stories in height. The building will be constructed on Sangamon Street.

Topeka, Kan.—A $1,000 one-story warehouse and brick addition will be built on the business building at 706 Kansas Avenue, as additional warehouse room for the Coughlin Hardware Company, which now occupies the building.

Tuscola, Ill.—Mr. Coddington, of the firm of Coddington & Bauman, of this city, has purchased the stock of Hardware, buggies, wagons and implements of Martin Bros., at Garrett, and has placed Elmer Timmons, of Atwood, in charge of the business.

Waynesboro, Pa.—The Hardware store of Demuth & Englar, No. 20 East Main Street has passed into the ownership of Frank L. Gilbert and H. Clarence Gordon. The firm of Demuth & Englar will be dissolved because D. Fred. Englar, the junior member, desires to return to Carroll County, Md., where he has large business interests, and from which place he came to Waynesboro a little over two years ago. He purchased an interest in the Hardware store of J. H. Gehr and the business was conducted under the firm name of J. H. Gehr & Co., from July, 1901, to July, 1902, when Mr. Gehr sold his interest to John Demuth. During the past year and a few months the firm name has been Demuth & Englar. The new firm took possession October first.

HARDWARE MANUFACTURERS' RECORD.

Hardware manufacturers over the country, are requested to contribute to this page. News of new factories or companies, changes, improvements, etc., will be gladly received, and promptly published.

New Incorporations, etc.

Camden, N. J.—Rudolph Hardware Company has been incorporated to manufacture Hardware at No. 419 Market Street; capital, $100,000. Incorporators: George J. Rudolph, H. F. Robinson and Richard L. Hoolahan.

Dallas, Texas.—Ajax Mills has been incorporated; capital stock $2,000. Purpose to manufacture and sell waste, twine, batting and other like articles made from rags, fibre or wool. Incorporated by W. G. Tice, G. A. Burbank and Ed. H. Love, all of Dallas.

Elmira, N. Y.—The Elmira Novelty & Specialty Company has been incorporated with a capital stock of $100,000. The purpose of this company is to manufacture the Eureka Scissors and Shears Sharpener, the Daisy Combination Draughting Board and the Perfect Pencil Sharpener. The company expects to start business and the manufacturing of the products at once. The officers of the company are President James H. Van Tassell; vice-president and treasurer, James N. Thornton; general manager, Frank Depew, of New York City. The company will open offices in Room 2 of the Lyceum theatre block in this city next week.

Hudson, Mich.—The Chamberlin Ryder Manufacturing Co., has been organized with the following officers: H. G. Chamberlin, president; A. W. Cooper, vice-president; E. E. Cole, secretary; Edwin Eaton, treasurer; A. V. Ryder, general manager. The capital stock of the company is $35,000 and it will manufacture a general line of farming tools.

Jersey City, N. J.—American Flexible Stay-bolt Company has been incorporated; capital, $200,000. Incorporators Edward Allen, Charles G. Tate and George E. Reynolds, of Pittsburg, Pa The company will mine and deal in iron, steel and other metals.

Lockport, N. Y.—A file manufactory, capitalized at $40,000 will be located here. J. S. Layburn of Rochester, formerly connected with the Ager File Works of this city, will be the father of the concern.

New York, N. Y.—Hayden Implement Company has been incorporated; capital, $100,000. Directors—H. A. Hayden, M. B. Mendham and L. P. Mendham, New York.

Plainfield, N. J.—The Plainfield Tool and Equipment Company has been incorporated, with Joseph B. Longhead, Robert H. Linder, Robert W. Barwood and Peter J. McDonough, incorporators. Capital stock, $100,000.

St. Louis, Mo.—Seidel Manufacturing Company has been incorporated; capital stock, $20,000. Edward B. Seidel, St. Louis, James Calhoun and Nellie E. Seidel of St. Louis and Claude S. Magner, Chicago. To manufacture and deal in Hardware specialties.

Washington, D. C.—The Federal Bolt & Rivet Company has been incorporated. Capital stock, $1,000,000, with John L. Dement, P. H. Kennedy, Clarence D. Wright, of Washington, Edwin E. Cook and Robert M. Nelson, of Cleveland, Ohio, incorporators.

Waterbury, Conn.—Messrs. Stein & Moran of New York have leased the old factory once occupied by the Empire Knife Company and will manufacture a new acetylene gas lamp there. The main office will remain in New York. New machinery, which will be made, is to be put in, and several months will elapse before the concern will start up work.

Ypsilanti, Mich.—The Comstock Sash Lock & Novelty Co. has been incorporated. Capital $200,000. A factory has been rented and the company will commence the manufacture of all sorts of metal novelties.

Changes.

Fullerton, Pa.—The Dent Hardware Works at Fullerton will enlarge their plant by the erection of a new foundry, warehouse and paint shop. The foundry and warehouse will measure 70x100 feet, and the paint shop 40x65 feet.

Mc Kees Rocks, Pa.—The destruction of the wire-drawing plant of Kidd Bros. & Berger, has resulted in the decision of that firm to remove its works farther down the Ohio River. Foundations have been laid for a new wire-drawing works at Aliquippa, adjoining the works of the Vulcan Crucible Steel Company. The new wire plant will be larger than that at McKees Rocks, and the number of men employed will be materially increased.

Havana, Ill.—The new shovel and steel company, called the Crescent Handle and Shovel Company, that will be located on the grounds of the Metal Wheel Company, has elected O. B. Thorp president.

Kalamazoo, Mich.—The G. J. Bremer Machine and Tool Co. has decided to remain in Kalamazoo instead of removing to Benton Harbor, as was announced some weeks ago. Additional capital to extend the business as desired has been secured and G. J. Bremer retires from the firm. F. J. O'Hara, of Detroit, and J. F. Russell, of this city, have taken an interest in the concern. Fred G. Bremer will remain as secretary.

Marquette, Mich.—The local men who have held stock in the Crystal Falls Woodenware Co., whose butter-dish and clothes pin manufactory at Crystal Falls was completed several months ago, have sold their holdings to H. P. Lucas and Wm. Cotton, of Escanaba. The purchasers are heavy stockholders in the big Escanaba woodenware plant, which is controlled by the trust, and while Frank Lucas still retains his majority stock of the Crystal Falls concern, it is presumed that the deal just closed has taken the latter company from the list of independents. The clothes pin department of the Crystal Falls factory is said to be the largest in the world.

Syracuse, N. Y.—J. A. Rose, inventor of the iceless refrigerator, has received several orders for his invention. He is arranging now to organize a company to manufacture refrigerators upon his patents.

Torrington, Conn.—The Union Hardware Company of Torrington certifies a reduction of its capitalization by the announcement of the retirement of its preferred stock.

Tewksbury, Mass.—The powder house situated on the farm of Porter Livingston has been ordered removed. The nearest house is 500 feet away, and the board of selectmen realizes that such a separation is insufficient.

New York, N. Y.—Purity Enameled Ware Company has been incorporated; capital $1,000 and directors: William L. Frank and A. H. Thiele, of Brooklyn; Bernard Hornburg, of Manhattan.

Taunton, Mass.—Lincoln & Williams are the new owners of the Field No. 2 Tack Works, having purchased the plant from the syndicate which secured it at the recent auction of the Atlas Tack corporation's property in this city. The members of the firm were formerly connected with the Lincoln & Wood Works, and have long experience in the making of drills, etc., which will be the product of the new company. They take possession at once, and are busy fitting their newly acquired mill for the work. It will be a decided accession to the industrial plants of Taunton.

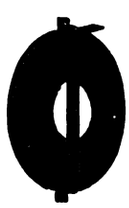
TO PUT TO THE FRONT



Sargent's Gem Feed Chepper

Every season has its calls for the GEM, but during the next few months they will sell fast. Are you ready? Have you a full stock so that the housekeepers of your vicinity can purchase this popu ar kitchen specialty at your store? **We are advertising more extensively than ever** in the favorite magazines read by women, and are having more responses to our advertising from progressive housekeepers who want the best utensils in their kitchens. It will pay you to follow up our advertising by distributing slips bearing your imprint which we will furnish, by displaying the GEM in the store window with some of our new show cards and by using in your local paper the electrotyped ads we supply. Our new "Descriptive-Suggestive" pamphlet will interest you; it suggests many methods to increase your sales of the GEM. Send for a copy.

BICYCLE AND SPORTING GOODS RECORD.

Bicycle manufacturers and dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Incorporations, etc.

Buffalo, N. Y.—The Salem G. LeValley Company has been incorporated with a capital stock of $30,000, and will deal in all kinds of sporting goods and sportsmen's supplies. The company will begin business on a capital of $24,000. The directors are Mary LeValley, Edward Cox and Stephen T. Lockwood.

Chicago, Ill.—Chicago Rifle Manufacturing Company has been incorporated. Capital $50,000; manufacturing firearms; incorporators C. I. Backus, J. W. Decon, F. L. Fairbank.

Columbus, Ohio.—The Oscar Lear Automobile Company has been incorporated. Capital stock, $30,000; by Oscar S. Lear, E. J. Miller, B. W. Gilfillan, W. Guy Jones, W. H. Holiday.

Defiance, Ohio.—The La Fave Arms Company has been incorporated. Capital stock, $40,000; by T. T. Ansberry, J. H. La Fave, A. F. Kruse, A. M. Kruse and George T. Farrell.

Changes.

Ashtabula, Ohio.—Edward McClintock has closed his bicycle shop on Center Street in the Smith building.

Henniker, N. H.—The factory recently vacated by A. J. Foster has been leased to the K. and C. Manufacturing Company, manufacturers of bicycle and automobile rims. They will commence work at once.

Huntington, Mass.—E. E. Morand, the bicycle dealer, has moved his headquarters from Arnold Street to Elm Street. This place Mr. Morand is fitting up in modern shape, having plenty of room and with an entrance on both Elm and Thomas Streets.

Northampton, Mass.—Geo. W. Williams, who opened a bicycle repair shop in Sullivan's Block about six months ago has sold out his stock, preparatory to removing to Dayton, Ohio.

Springfield, Mass.—Messrs. Whitten & Cameron have dissolved partnership, C. E. A. Cameron retiring from the firm. J. E. Whitton and E. R. Clark have formed a partnership and will continue the bicycle and automobile business at 280 Worthington Street and 157 Dwight Street.

West Warren, Mass.—Nicholas Ricard has given up his bicycle business located in Main Street and has accepted a position with a New York firm.

Fires.

Lake Hopatcong, N. J.—The shipping house of the American Forcite Powder Works at Landing, Lake Hopatcong, was totally demolished by an explosion, which caused a fire and destroyed two other nearby buildings, one of which was the packing house, containing a large quantity of dynamite in tubes, while the other had in it about 8,000 empty packing cases. The two buildings and their contents made a fire which lighted up the country for miles around, but there was no further explosion. In the shipping house there were upward of one hundred cases of dynamite, each containing about seventy-five pounds of the explosive. Near the door there stood a loaded car filled with cases ready to be hauled to a magazine. Where this car stood the hole in the ground was deepest. The shipping house had, in some unexplained manner, caught fire, and this caused the explosion, the report of which was plainly heard in Dover, eight miles away.

Punxsutawney, Pa.—The Drummond Cycle Company was damaged to the extent of $15,000 on which there was an insurance of $2,500.

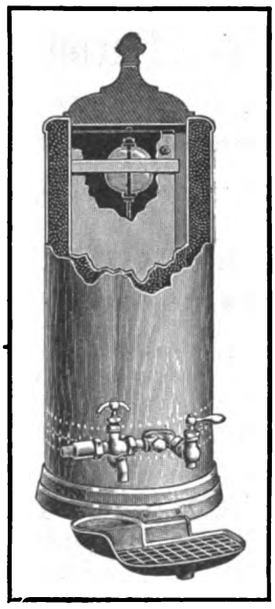
Saratoga, N. Y.—The Putnam block, was damaged by fire, which originated in Fred Hawkin's bicycle store and extended to Ira C. Barber's market. The loss is $5,000.

Walsenburg, Colo.—The Bicycle shop of B. C. Newlove was damaged to the extent of $450, with no insurance.

Embarrassments.

Worcester, Mass.—In the foreclosure of a mortgage given by Charles S. Wood to Dana M. Dustan, an auction of personal effects of the former was held at 22 Thomas Street by Henry M. Clarence, acting for Myra A. Dustan, assignee of the instrument. The fixtures of the store and a lot of guns were sold to various bidders and brought $200. The remainder of the property, comprising sporting goods, valued at about $1,400, were sold at 31½ cents on the dollar to A. B. F. Kinney & Co.

Miscellaneous.



Jellico, Tenn.—The Jellico Powder Works has commenced operations. Although the plant was started nearly a year ago, taking into consideration its capacity and the difficulty to get machinery made, the builders have done remarkably well. It was started to be a 100 keg per day mill but it ought to be more than 1,000. Orders have been filed for shipment beyond the owners' most sanguine expectations.

Newark, N. J.—Plans have been completed for the formation of a corporation to include the Du Ponts, of Wilmington, Del., and the International Smokeless and Chemical Company of Philadelphia with the object of controlling the manufacture of smokeless powder in this country.

New York, N. Y.—Treinis Bros., who were at 88 Chambers Street, New York, until burned out September 15, have reestablished themselves in new quarters at 498-500 Broadway, between Broome and Spring Streets, and will make a determined effort to get a new line of their goods speedily in the market. They manufacture Football and Baseball Suits and a general line of Boxing Gloves, Catchers' Gloves and Mitts, Punching Bags, Platform Punching Bags and similar goods for athletic and sporting purposes.

The Nysa Hygienic Water Cooler

The Most Perfect Water Cooler in the World.

WHY?

1. The Materials used are the most durable.
2. The Water Reservoir is the best German Enamel Ware.
3. It is the only Cooler made in which the water and ice are separated.
4. The Quality of ice need not be considered, as it is separated from the water.
5. It is made with a view of using the minimum quantity of ice in cooling.
6. It can be attached direct to water supply, filling automatically or can be filled in the usual way.
7. It is the only cooler in which water can be cooled without changing its properties.
8. It is the only Cooler arranged to connect with the sewer to carry off all waste.
9. It is the most ornamental, compact, convenient, economical, durable and perfect Water Cooler in the world.

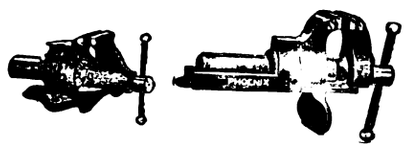
Learn Advertising

There is no thing so valuable to the man in business as a knowledge of advertising. It is the greatest force in modern business and no young man can hope to achieve a substantial and enduring success without it The advertisement writer and manager is one of the highest priced em ployees in any business, and his opportunities for advancement are the best. Any man with a good common school education can win for him self a place in the advertising world.

Many of those who have followed my instructions now hold positic ns with leading concerns and are receiving from $30 to $125 per week. Mr. Charles H. Brown, President of The Chicago Pure Food Marketing & Distributing Company, says: "About six years ago the business at which I was working paid me $20 per week. I studied advertising and in a very short time I doubled my salary. Six months ago I was elected President of a $250,000 Corporation and I am Vice-President and Manager of an. other large corporation with liberal stockholdings in each. The foundation of the progress I have made was laid by the careful study of Bates Litera- ture. I am satisfied that the foundation for a career in the advertising business can be made by mail, and I am satisfied that Mr. Bates can do this better than any other person or organization in the world."

My course is the only one being given in connection with an actual ad" vertising business. It is therefore the most practical course. "A Busi- ness Course for Business Men."



If you are dissatisfied with your present salary, if your work is un congenial, or if you wish to learn to advertise your own business in the most effective manner, send three two-cent stamps for my handsome sixty-page prospectus telling how and why advertising can be taught, who should study advertising, and booklets "Ill Fortunes of Brother Bill," "Other People's Brains," and "How Shall A Young Man Succeed?"

Double-Coated Gray Mottled Ware. We are selling it 46 per cent. cheaper than our competitors. The quality of our goods speaks for itself. It is customer winning.

Tinware and Galvanized Ware

We are booking and executing orders for a full line of all the above wares for immediate delivery. One trial will convince you of their excellence as sellers.

"No Trust"

We are not "association members"—we have no "trade agreements"—we, therefore, can and do sell our wares at lower prices than our competitors.

Our catalogue tells all. We have also issued a new net price list of Tin and Galvanized ware. Shall we send them? Mention Hardware.

BETTER STEEL, GREATER WIDTH AND HEAVIER GAUGE

are three points of superiorty in the "STERLING" HACK SAW BLADES and account for their popularity.

They will cut all kinds of metal, and they are the most economical blades sold, because they are the most durable. You have no waste of time or material, by having to true up ends of crooked cuts. We shall be glad to have the name and address of any dealer who does not keep them.

PRICES CURRENT.

The prices noted in this Prices Current are intended for the Hardware trade only, and for such quantities as are usually purchased by retail dealers. They are carefully revised and represent quotations at which purchases can be made. Very small quantities, and broken packages, frequently make higher prices necessary.

Subscribers are requested to notify us of any discrepancies, as we desire to make this department of our paper worthy of their constant attention.

The list prices, from which discounts are given, will always be furnished the dealer upon request, by the manufacturer quoted.

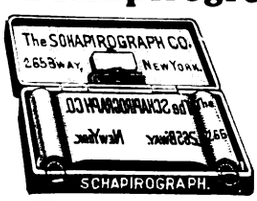
Twenty-Three Years Experience

in the manufacture of Duplicators are back of every

Daus' "Tip-Top" Duplicator

Ten days trial, without deposit, will prove that 50-100 copies of pen or typewritten circulars, price-lists or invoices, can be made from one original, and that Daus' "Tip-Top" is the best, simplest and cheapest device of its kind. Requires no washing, no press, no printers' ink.

Size No. I for $5 net. Send for circular.



Felix H. Daus Duplicator Co., Daus Building 111 John Street New York, U. S. A.

An Eyeful of Observation

Will prove to you that among duplicating devices

The Schapirograph

has no equal. We challenge comparison. Try it side by side with other kinds. You will declare it to be the best made, turning out the best and most work in the shortest time—100-150 circulars, invoices or pricelists from one pen or typewritten original. You need it in your business.

What goes with it:

One best ribbon for duplicating typewriting; two bottles of ink, a special rubber roller. Price $6 net.

Ten days free trial. No deposit required. Send for circular. Mention Hardware.

The Schapirograph Co.

265 Broadway NEW YORK

The newest and best of oilers, wasting neither time nor oil when being filled, is

The Rochester Automatic Oiler

No removal of spout necessary when filling it—fills itself by depressing spout. Over filling impossible.

Made with spring or solid bottom. Spring bottom is forced on—not soldered or brazed. Cannot break from use as other oilers.

In our Solid Bottom Oilers, well and bottom are made of one piece of metal.

Our Oiler is made of 20-gauge cold rolled "Swedoh" steel. Is copperized to prevent rust. Every oiler guaranteed.

Made for light and medium weight oils. It's the handiest and most economical oiler for machines of every description. Is filled in the dark. A trial order will convince. Send for catalogue.

Mention Hardware.

Rochester Automatic Oiler & Supply Co.

ROCHESTER, N. Y., U. S. A.

The No. 2 HAMMOND

Possesses

ALIGNMENT—Perfect and permanent
IMPRESSION—Invariably uniform
TOUCH—Soft, light and elastic
SPEED—Over 200 words a minute
DURABILITY—The fewest parts, the best made
VARIETY—26 languages, 100 styles of type, paper or cards of any width or size on one machine
PORTABILITY—Weighs only nineteen pounds including traveling case.

CUR GASCLINE LIGHTING SYSTEM

and Lamps are delighting our customers, because our Improved Generators are properly constructed; we have been improving them for four years—anyone can easily clean them. Hundreds of testimonials from merchants. We don't ask you to take our word for it—**we send them on trial.** 600 candle power Lighting Systems—Arc Lamps—Gravity Lamps—all styles. We are selling hundreds of our Improved Generators (burners) to put on other lamps where the burner has proven worthless. Reduce your light bills 75 per cent., and sell to your neighbors.

Agents wanted everywhere. Absolutely safe. Permitted by Insurance Companies. We are headquarters for all kinds of mantles. Write for catalogue and prices.

"WHAT THEY SAY."

OWENSBORO, KY., 4-4-'03.

CENTURY CASH REGISTER CO., LTD.,
DETROIT, MICH.

Gentlemen.—The Century Cash Register we bought of you on Feb. 7th has given us such universal satisfaction, and we were so well pleased that we ordered another Century Register on the 20th of March, and now have both in use. They are certainly ornaments to our store and as to their accuracy must say that it would be impossible for you to make any improvements. We have carefully examined other Registers that were bought from other factories at **six times the cost of yours** and could not even find one point that was an advantage over yours, which cost only one-sixth the price. **In fact, if prices were equal we would prefer the CENTURY over all others that we have examined.** No doubt you will feel a little conceited over the compliment that we are paying you, but we feel that you are justly entitled to it, and at any time we can be of any service to you for reference in regard to the Century Register, we shall certainly be delighted in recommending it with the merit it deserves.

Yours very truly,
MEYERS & MOISE,
Queensware, Glassware, Cutlery, Notions, Fancy Goods and Bar Goods.

The writer of the above is a leading Kentucky merchant and a very large dealer, rated in Dun and Bradstreets at $20,000, amply able to have purchased the high-priced machines had he considered them better than ours, ordered the second Century after giving the first a hard test of a couple of months' use. We are daily in receipt of similar letters from many other responsible merchants too numerous to print, which we will be pleased to send on application. Endorsements from reliable merchants like the above is the best guarantee that any manufacturer can advance to prove the merits of his goods.

Every machine sent on 7 days' trial and guaranteed for 5 years.

Special Offer. We have a plan for advertising and introducing our machine to new trade which we are extending to responsible merchants for a short time, which will put you in possession of this high-grade, up-to-date, 20th Century Cash Register for VERY little money and on VERY easy terms. **PLEASE WRITE FOR FULL PARTICULARS.**

BEECH PATENT MOP WRINGER and PAIL COMPLETE
Patented

FOR use in Hotels, Office Buildings, Residences, Public Buildings, School Houses and Churches.

Quick and positive in action—durable and handsome in appearance. Best materials throughout. Mop wrings dry — dirt cl aned out.

WRITE US OR YOUR JOBBER FOR PRICES
BEECH NOVELTY COMPANY
MANSFIELD, O.

Perfect Working Model Wrench

EXACT SIZE OF CUT

Ebony, Ivory, Coral or Amber Handle, $2.00 per doz.

Pearl or Stone Handle, $3.00 per doz.

We will send two dozen prepaid in a handsome plush lined cherry tray to any dealer **ON CONSIGNMENT**, to be returned at our expense if found unsalable. We could not do this if they were not the best selling novelty in the hardware trade. They are now sold by over 2,000 hardware dealers in the U. S. It costs you nothing but a 2c. stamp to try them. Drop us a line and we do the rest.

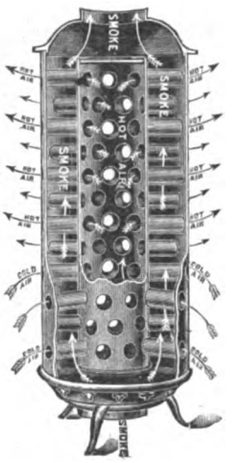
The Part that Does the Business.

12 Million Families



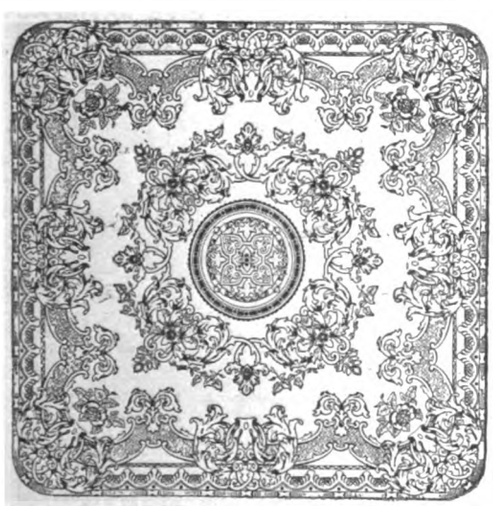
Read about the **Rochester Radiator** every month in 82 publications bringing 18,000 inquiries a s ason. Those from YOUR TOWN are referred to YOU, if you carry our goods. Thus, we sell them to you, and then sell them FOR you.

Sell the Radiator That Radiates

Take a common sense view of heating. If you wish to heat a poker you hold it OVER the fire, not at the SIDE.

We hold 96 to 120 pokers over the fire, each having a hollow air space in center, through which a current of air rapidly passes, sending the heat to all parts of the room, getting results which no DRUM or SIDE HEATER can give.

A postal will bring you full description and proofs from men in the trade who have sold thousands of them. Made in 12 styles, and sell from $2.00 up. We will remember you with a Souvenir later, watch out for it.



EASY

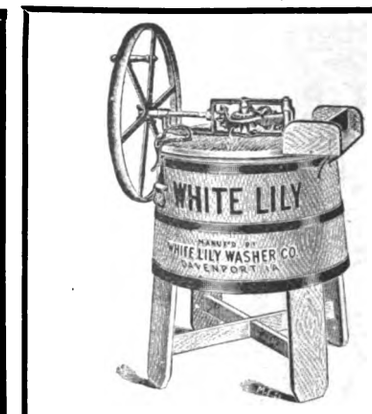
WHY IS THE

O. K. THE BEST ROTARY WASHING MACHINE?

—BECAUSE—

1.—It is the only Rotary washer that has **Revolving Steel Ball Gearing,** reducing the friction and thus making machine so light running and almost noiseless.
2.—The tub is made of **Louisiana Red Cypress Lumber, cherry finish;** the legs are **solid with tub** (not removable, breakable legs fastened with screws).
3.—The wheel turns right or left, pin wheel or dasher reverses automatically, turning the clothes back and forth through the hot suds, and cleaning them without **rubbing** them to pieces.
4.—This washer is made by **experienced mechanics,** and will out-last any other washer on the market.
5.—The tub has a wringer box fastened with steel brackets.
6.—The lid on the tub closes tight, **no escape of steam.**



Manufactured by H. F. BRAMMER MFG. CO.,
DAVENPORT, IOWA.

PERFECTION IN COFFEE MAKING

is achieved with the "EXCERPTA" Coffee Pot. A delicious beverage, clear and fragrant as wine, made instantaneously. Simply pour boiling water through trap and serve. Beautiful. Durable. Practical. Our magazine advertisements are resulting in inquiries from all parts of the country. We would like to refer those from your locality to you. Send for particulars. They will interest you.

W. A. STOKES & CO., 30 Warren St., New York.

From Margam Forge, Glamorganshire, South Wales, to Martin's Ferry, Belmont Co., Ohio.

MF

Note the Coincidence:

The most favored brand of roofing tin, the MF which originated at Margam Forge in South Wales about sixty years ago, is now being produced by the American Tin Plate Co. in its works at Martin's Ferry, Ohio.

At the Martin's Ferry Works the MF old style process has been combined with the "New Method" of finishing Terne Plates. The result of this happy combination has been the U. S. Eagle N. M.

Ask W. C. Cronemeyer, Agent, 1211 Carnegie Building, Pittsburg, Pa., for our new booklet which teems with useful information.

Rochester Automatic . . . Oiler . . .

Fills itself by depressing spout. It's removal, when filling it, is unnecessary, as with other oilers.

Can't be overfilled. Wastes, therefore, no oil.

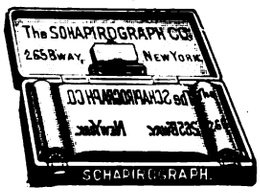
Made of cold-rolled steel; is copperized to prevent rust. Made for light and medium weight oils. Spring or solid bottom.

Spring bottom is forced on—not soldered or brazed. Well and bottom in solid bottom oilers made of one grade of metal. Bottoms in either oiler can't be broken through use.

Fully Guaranteed

Handiest Oiler for automobiles or machines of any kind. A trial order will convince. Send for catalogue. Mention Hardware.

Rochester Automatic Oiler & Supply Co.



Rochester, N. Y., U. S. A.

Ann Arbor Lighting System

BE INDEPENDENT

of the gas and electric light companies.

With an Ann Arbor Lighting System you can light your store better and cheaper than with electricity or gas. And the cost of operation is only about one-tenth as much. If you are using kerosene lamps, you should be particularly interested. Fuel is gasolene, absolutely safe, and permitted by the National Board of Fire Underriters.

If you want a store that will draw trade, write today for information and introductory offer. Liberal proposition to agents. Write for Booklet A on Lighting System, and Booklet C on Lamps for store and house.

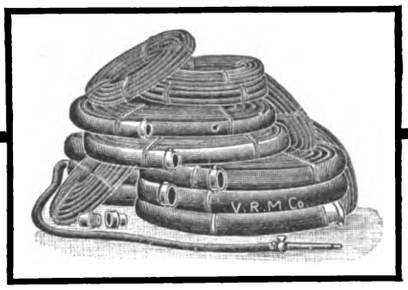
Learn Advertising



There is no thing so valuable to the man in business as a knowledge of advertising. It is the greatest force in modern business and no young man can hope to achieve a substantial and enduring success without it The advertisement writer and manager is one of the highest priced employees in any business, and his opportunities for advancement are the best. Any man with a good common school education can win for himself a place in the advertising world.

Many of those who have followed my instructions now hold positions with leading concerns and are receiving from $30 to $125 per week. Mr. Charles H. Brown, President of The Chicago Pure Food Marketing & Distributing Company, says: "About six years ago the business at which I was working paid me $20 per week. I studied advertising and in a very short time I doubled my salary. Six months ago I was elected President of a $250,000 Corporation and I am Vice-President and Manager of another large corporation with liberal stockholdings in each. The foundation of the progress I have made was laid by the careful study of Bates Literature. I am satisfied that the foundation for a career in the advertising business can be made by mail, and I am satisfied that Mr. Bates can do this better than any other person or organization in the world."

My course is the only one being given in connection with an actual advertising business. It is therefore the most practical course. "A Business Course for Business Men."

If you are dissatisfied with your present salary, if your work is uncongenial, or if you wish to learn to advertise your own business in the most effective manner, send three two-cent stamps for my handsome sixty-page prospectus telling how and why advertising can be taught, who should study advertising, and booklets "Ill Fortunes of Brother Bill," "Other People's Brains," and "How Shall A Young Man Succeed?"

HARDWARE

Berger Brothers, 231 to 237 Arch Street, Philadelphia, Pa., are the manufacturers of the most perfectly cut and brightest tinned Pipe Straps known to the trade. They also have a full supply of their own make roofers and plumbers wrought and malleable hoops of a quality upon which they founded the reputation they have ever enjoyed for turning out good goods. They also manufacture the Perfection Extension Ladder, which is operated by an endless rope, having no fixtures of intricate construction that are liable to get out of order. Circulars sent upon request.

♦

Recent tournaments in Pennsylvania have demonstrated the shooting qualities of Peters shotgun ammunition in the hands of amateurs. At Ligonier, Pa., Mr. L. B. Fleming won high amateur average with 96 per cent., and Mr. Fred Coleman of Hegins, Pa., won the amateur averages at Milton. Scranton (interstate tournament), and at the three days' shoot of the Florist Gun Club, Philadelphia, Pa.

♦

Owing to the controlling importance of the American Hardware Corporation, the position of treasurer has been vacated by P. Corbin, and Charles E. Wetmore was elected in his place. Charles M. Jarvis resigned the position of second vice-president of P. & F. Corbin, and Charles H. Parsons was promoted to his place. A. N. Abbe was elected secretary, and William H. DeWolf, assistant secretary. A number of minor changes were made necessary by these promotions. P. Corbin, while president still of P. & F. Corbin, is also president of the American Hardware Association, Mr. Jarvis continuing as its first vice-president and chief executive officer.

♦

The Guinn Ball Bearing Company, formerly of Baltimore, Md., has arranged to establish its factory at Niagara Falls, N. Y., and will at once transfer its machinery and manufacturing plant to the latter place.

♦

The wire, wire nails and pipe exports made by the American Steel & Wire Co. and the National Tube Co., branches of the United States Steel Corporation, through New York and other Eastern seaboard points last month aggregated about 6,500 tons, being a slight increase over similar exports made in August, and a decrease of about 50 per cent. when compared with the July shipments abroad.

♦

Some of the handsomest and most convincing advertising in the columns of the trade press and leading magazines is put forth by the J. Stevens Arms & Tool Co., Chicopee Falls, Mass. This attractive use of the advertising columns of popular publications, creates a strong desire to know more of such goods; and the dealers are greatly benefitted by the increased inquiry from this intelligent use of printer's ink. "Stevens" certainly know how to do it.

♦

Among the popular household appliances manufactured by Matt. Redlinger, Freeport, Ill., the National Clothes Drying Rack is meeting with such approval as to commend it to the dealer who is increasing his assortment of useful specialties. It is strongly made and neatly finished. The handle and arms are fastened in an iron casting which has a double line arm that is pivoted in the same. The lower end of these arms pivot in the lower end of the wood block which is screwed to the wall. By tilting the handle forward it unlocks, allowing the rack to lower 26 inches.

♦

The Dean Linseed Company, 100 William Street, New York City announced under date of October 7th their willingness to allow $1.10 each for empty Linseed oil barrels if delivered at New York in good condition.

The Hardware firm of Wood & Menagh, Jersey City, N. J., has been dissolved by the retirement of the senior partner, George A. Wood. John S. Menagh, having purchased Mr. Wood's interest, will hereafter conduct the business under the style of the John S. Menagh Company, under which name the business has been incorporated, with a paid-up capital of $70,000. The business has been established 28 years, and has made steady progress each year of its existence under the successful management of the firm, handling as they did Hardware, Paints, Oils, etc., House Furnishing Goods, Factory, Contractors' and Steam Fitters' Supplies, etc. The programme for the future contemplates the addition of several analogous lines which will increase the importance of the business.

♦

The Runskool Metal Company, manufacturers of babbitt and anti-friction metals, removed their factory and headquarters from New York City to Buffalo, N. Y., the company having been reorganized and reincorporated by Buffalo people. Warran P. King is president, and the factory of the company is located at 1310 Niagara Street.

THE DANDY SINK CLEANER.

In the interest of cleanliness and healthy surroundings, the Dandy Sink Cleaner, manufactured by John W. Sudlow, 986 Halsey Street, Brooklyn, N. Y., is reaching out for foreign trade as well as the home circuit. The way the foreigner gets Americanized through our numerous salable specialties is well calculated to keep us within the group known as the World's Powers. Even the Dandy Sink Cleaner may keep "the open door" from closing.

REEDER'S AMERICAN COLD JAPAN.

A product called Reeder's American Cold Japan is being quite generally handled by Hardware dealers as it is said to make an excellent coating for galvanized iron and one of the best roof protectors ever discovered. It is easily applied with a brush, like ordinary paint and on metal roofs, sidings, bridges, iron fences, etc., is recommended by those who have used it from ten to thirteen years in the highest terms. For further particulars address John S. Reeder, Union Trust Building, Cincinnati, Ohio.

CENTURY CASH REGISTER.

The Century Cash Register, manufactured by the Century Cash Register Company, Detroit, Mich., is producing a cash register at a reasonable price that, judging by their numerous testimonials, gives universal satisfaction. The company is making an introductory offer in addition to sending their register on seven days' trial, that may interest you. Write for particulars.

NEW BUILDINGS REQUIRED.

The New England Enamelling Company, of Middletown, Conn., are already adding new buildings for their retinning, galvanizing and coarse tinning departments, finding their facilities at this stage of their career unable to keep pace with their orders. With this additional area they will be able to make prompt shipments.

IF YOU WANT TO KNOW ABOUT SLATE.

David McKenna, manufacturer and shipper, Slatington, Pa., in a 24-page booklet gives considerable information about slate. It is full of interesting information for contractors, builders and roofers. In the publication is expressed the belief that slate will yet be universally used for roofing in this country. The book will be mailed free on application.

HARDWARE

VOL. XXVIII. OCTOBER 25, 1903. NO. 2

HARDWARE is a Review of the American Hardware Market, specially devoted to the Retail Trade.

HARDWARE is published on the 10th and 25th of each month. The subscription is $1.00 a year, payable in advance.

Subscriptions may commence with any issue.

Remittances should always be made by New York Draft, Post-office or Express Money Order.

Register your letters when you remit by cash.

Foreign Subscriptions.—For each copy to be mailed outside the United States the Canadas, and Mexico, the price is $2.50 a year, postage prepaid.

Change of Date.—It takes two weeks to change the date, after your subscription is renewed.

Change of Address.—Always give both your old and new address when you ask us to change your address.

The Name of your Post-office and of the State you live in should always follow your own name when writing to this office. We cannot find your name on our books unless this is done.

Letters should be addressed

HARDWARE PUBLISHING CO.,

A. E. BOLLES, - - - Manager.

The Circulation of "Hardware" is Larger Than That of Any Other Paper in the United States Devoted Exclusively to the Hardware Trade.

Editorial Trade Review.

The reports from our correspondents regarding a continually prosperous trend of Fall business are of a universa satisfactory trade in every direction. The buyers. however, for all classes of trade are watching the signs of the times as to what the future may possibly bring in its train, and conservative estimates are made with no amount of speculation beyond the immediate future and with a frequent replenishing of their wants, the belief being prevalent that changes in the state of affairs, while not apparent at the present moment, may be affected by the turbulent fluctuations of the stock market, in which considerable water is being squeezed out of popular securities with the idea that a settled value will be made that will make a fairly permanent quotation. There are but few changes in Hardware prices that are of sufficient importance to chronicle under the belief that they may affect current quotations to any appreciable extent. What little concession may be gained on material is more than offset by labor demanding some readjustment of a too moderate compensation.

There is a movement now taking place in several important fields of labor looking toward limiting this continual restlessness, which finds no end to the demands of the workman backed by walking delegates and encouraged by sympathetic strikes. No "enterprises of great pith and moment" dare to be undertaken until some settlement is effected that will last until a promoted undertaking can be completed. This has a tendency to make principals cautious in their operations whether they are dealers or promoters.

Some lines of seasonable goods are in short supply, and those factories are pushing their productions with energy and perseverance; but most of the manufacturers know how their facilities have been increased so greatly, that without sustaining orders they could readily have an over production that would embarrass them, and so even he manufacturer feels the necessity for being cautious as to purchases of material in the present state of the markets and the somewhat uncertain outlook for 1904, thus keeping production down to a normal level. The retail trade being nearer the consumer is more apt to know whether the large crops blessing some sections of the country, encourage the dealer to keep up his average assortment of popular supplies; or whether in the industrial towns the strikes and other influences have so unsettled the steady demand for special tools and similar requirements, as to handicap the sales of these profitable lines

Under unsettled conditions that have a tendency to cause the trade to relax the persistent energy which has characterized their efforts for several seasons, it is a matter of congratulation that the merchants may generally withstand fear of disastrous results, take counsel with themselves, and consider well of the future recognizing the wisdom of not overstocking, and keeping well within the line of conservative conditions of traffic, governing themselves as to their future requirements in accordance with the prospects that locally develop.

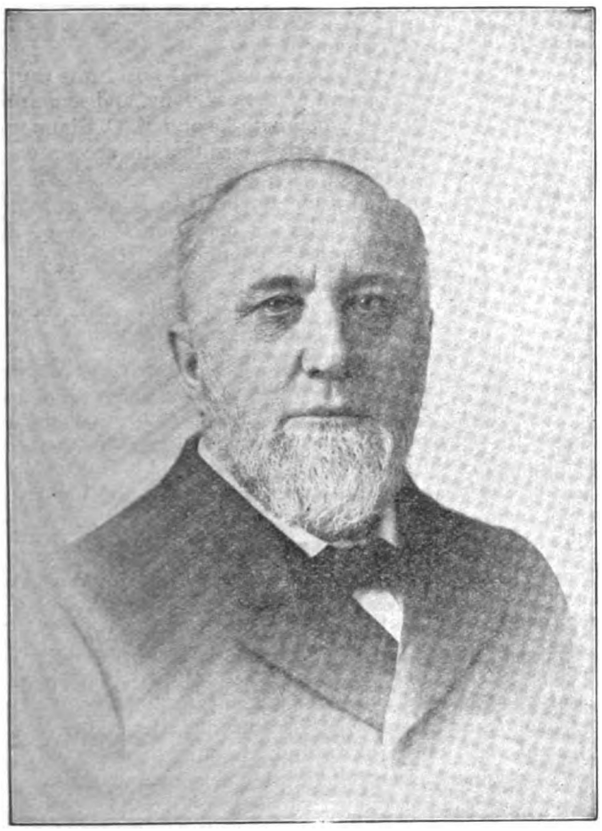
OUR TRADE WITH JAPAN.

Imports into Japan from the United States for the first time exceed those from the United Kingdom. In the six months ending with June, 1903, the imports into Japan from the United States were 24,950,493 yen, against 23,803,656 from the United Kingdom. This is the first annual or semi-annual period in which the imports from the United States into Japan have exceeded those of the United Kingdom. In 1881 the imports into Japan from the United States were less 2 million yen, against more than 16 millions from the United Kingdom; in 1891, from the United States a little less than 7 million yen, against 20 millions from the United Kingdom; in 1900, 62 million yen from the United States, against 71 millions from the United Kingdom; in 1901 and 1902, following the increase in the Japanese tariff, the total imports into that country showed a considerable reduction, and as a consequence the imports from the United States in 1902 were but 48,652,824 yen, against 50,364,029 yen from the United Kingdom. In the six months ending with June, 1903, the imports from the United States were 24,950,490 yen, against 23,803,654 yen from the United Kingdom. In 1881 the United States furnished less than 6 per cent. of the imports into Japan and the United Kingdom furnished over 52 per cent. In 1902 the United States furnished 17.9 per cent. of the total imports and the United Kingdom 18.5 per cent., while in the six months ending with June, 1903, the United States supplied 15 per cent. of the imports into Japan and the United Kingdom 14.3 per cent.

One cause of the reduction in imports from the United States into Japan since 1900 is the fact that that country is in recent years buying more largely of her raw cotton from India. The total value of imports into Japan from India has grown from less than 8 million yen in 1892 to 49 million yen in 1902, and in the six months ending with June, 1903, was 39,690,954 yen. The importations of ginned cotton into Japan from the United States amounted in 1900 to 1,112,834 piculs and in 1902 to 721,800 piculs, while from India the imports of ginned cotton in 1900 were 739,073 piculs and in 1902, 1,768,189 piculs. The value of imports of raw cotton from the United States in 1900 was 27 million yen and in 1902 19 million yen, while that from India was, in 1900, 17 million yen, and in 1902, 39 million yen.

This partial transfer of the cotton trade of Japan from the United States to India accounts for the fact that the percentage which the United States supplied of the total imports of Japan in 1902 and the first half of 1903 was less than in 1900, in which year we supplied 21.96 per cent. of the total imports of Japan.

The picul is equivalent to 133 pounds.



The value of the yen, since 1898, is 49.8 cents.

DEATH OF WILLIAM G. HIBBARD.

William G. Hibbard, president and one of the founders of the firm of Hibbard, Spencer, Bartlett & Co. and a pioneer in Chicago's business life, died at his home, 1701 Prairie Avenue, Chicago, Sunday, October 11. He had been a sufferer from kidney troubles for about twelve years, and three months ago acute Bright's disease supervened.

Notwithstanding his failing health and advanced age, 78 years, Mr. Hibbard continued to go to his office daily until four weeks previous. A week later he took to his bed, never to rise. Friday afternoon hypostatic pneumonia set in and was the immediate cause of his death. He sank gradually, and was conscious within a few minutes of his peaceful death. The end was not unexpected, and his entire family was with him in his last moments.

WILLIAM G. HIBBARD.

William Gold Hibbard was born in Dryden, N. Y., Aug. 7, 1825, and was the son of Joel Barber Hibbard and Eliza Gold Hibbard. His boyhood and youth were spent in the towns of Dryden, Homer and Cortland, N. Y. In 1849, when 24 years old, he was seized with the "western fever" and obtained a clerkship in the Hardware store of Blair & Stimson, arriving in Chicago, Aug. 8 of that year, and began work the same afternoon. His previous work had been only in a general store, and his knowledge of the Hardware business was extremely limited.

But what he lacked in experience he made up in energy and adaptability, and it was not long before he was made head salesman, then buyer and general manager of the store. The first year he was with the firm he received a salary of $300 and his board. The second year he was paid $600. He remained with the firm six years, when he entered the new firm of Tuttle, Hibbard & Co. This firm consisted of Nelson and Frederick Tuttle, Mr. Hibbard and George M. Gray, Mr. Hibbard and Nelson Tuttle being the active partners. Their store was on South Water Street, between Wabash Avenue and State Street.

The place was burned in the fire of March 2, 1857, but with characteristic energy the firm was installed within a few days at 32 Lake Street. The firm was then confronted by the panic of 1857 and the financial depression that followed it lasted for nearly four years, but was weathered successfully. In 1860 the firm moved to 62 Lake Street.

In 1864 Mr. Gray retired and the next year Mr. Hibbard and F. F. Spencer purchased the interests of Nelson and Frederick Tuttle, changing the name to Hibbard & Spencer. The concern moved to 92-94 Michigan Avenue in 1871, adding a story to the building, and had just reopened for business when the great fire of 1871 came. The two partners and their employes made the greatest efforts to save their books and stock and partly succeeded. The books were taken to Mr. Hibbard's home and most of the stock was stored on the lake front.

Mr. Hibbard lodged and fed more than fifty homeless boys at his residence after the fire.

General Sheridan, in command at Chicago, asked Mr. Hibbard to assist in guarding the Illinois Central tracks from Sixteenth to Eighteenth Street, and the fifty boys whom Mr. Hibbard sheltered were armed with long butcher knives from the rescued Hardware stock and were posted on guard duty.

Within a week after the fire the firm had erected a one-story warehouse and store on the lake front near Washington Street, had telegraphed East for a new stock and was ready to take advantage of the opportunities offered by the great rebuilding work that followed the fire. It remained in its improvised quarters until June, 1872, when it moved into the building on the northeast corner of Wabash Avenue and Lake Street, which it occupied, with various additions, until last year. The company then moved into its new building on the river front between State Street and Wabash Avenue. In 1874 A. C. Bartlett and other old employes of the firm were taken into partnership, and the name was changed to Hibbard, Spencer & Co., and in 1882 more employes were made shareholders, and the firm was incorporated under its present name. Mr. Hibbard being its first president, and continuing to hold that office since.

The concern has become one of the largest wholesale Hardware houses in the United States, and though it has encountered in its long career four financial panics and two conflagrations, it has always recovered and gone on with credit unimpeached. To the far-sighted business policy, the integrity, liberality and energy of the man who has just passed out, do Mr. Hibbard's business associates attribute the steady growth and success of the house of which he was the last surviving founder.

Prosperity never spoiled William G. Hibbard. In his strict adherence to honest purposes he was alive to the efforts of his fellow workers and employes, and strove, by offering them inducements to become stockholders, to share his good fortune with those who helped to bring it.

His charities were large, but carried on quietly and in the direction of real service to the unfortunate. Mr. Hibbard was for more than forty years a member of Grace Episcopal Church, and during much of that time a vestryman of the parish. He was president of the Foundling's Home, to which he gave freely; a liberal supporter of St. Luke's Hospital, an old member of the Commercial, Chicago and Union League clubs and of the Chicago Athletic Association; a director of the Illinois Trust and Savings and the Continental National Banks, and, until illness prevented, always an active worker in every enterprise with which he was connected.

He was married in 1855 to Miss Lydia Beekman Van Schaack, a daughter of H. C. Van Schaack of Manlius, N. Y. She survives him, with six children, Mrs. Robert B. Gregory, Mrs. John Buckingham, Mrs. William R. Stirling, Mrs. W. E. Casselberry, William G. Hibbard, Jr., and Frank Hibbard.

At a meeting of the Hardware jobbing trade of Chicago, the following resolutions were adopted:

Whereas, God in His all wise providence has seen fit to remove from our midst William Gold Hibbard, a man for so many years prominent in commercial, philanthropic and benevolent affairs, and who by his loyalty and devotion to duty has endeared himself not only to his immediate associates but to this entire community; be it

Resolved, That the Hardware and Kindred Trades of Chicago and the United States have lost in the death of Mr. Hibbard a man who for more than one-half century has been identified with their interests. As the head of the largest company of its kind in this country, his wise counsel and keen judgment will be greatly missed. Always kind and con-

Digitized by Google

siderate of others, his untiring energy and devotion to right and duty were an inspiration to all who knew him. His well rounded life was spent for all he thought good and best for his family, his business and his city. Members of the trade in this community mourn and feel his loss as that of a friend.

Resolved, That the Hardware Jobbers of Chicago extend to the bereaved family, relatives and associates their sincerest sympathy in this hour of sore affliction; and be it further

Resolved, That a copy of these resolutions be sent the bereaved family and the company of which he was the founder.

DEATH OF RICHARD B. HUNT.

Richard B. Hunt—"Dick" Hunt, as he was known to every one in the Hardware trade, died Sunday morning, October 11th at Mount Vernon, of appoplexy. He had been in the employ of the Charles Parker Company for nearly 37 years, and no one who did business with that company but what knew his genial welcome, his desk being near the door, and ever on the alert he was the first to see the visitor and attend to his wants. He was courteous to a fault, nothing was of too much trouble to give it proper attention. The geniality of his character it will be difficult to match.

DEATH OF MORTIMER C. OGDEN.

Mortimer C. Ogden, one of the oldest and best known Hardwaremen in this city, died last evening at his home, 38 Monroe Place, Brooklyn, N. Y. Several weeks ago Mr. Ogden suffered a stroke of apoplexy. It was followed by two successive strokes, the third terminating fatally. Mr. Ogden was one of the founders of the Hardware Club of New York, of which he was a governor and a member of the Finance Committee since its organization, and of the Hamilton Club of Brooklyn, and of several other political and social organizations, and was also president of the board of trustees of Plymouth Church and one of the most honored and popular men of that organization. At the time of his death Mr. Ogden was in his 72d year. He was born in Middletown, N. Y., and came to New York when 19 years of age, and soon became one of the leading stockholders of the Russell & Erwin Manufacturing Company, eventually becoming manager of that important concern. His successful administration as receiver of and organizer for the Long Island Savings Bank occupied his time for three years. The last twenty-five years he has been president of the Eagle Lock Company, with offices at 105 Chambers Street, one of the oldest stock corporations of Connecticut; being at the same time president of the Southington Cutlery Company. Mr. Ogden was one of the original members of the famous Twenty-Third Regiment, being associated with the regiment in 1861, and was its second captain for several years. He was the first colonel of the Uniformed Veteran Battalion of the Twenty-Third Regiment, president of the Twenty-Third Regiment Mutual Benefit Association for five or six years, and was at the time of his death a trustee of Plymouth Church, on the advisory board as director of several of our most important philanthropies and homes in Brooklyn. Mr. Ogden was of a noble nature and pre-eminently a gentleman of character and integrity; his acquaintance with the Hardware trade of so many years connection, had won for him many steadfast friends; many of them with whom he was intimately associated will miss his genial temperament, his conciliating kindness and that exercise of the high order of his natural abilities which were prominent characteristics. He is survived by a widow and one married daughter.

DEATH OF ISAAC W. MORTON.

Isaac W. Morton, advisory director of the Simmons Hardware Company, director in the St. Louis Union Trust Company, member of the City Council and one of the best known brought her son to St. Louis. His early education was redead on the bed in his room at the Quivre Hunting and Fishing Club, 3½ miles north of O'Fallon, Mo., Sunday evening, October 18. A bullet wound through his head explained the cause of death. Mr. Morton only returned to St. Louis Saturday, October 17, after a two months' stay in the East, where he had hoped to benefit his health. He had been in ill health for seven or eight months.

Mr. Morton was born May 4, 1847, in Quincy, Ill. He was the son of Charles and Rebecca Morton (nee Wyman). Mr. Morton's father died in 1851, and in 1856 Mrs. Morton brought her son at St. Louis. His early education was received in the Wyman Institute, and later he took a partial collegiate course at Washington University, leaving that institution when 17 years of age to enter the employ of the Second National Bank as a collector. Later he filled successfully the position of bookkeeper and teller in the same bank.

In 1865 Mr. Morton entered the employ of Waters, Simmons & Co., later succeeded by E. C. Simmons & Co., and finally by the present concern, the Simmons Hardware Company, with which Mr. Morton was prominently connected, and was, at the time of his death, one of the advisory directors. When the firm of Waters, Simmons & Co. were succeeded in 1872 by E. C. Simmons & Co., Mr. Morton became one of the firm. His rise in the commercial world was rapid. He soon became vice-president of the company, and remained in that capacity until 1898, when both he and E. C. Simmons, the president, retired from active business to accept each the office of advisory director.

Mr. Morton was married June 19, 1877, to Miss Jeannette Filley, daughter of O. D. Filley, at one time Mayor of St. Louis. Mrs. Morton and three daughters, Misses Alice, Helen and Jeannette survive him.

E. C. Simmons, founder, advisory director and former president of the house which bears his name, sent to the employees of the company a glowing tribute to his memory, from which we extract the following:

> "Isaac W. Morton entered into rest Sunday, October 18. My heart is torn and bleeding. If tears would avail this page would be watered. He was my brother—my friend—my companion—my business intimate. A nobler man I have never known. Those who lived and day by day worked by and with him, know as none others ever will the breadth, the hight, the depth, the generosity, the sympathy and charity embodied in him. He was one of the best of all God's creations—a man who realized that he was here for the good he could put into the world and not for what he could get out of it; a sweet, strong, forceful and gentle nature; battling always for the right and with unlimited courage; possessed of a judgment almost invariably correct and a perseverance seldom equaled; loyal to his friends, generous to his foes. Enemies he had none; friends he counted by scores."

DEATH OF OLIVER S. JUDD.

Oliver S. Judd, of New Britain, Conn., died on the 17th inst., aged 87 years. Mr. Judd was one of the earliest pioneers in the manufacturing industries of New Britain. He was born November 30, 1816.

NEW ENGLAND HARDWARE DEALERS' ASSOCIATION.

The monthly meeting of the New England Hardware Dealers' Association was held at the United States Hotel, Boston, Wednesday evening, October 14, President Sayward in the chair. The records of the May meeting were read and approved. About 40 members were present, and after the dinner the president introduced the speaker of the evening, Hon. Horace G. Wadlin, Librarian Boston Public Library. Mr. Wadlin's remarks were identified with several topics, which possessed considerable interest for those present, and he was given an unanimous vote of thanks. During the dinner popular music was played by Daggett's orchestra.

Secretary Farless took occasion to allude to the death of George T. Carter, the oldest Hardwareman save one in Boston, who died at Somerville, Mass., October 13, at the age of 84. Mr. Carter was highly respected by the trade and retired from business only a few years ago.

The next meeting of the association will be held on the second Wednesday in December, and will be observed as Ladies' Night. The Committee of Arrangements are Samuel H. Thompson, Myron H. Tarbox and James H. Farless.

OUR BRITISH LETTER.

(From our Special Correspondent).

London Oct. 13th, 1903.

I. F. A. EXAMINATIONS.

The Ironmongers' Fererated Association are looking forward to their first examination of assistants which is to take place in a few months. It is to be held in Manchester and will be somewhat experimental in character. The General Secretary of the I. F. A. informs me that he has had many

The Ironmongers' Federated Association are looking for-applications for prospectuses and copies of the syllabus recently issued, and he has every reason to believe the first examination will be well attended, and that many will offer themselves for examination. The scheme is a progressive one, and one which it is hoped will tend toward greater proficiency on the part of the English Hardware assistants. It certainly should call forth the energies of intelligent young men and bring out their applications, thereby enhancing their value to their employers. The first examination will consist of papers on sixteen subjects, some of which are elementary, but all essential in the satisfactory conduct of an ironmongery business. Twenty-one other subjects are given as optional and as these relate to technical matters and branches of the trade not always practiced by the average ironmonger, doubtless comparatively few will enter for competition. Other matters entered as optional such as "A knowledge of rain water goods," "Kitchen ranges and stoves," "Guns," "Cycles," "Scales and Weights," etc., are regarded by many as essential matters which ought to be included in the compulsory subjects. The result of the examination is looked forward to with interest by all supporters of the Federation movement and those who wish to see a better state of proficiency among ironmongers' assistants.

PROGRESSIVE IRONMONGERS.

There is a marked improvement in the arrangement and construction of modern ironmongery premises and a noticeable assimilation toward American principles. Many of the new buildings have more pleasing architectural appearances and are rendered attractive by handsome wrought copper signs and ornamental wrought ironwork. The importance of catching the eye by an attractive exterior is now generally recognized and the tendency is towards a high state of decoration rather than attraction by stiff and ugly advertisement boards, huge name signs, and such like efforts once thought to be the only means of attracting passers by. A Welsh firm of ironmongers have just opened a splendid building at Swansea, fitted up on American lines, and the ceilings of the shop and showrooms are embellished with embossed steel. The most curious feature in connection with which is, that the steel sheets were rolled in Swansea—almost within a stone's throw of the building in which they have just been placed—after having crossed the Atlantic twice and passed through an American factory where the beautiful embossed designs were added. The opening ceremony in connection with this new ironmongery emporium was quite novel and thoroughly in keeping with the progressive firm of ironmongers who have just opened the premises. The Mayor of Swansea officiated at a public ceremony and the entire building, beautifully decorated and its contents effectively displayed, was inspected by upwards of 4,000 persons who visited the premises on the opening day.

INCANDESCENT GAS LIGHTING.

British ironmongers have taken up the sale of incandescent gas-light fittings and accessories with a considerable amount of spirit, and many who scarcely touched the gas fitting business before the introduction of incandescent gas lighting, are now carrying on an important business in this departmet. There are many makers of incandescent burners and fittings, some good, some bad, and some indifferent, but by careful selection, testing experiments and cool judgment, retailers are able to place in the hands of their clients thoroughly reliable mantles and fittings. Electric lighting is not so generally adopted in Great Britain as it is in America and comparatively few private houses are lighted by electricity, the majority of persons remaining content to use coal gas, the light from which has been so greatly enhanced by the principle of incandescence. The season for the sale of these goods is now at its height and many brilliant window displays may be seen in the leading provincial towns of England. The sale of petroleum lamps and other lighting appliances is one of the chief features in a British ironmonger's business during the winter months. There is some enquiry for portable oil stoves and heating apparatus but so far the autumn weather has been mild and a sharp spell of frost is needed to give impetus to the heating stove trade.

THE ORIGIN OF THE TOOLS AND THE LOCAL PREJUDICE.

Some interesting notes in reference to the peculiar forms of agricultural tools and some of the simpler implements and workmens' appliances, have recently appeared in one of the leading British magazines. It is a matter that has frequently occupied the attention of Hardwaremen, and the manner in which local types of implements and machines influence the sales of those specialties in certain districts, affords much food for reflection. American manufacturers of implements and agricultural tools have long recognized the fact that tools suitable for use in America are totally unsuited for sale in this country. This has frequently been put down to local prejudice and it is a common practice to ascribe the difficulty of introducing new goods in certain districts to local peculiarities and prejudices. The notes to which I refer bring out strongly the fact that rustic farm laborers and rural workmen are by no means ignorant of the forms of tools specially adapted to the local peculiarities of their district. What may be ascribed as "rural technique" is an acquired knowledge, the result of many generations of agriculturists and workmen who have gradually learned the forms of implements and tools best adapted to their work and to the materials which they have to employ. This rural technique naturally influenced local makers and contributed in no small degree to the form of agricultural implements and tools, the greater portion of which were formerly made by local blacksmiths and wheelwrights in different parts of rural England. Some of these men earned for themselves names and a popularity which travelled far beyond their own narrow limits, and, in consequence of the widespread popularity, some of these firms still exist, although scarcely recognizable in the great limited companies and manufacturing concerns which are but the outcome of a steady upward growth of the once small and unimportant country workshops. These makers grasped the true form best adapted to the tillage of the soil, and it is only those manufacturers who have closely followed these old patterns, who have been enabled to plant their goods with so great success. Many American manufacturers have failed, inasmuch as they have not followed closely what to them appear antique patterns, but which British workmen have learned to consider as the height of perfection. On the other hand some American firms have followed British patterns closely, and their tools, which are of undoubted quality and finish, are exceedingly popular in this country and are found in Hardware stocks, side by side with English made goods.

THE AMERICAN MEETING OF THE IRON & STEEL INSTITUTE.

British engineers are much interested in the proposed visit of the Iron & Steel Institute to America next year. The invitation, given by the American members of the Iron & Steel Institute, was gladly accepted at the recent meeting at Barrow-in-Furness. The invitation was a fitting compliment to Mr. Andrew Carnegie, and fully appreciated by British manufacturers and merchants. Doubtless the meeting, which will take place in October, 1904, will be well attended, and it is fully anticipated that American hospitality will be extended

Digitized by Google

in a liberal scale to the members of the Institute. Doubtless many members will take the opportunity of visiting the St. Louis Exhibition and of seeing over some of the great American manufactories, commercial buildings, and works.

AMERICAN AND ENGLISH METHODS OF BUSINESS.

A recent issue of the *Magazine of Commerce* contains an interesting article entitled "American vs. English Methods of Business." The writer compares the business habits of the two nations somewhat to the advantage of Americans. The strong point brought out in the book is that accessibility to the presence of the merchant princes of the States which stands out so conspicuously in contrast to the difficulty experienced by commercial men and business visitors to the great men in this country. The difficulty of approaching the principal, especially when matters of importance make it so necessary that the right construction may be put upon motives, reasons and causes, and when true facts can only be ascertained by a personal interview. Unfortunately it is too true that the average business man in England prefers to conduct his affairs, even those of weight and importance, through the medium of others or by correspondence. The same principle prevails in a lesser degree among retail traders, and commercial travellers experience great difficulty in approaching the principals of comparatively small concerns. Doubtless much valuable information is lost by this conservative reticence, which prevents the average business man from seeing and hearing for himself the true facts of matters which can be settled in a more satisfactory manner by personal touch between the interested parties. It is proverbial how readily Americans grasp important matters and decide quickly on the merits of the case presented before them. Doubtless the habit of quick and prompt decision has been arrived at by long practice and experience, and until English commercials and business men learn to act with as great promptitude as their American cousins and to condense in a few words the pith of the whole matter, there will always be a reluctance to give audience which may result in a long argument and loss of time. In these days of pressure of business and an ever increasing tendency to rush through more work in the same length of time, there must naturally be a sharpening of wits and a greater promptitude of decision in all business matters. The Americans have undoubtedly cultivated this valuable gift to a large extent.

MUTUAL FIRE INSURANCE IN MINNESOTA.

M. S. Mathews, the secretary of the Minnesota Retail Hardware Dealers' Mutual Fire Insurance Company, announces to the trade in his State that

> "The articles of incorporation of the Retail Hardware Dealers' Mutual Fire Insurance Company, having been amended to conform to an enabling act passed by the last legislature, it is hereby announced that, in addition to its previous business this company is now prepared to write insurance on the residences and household goods of its members. It is hoped that the members will avail themselves of its provisions."

At the last session of the Minnesota legislature, the changes were formulated and adopted that enable the company to do this, and at the last meeting of the board of directors Secretary Mathews was authorized to make the above announcement, and the old line policies as fast as they expire are renewed in the "Mutual."

LEFEVER ARMS CO.'S CATALOGUE.

The Lefever Arms Company, Syracuse, N. Y., have recently added to trade literature a very attractive catalogue which forms an oblong pamphlet of 32 pages, printed in two colors, the typographical appearance of which alone would insure its preservation. Referring to the fact the Lefever gun does not "seek the trade to whom cheapness in price is the main consideration." They give the points of excellence of this arm in the following language:

"The Lefever is the only gun built with compensating action, making possible the taking up of wear at all points and increasing indefinitely the life of all our guns. At such points in our guns where the tendency to wear and strain is greatest will be found materials of the greatest resistance, all properly distributed so as to best overcome such action. Careful consideration has been given the subject of distribution of materials throughout our guns, with the result that they are unequalled in points of pleasing outline and nicety of balance. All grades of Lefever guns are bored on the taper system, giving the maximum of penetration and absolute evenness in shot distribution. They are built and bored for either Black or Nitro powder, handling either with equally satisfactory results.

LEFEVER ARMS CO.'S "B GRADE" GUN.

Our guns are made from the highest grade of material and with the best of tools and machines, all parts being subjected to accurate gauge tests, and every gun being hand finished by the most expert of skilled workmen. We have introduced medium price guns to meet a demand, but they are in every way first-class, durable, accurate shooting guns and will in no way detract from Lefever reputation, now so well and widely established and which we shall continue to zealously guard."

We present an illustration of B. Grade which is a popular one with sportsmen furnished with English, Damascus or Krupp steel barrels, and is of superior style and great strength. The gun is fitted with a handsome English walnut stock, straight grip, one-half pistol or full pistol grip, horn cap, gold plated triggers, horn butt plate. It has the Lefever full compensating action, and is listed at $200. It can be furnished in ten, twelve, sixteen and twenty gauge. The catalogue will be found of importance to those handling high grade guns.

The Automatic Wringer Co., of Muskegon Heights, Mich., manufacturers of the well known line of Automatic Clothes Wringers, on Oct. 2d increased their capital stock to $100,000. This was deemed necessary by the stockholders to take care of their ever increasing business. The company will put up another addition to their plant and install several special and up-to-date machines. General Manager M. P. Janisch stated that although they turned out a large volume of goods during the past season, they find themselves several thousand wringers behind this day, and that with the increased facilities the company will be in position to take on a larger volume of business and give orders prompt attention.

MIDDLE WESTERN HARDWARE TRADE.

(From our Traveling Correspondent).

The outlook in the middle west for winter business is good. The corn crop is better than has been reported, cattle and sheep are bringing fair prices, and the farming interests throughout the west generally are in good condition. There is a good movement of Hardware and building supplies into the country and payments by the country trade are more prompt than during the Fall of 1901 or '02. There is no reason to doubt but that the winter trade in Hardware will be fully up to that of a year ago.

Omaha is one of the great gateways of the west. As a shipping point it is unsurpassed, and controls and will control much of the middle western trade. From Omaha the salesmen of the Lee-Glass-Andreesen Hardware Co. reach out into the far west and up into the extreme northwestern country.

Another up-to-date jobbing Hardware concern of Omaha is the Wright & Wilhelmy Co. This firm are constantly increasing their lines and branching out for new trade. A line of sporting goods has recently been added to meet the demands of their trade for these goods. There is more building at the present time taking place than ever before in the history of the city.

The Dunning Hardware Company are located in the centre of the present retail district of Omaha and cater to the best builders and shelf Hardware trade. The store of the Dunning Co. is well arranged and well stocked, the shelving running from the floor to the ceiling, thus giving it an appearance of completeness. A fine line of cutlery and tools is also carried by this concern and an extensive business is done in this line.

In speaking of the large western distributors one would be obliged to mention the Empkie-Shugart-Hill Company of Council Bluffs. The success of this concern has been most marked. Starting as they did only a comparatively few years ago as a retail Hardware store and to-day covering a trade of Iowa, Nebraska and South Dakota thoroughly. The Empkie-Shugart-Hill Company carry only the best of goods and their customers seem to appreciate this fact. This concern recognizes the fact that the retail Hardware store is fast becoming more of a general store and to meet this increasing and expanding trade many new lines of goods are constantly being added. By this and other up-to-date methods the firm are not only holding but are fast increasing their business.

A large double store is occupied by Swaine & Mouer, both members of the firm being practical Hardwaremen, a very good retail trade is carried on. An up-to-date and attractive sign is used by this concern, being a large crescent and owl. A motto that is known to all users of Hardware in Council Bluffs is, "When you want Hardware come to the store under the sign of the Crescent and Owl." The arrangement of the store is especially good, the shelf Hardware being shown in up-to-date glass covered cases. Prisms being over the upper part of the window, the store is very light. In addition to a general line of Hardware, stoves and furnaces are carried and a large business is done in this line.

Another large retailer of Council Bluffs is the Peterson & Schoening Company, who in addition to Hardware, stoves and sporting goods, carry a large line of crockery, furniture and house furnishing goods. The establishment of this concern occupies five stores. The firm's motto is "The best goods in the market for the lowest money," and by constant effort the firm endeavors to carry this motto at all times into its business.

One of Kansas City's most progressive retail Hardware concerns is the Bunting-Stone Hardware Co. The new store of this firm is now located on Delaware Street in the building formerly occupied by the Gille Hardware Co. Mr. Stone said that the business had grown very materially since moving, and that the outlook was very good. Continuing, Mr. Stone further remarked: "Our business is largely with the contractors and builders, although we are now doing quite a little jobbing business, which we hope to increase in the future." A very good line of tools and cutlery is carried, as well as a general line of builders' Hardware and contractors' supplies by the Bunting-Stone Hardware Co.

By far the largest Hardware house in Kansas City, is the Richards & Conover Hardware Co., which concern do an exclusively wholesale business. The new warehouse of Richards & Conover Co. was completed early in the year and is now occupied by the firm. This warehouse is a model for convenience and arrangement and with the firm's perfect organization gives the Richards & Conover Co. a great advantage in filling and shipping orders.

In referring to local business conditions, one of Kansas City retailers said: "We are not looking for any boom out here, and have no boom now, but are just as busy as it is possible for us to be. There is more building and more improvements going on to-day than there has been for many years; hardly a vacant store or dwelling in the entire city, and I tell you if things were going in some cities as they are here, there would be brass bands out every day. We had boom times once, but hope never to see them again." Good steady growth and development of the great southwest is fast making Kansas City, Mo., one of the great distributing points of the country.

As a Hardware center there are few cities along the river that do more business than St. Joseph, Mo. Here the Wyeth Hardware & Mfg. Co. have their big establishment, employing 65 traveling salesmen, and covering the entire western country. In addition to the lines carried by every up-to-date Hardware jobbing house, the Wyeth Hardware Co., do an extensive business in saddlery goods and cutlery—in this latter line a more complete stock is probably carried than by any other Hardware concern. The standard of their trade-mark goods has always been kept up to the highest mark.

The retail establishment of the Neudorff Hardware Co. is one of the oldest Hardware stores of St. Joseph. The store has rear windows and is so arranged that a very good effect is given upon entering, the store being light and airy and attractive.

The McDonald Hardware Co. is the concern of St. Joseph that makes a specialty of shelf Hardware. A fine trade has been built up by courteous treatment and by handling reliable goods.

Both a wholesale and retail business is done by the Burgess Frazer Iron and Hardware Co. This firm carry as complete a line of farm tools and heavy Hardware as is found in St. Joseph. Another concern carrying on both a retail and local jobbing trade is A. T. Whalen. Mr. Whalen said that business was up to any former year, and that the country trade was constantly increasing.

One of the old reliable jobbing houses of St. Louis is the Witte Hardware Co. For many years this firm has enjoyed a constantly growing trade until to-day the trade mark, "IXL," as used by the Witte Hardware Co., is known throughout the entire West and Southwest. Their brand of "IXL" when seen on an axe or hammer, a plane or chisel is known to represent the best of its kind, and is accepted by the trade as the very highest grade. The policy of the Witte Co. has always been never to sacrifice quality for price on its trade mark goods, and the firm are now receiving the benefit. In addition to a complete and general line of Hardware the Witte Hardware Co. do an extensive trade in sporting goods, which department is in charge of P. Byrne.

Among the growing concerns in the Chicago trade is the Trout Hardware Co. who are successors to Geo. W. Trout & Co. To better take care of their increasing trade the Trout Hardware Co. are now located in a large five-story warehouse at 174 and 176 Lake Street. To meet the larger and more varied demands of the retail Hardwareman this concern are adding a number of new lines of goods and have in preparation a large. complete general Hardware catalogue.

The Bullard & Gormley Co., of 78 Randolph Street, carry an extensive line of shelf and Builders' Hardware and cater to a fine retail trade as well as a local jobbing business. Mr. Gormley said that trade was good and that the wholesale business was constantly growing. The retail store is attractively arranged and goods are well displayed.

The S. J. Stebbins Hardware Co., of 74 Van Buren Street, are doing some very novel advertising. One of this firm's ads. as seen in many places reads thus: "If its Hardware and you can't get it at Stebbins', you can't get it in Chicago." And although the stock carried by the Stebbins Co. is extensive, still the store is so arranged that there is not the mixed look about the place that often is noticeable in some Hardware stores.

A large retailer of general Hardware is the Orr & Lockett

Digitized by Google

Hardware Co., of 71 and 73 Randolph Street. A very fine line of cutlery and house-furnishing goods is carried by this concern. A special effort is made in window display advertising and very attractive displays are shown in the large double windows.

Wallis, Robinson & Co., of 202 Lake Street, are practically manufacturers' agents, carrying ten distinct lines of goods. A very attractive line of knives is shown by this concern, and is meeting with a large sale. The display boxes for pocket cutlery are especially good, the sample being held on the box by a small spring, the knives being sold from the box, the sample is not handled and does not become rusty. The line of cutlery and patent display boxes are the product of a Rochester, N. Y., maker.

BISSELL EXHIBITS.

Conspicuous in the display shown herewith is the exhibit of the Bissell Carpet Sweeper Co., who for twenty years have never lost an opportunity of showing their goods in expositions of note throughout the world. This company has participated in the Oriental exposition just closed at Osaka, Japan (picture of the exhibit shown herewith) and the company have just received official notice from the Imperial Commission of Japan, with diploma bearing the official seal of the Japanese government. Diploma reads as follows:

Osaka, Japan,

The Bissell Carpet Sweeper Co.,
Grand Rapids, Mich., U. S. A.

Dear Sirs: We, by order of H. I. H. the prince Kitchito, President of the Fifth National Industrial Exhibition of Japan, hereby express our thanks for the valuable display of the above mentioned articles which proved to be special object lessons to our people, in the Foreign Samples Building of the Fifth National Industrial Exhibition held in the 36th year of Meiji.

Baron Tosuke Hirota, Vice-President of the Fifth National Industrial Exhibition.

The first day of the 7th month of the 36th year of Meiji.

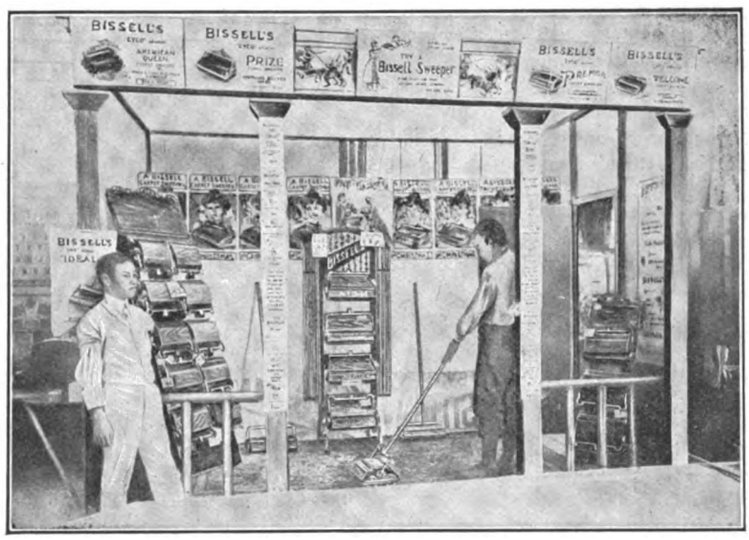
Accompanying the diploma, was a very interesting letter from the Bissell Carpet Sweeper Co.'s representative at Osaka, and we publish same herewith:

Osaka, Aug. 1st, 1903.

The Bissell Carpet Sweeper Co.,
Grand Rapids, Mich., U. S. A.

Gentlemen: I have the honor of informing you that the jury named by the Imperial Commission of the Exposition of Osaka, has classed your exposition "Hors Concours" (beyond competition).

This jury was composed exclusively of Japanese, learned and competent, but too modest to permit themselves to judge your carpet sweepers. Besides, it would have been difficult to unite the elements necessary to form an Independent International Jury, while combining the desired ability.



The diploma in Japanese which I shall send by mail, and the letter enclosed, constitute, then, an award named "Hors Concours." This title is superior to the diploma of honor, gold medals, etc. I shall remain in Japan several months longer, and until I send you a cable announcing my departure, please write me as follows: P. J. Pierson, fils, care Mr. Masuyama, Tengachaya, near Osaka, Japan. I hope that you will be satisfied with the result, and pray you accept my sincere greetings.

E. J. Pierson.

The Bissell Co. has also secured the highest awards in the following notable Expositions:

National Mechanics Charitable Association, Boston, 1884, 1885, 1886, 1887, 1888, 1889, 1890, 1892; Anglo-Danish Exposition, London, 1888; Paris Exposition, 1889; Paris Exposition, 1900; Pan-American Exposition, 1901.

The Robertson Electric Company, of Buffalo, N. Y., has increased its capital stock from $20,000 to $50,000, and the plant and storage facilities of the company will be materially enlarged.

BISSELL'S EXHIBIT AT OSAKA, JAPAN.

GERMAN TRADE JOURNALS.

There is no country in the world which has so many trade journals as Germany, writes United States Commercial Agent Ernest L. Harris, Eibenstock, Germany. The trade journal is a powerful organ for bringing producer and consumer and wholesaler and retailer together. What the trade journal accomplishes for the interstate commerce of any one country, certain journals now in circulation are accomplishing for international commerce. The American trade journals on file in the various consulates, chambers of commerce, and other merchant organizations in Europe are unquestionably furthering the interests of our export trade. The advertisements in them may not always produce business at the outset, but they lead to inquiries along certain lines of manufacture which, if carefully answered, lead to the desired trade openings abroad.

LEAD WASHERS OF GREAT UTILITY.

Every indication points to the fact that the use of Lead washers is becoming more universal every day. Corrugated roofing and siding are said to last much longer, and will not leak or become loosened by wind or weather if lead washers are put on the nails used for nailing the roofing in position. The specifications for modern buildings, requiring corrugated and metal roofing, specify the use of lead washers for the nails, as this is the weakest point in roofing, where the metal is punctured, but by the use of the lead washers, a water tight gasket is formed. These washers are being used extensively all over the United States. Littleford Bros, Cincinnati, Ohio, manufacture them and will send samples and prices on application.

NEW GOODS AND SPECIALTIES.

THE GRAND RAPIDS ROLLER BEARING SASH PULLEY.

The Grand Rapids Hardware Company, Grand Rapids, Mich., are manufacturing and just placing on the market a roller bearing sash pulley which they call the Grand Rapids.

The prominent features are the roller bearing wheel and the device for attaching to the jamb. As every pulley is made of a standard size, it is necessary only to bore three 1-inch holes in line, the centers to be ¾-inch apart, or to mortise with any pulley mortiser using 1-inch bits, cutting the mortise 2½

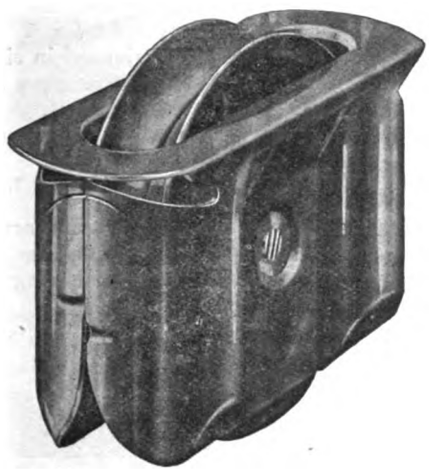

FIG. 1.—THE GRAND RAPIDS ROLLER BEARING SASH PULLEY.

inches long. No counterboring for face plate is necessary and no screws are required to hold the pulley in position. Explicit directions for mortising and attaching the pulley are given, and punches and sets are supplied to all users. The construction of the wheel is a distinctive feature, Fig. 2 showing six steel rollers, which are ¼-inch in diameter, and run on a solid steel axle of the same diameter, making a bearing little subject to wear. The manufacturers state that this roller bearing pulley can carry more weight than any sash cord will support. The stock pulleys are made regularly in polished natural steel, but upon special orders, can be furnished in gun metal, brass, bronze or antique copper finish.

MINIATURE MACHINIST'S HAMMER.

The Davison Mfg. Co., 112 Front Street, Brooklyn, N. Y., among the miniature tools they make to be worn as stick pins or watch charms, are the manufacturers of one in the shape of a ball pein machinst's hammer 1½ inches long. Both the head and handle are drop forgings and they are very accurately proportioned in every detail. They are made in gold, silver and nickel plate, also in silver and oxidized copper, heads and handles alike or with the head and handle of different style of plating.

THE ANN ARBOR LIGHTING SYSTEM.

The Superior Mfg. Co., Ann Arbor, Mich., has published a handsome booklet entitled "Light." The booklet fully illustrates the Ann Arbor lighting system made by the Superior Mfg. Co., and which is claimed to be the most perfect of the many gasoline lighting devices now on the market, which have been so instrumental in introducing this system of illumination into almost every town and hamlet throughout the

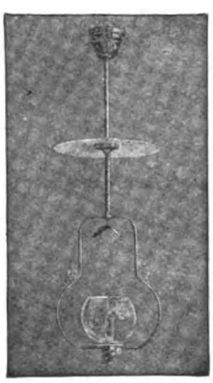

FIG. 1.

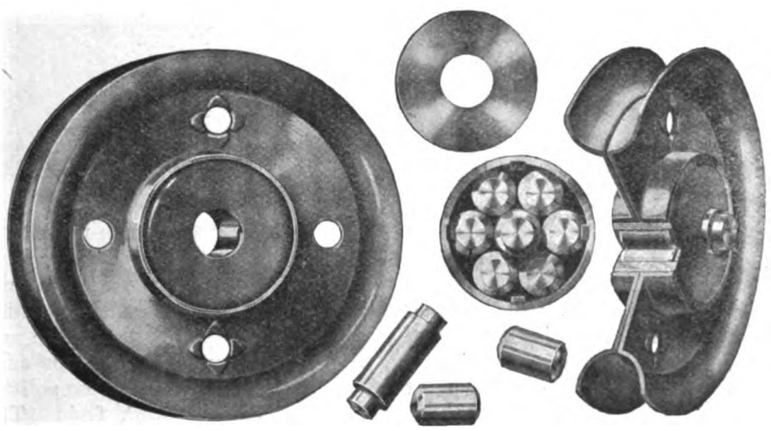
FIG. 2.

United States. The booklet devotes many of its pages to a full discussion of gasoline lighting in general, illustrating the same with a detailed description of the system, aided by fine half-tone illustrations. The Ann Arbor lighting system is artistically and substantially made; the fixtures are very attractive. Cut No. 1 shows a popular style, the light produced being regarded as little less than marvelous in the penetrating quality of the illumination. The company absolutely guarantees the system for a period of two years, but the manufacturers claim that being constructed of brass throughout, a substance not corroded by gasoline, it is just as likely to last a lifetime. This company also makes a full line of individual lamps for use in homes, stores and churches. The cost of installing this system is very small by comparison with any similar method of illumination, and the light produced much brighter and of greater power than either gas or electricity at a small fraction of the cost of either. A copy of the booklet will be forwarded on request, by the Superior Mfg. Co., at the above address.



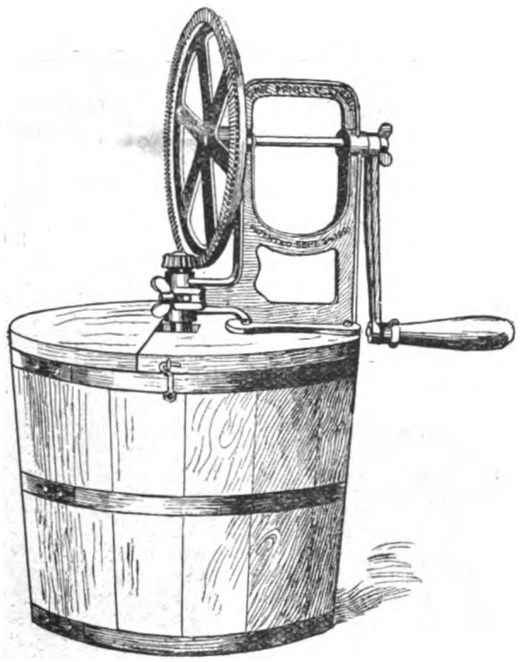


FIG. B.—GRAND RAPIDS ROLLER BEARING WHEEL.

THE ONE MINUTE CHURN.

The One Minute Churn Company, No. 9 Gold Street, New York City, are placing upon the market the One Minute Churn, of which we give an illustration herewith. It is claimed to be the most scientific and practical churn ever invented, as it is capable of producing the best and purest grade of granular butter within the time specified. In the operation it eliminates all casein or albumen which causes all

Digitized by Google

offensive taints and prevents butter from becoming rancid. The churn is quite simple in construction and can be manipulated by hand or motive power. It is made in seven sizes,

ONE MINUTE CHURN.

the smallest one quart being only an industrial miniature size. The regular trade sizes are 1, 3, 5, 7, 9, and 13 gallons. The churn will churn about half the quantity specified, the dasher requiring the remaining space.

NEW GEM SAFETY RAZORS IN CASES.

The Gem Cutlery Company, 31 Reade Street, New York, in preparation for the holiday trade which promises this year to cover a larger field than usual of specialties of a similar

FIG. 1.

character, call especial attention to the handsome manner in which they are putting up the Gem Safety Razors of which we present herewith several illustrations. Fig. 1 shows the New Gem case No. 2, which is one of the most

FIG. 2.

popular of their several styles, being moderate in price and stylish in appearance, consisting as it does of one New Gem Safety frame with adjustable blades. The case is finished in genuine morocco, and is lined with satin relieved by doeskin. The cover has a spring hinge and all metal trimmings are nickel plated. Fig. 2 shows the No. 6 case, which contains one safety frame, two blades, a box of perfumed shaving soap, holder for stropping and honing blades, collapsible shaving brush, comb and cosmetique. In size it is 4¾x4¼x

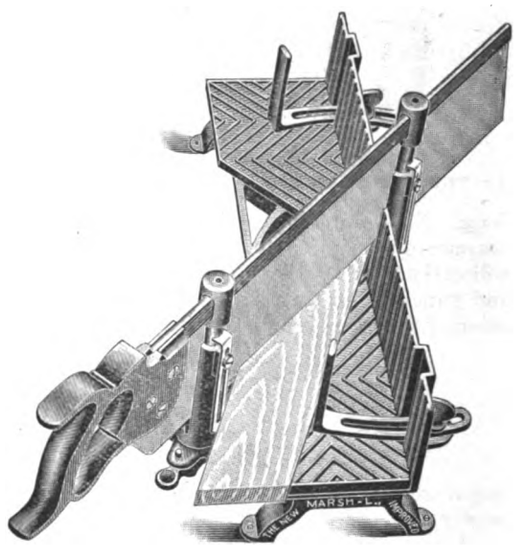

FIG. 3.

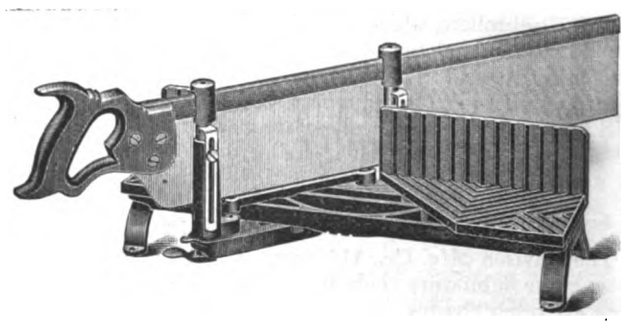
1¾. Fig. 3 shows case No. 7, containing one safety frame and seven blades. In size it is 4¾ x 3 3-4 x 1 3-4 inches. Cases Nos. 6 and 7 are lined and trimmed in similar excellence to case No. 2. A number of other cases arranged in a manner that cover every possible requirement are supplied by the company and described in their catalogue.

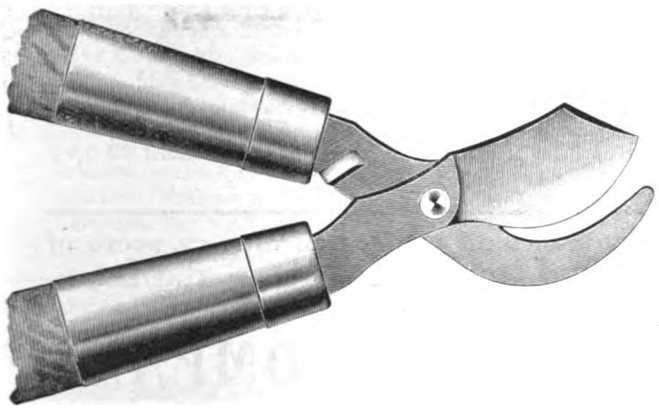


THE NEW MARSH-LANGDON MITER BOX.

H. C. Marsh, Rockford, Ill., is the manufacturer of the new Marsh-Langdon Miter Boxes of which we give two illustrations herewith. The manufacturer having had a num-

NEW MARSH-LANGDON MITRE BOX.

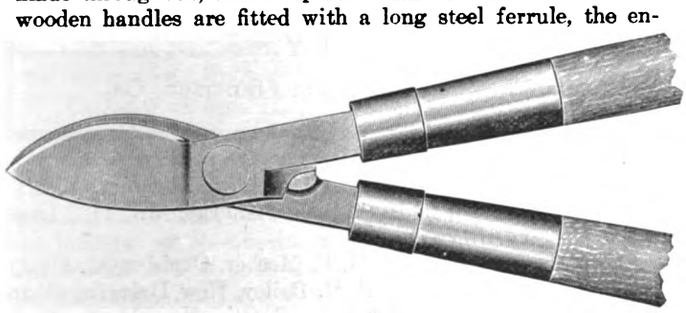
ber of years experience with mitering tools believes he produces an unrivalled article in this to which we call attention. Each box has metal face or bed plates. These plates have ground surfaces, the tops and bottoms absolutely true and parallel—no warping, no splitting off, always a true and level bed plate to work from. The dges of the plates are ground also, and they add much to the general appearance of



the tool, to say nothing of the very material advantage gained in the trueness and accuracy of the work, as well as in the durability of the box. The design or the arrangement of the ribs on the plates is such as to tend to keep the stock from

Digitized by Google

slipping while being sawed. Care is taken that every machine and miter box is tested before leaving the factory, and they are guaranteed to be true and perfect in construction. The saws with these boxes are also warranted and have 12 points to the inch.



SMITH'S NEW PRUNERS.

Seymour Smith & Son, Oakville, Conn., John H. Graham & Co., Sales Agents, 113 Chambers Street, New York, in their new and enlarged catalogue call the attention of the

THE "OAKLAND" PRUNER.

trade to the two new pruners of which we present illustrations herewith. The Oakland pruner has been added to the assortment produced by this concern to meet the demand for a pruner of extra strength that could be relied upon to stand the most severe test. Both blade and hook are made from the best cast steel forged from the bar; they are well made throughout, and tempered with extreme care. The wooden handles are fitted with a long steel ferrule, the entire pruner being constructed in the best possible manner for extended service. The Redlands pruner was brought out to supply a demand for an all steel pruner, somewhat lighter than the one above described, but of equal quality. It has been modeled along the lines of the pruners largely used on the Pacific coast where it has become exceedingly popular. The manufacturers refer to the fact that having greatly strengthened the shanks which go into the wood handles, these pruners are regarded as powerful cutters, as all danger of bending or breaking under severe use is avoided.

THE "REDLANDS" PRUNER.

THE "INDEPENDENT" COMBINATION CLAMP.

R. H. & J. G. Makowsky, New Haven, Conn., are placing before the Hardware and Supply trade a combination clamp. see Fig. 1, which is of improved design and unique workmanship, having a patented jaw that can be shifted either way without lifting the clamp, intended for the use of

FIG. 1.

cabinet, carriage or pattern makers or carpenters or other mechanics. It is claimed that by its operation joints of any description can be glued or clamped in less time than by any similar device. In Fig 2 is given an illustration of the clamp attached to a bench, showing how it may be used as a bench vise, and turn out as good work it is claimed, as on a more expensive cabinet maker's bench. Two malleable slideways and two clamping bolts forming a set, named a bench attachment. Upon receipt of the price, $2.00, cash, with order, the manufacturers will send a sample of this de-

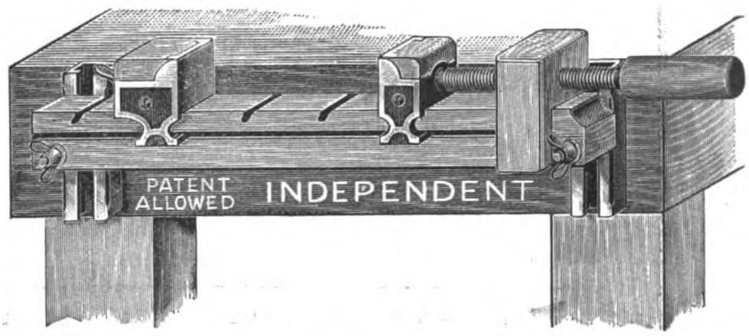


FIG. 2.

vice as in above cut, Fig. 2, and the combination clamp, connected with an ash board reduced in length to 22 inches, highly finished, for practical use, or for salesmen to use in introducing the device. The combination clamps are furnished in the following lengths: 3 feet, 6 inches; 4 feet, 6 inches; 5 feet 6 inches and 6 feet, 6 inches. The well equipped Hardware dealer should write for further information regarding these useful appliances.

HORSE SHOE MAGNET HAMMERS.

Arthur R. Robertson, 144 Oliver Street, Boston, Mass., is the manufacturer of a line of hammers having the especial advantage of possessing a magnet on the face to hold the tack during the operation of using the hammer. This makes a hammer perfect for a number of purposes, among

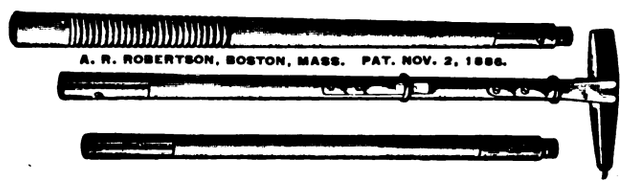

FIG. 1.

which Fig. 1 and 2 show the bill posters or advertisers hammer, which is especially adapted for tacking up cards and

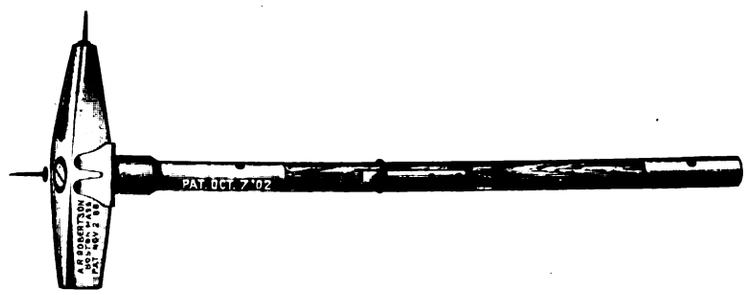

FIG. 2.—BILL POSTERS' HAMMER.

posters, and is claimed to be superior to any other tool made for this purpose. The hammer head and handle trimmings are nickel plated to prevent rusting, at the same time adding

FIG. 3.—HOUSE OR SHOP HAMMER.

to the attractive appearance. It is furnished with a sectional jointed handle, so that a length of 36 or 45 inches is obtainable, and is provided with a side spring to hold card

Cablegram to

President Roosevelt,

Oyster Bay.

American Rifles, AMMUNITION and Men won victory to-day over Great Britain, Canada, France, Norway, Australia and Natal, and bring back Palma trophy.

(Signed) Lieut. Albert S. Jones,

Secretary of the National Rifle Assn. of America.

Copied from N. Y. Herald.

This SWEEPING VICTORY for America, and the extraordinary score of 1570 out of a possible 1800 were made with 30/40 regular factory Cartridges, manufactured by the

UNION METALLIC CARTRIDGE COMPANY

selected after exhaustive trials, by the entire American Team in preference to all others, for their wonderful uniformity and extreme accuracy.

SCORES ARE IMPROVED BY USING U. M. C. AMMUNITION.

SOUVENIR CARTRIDGES (Without Powder) ON APPLICATION.

THE UNION METALLIC CARTRIDGE CO.

313 BROADWAY, NEW YORK CITY.

Factory, Bridgeport, Conn. Depot, 86 First Street, San Francisco, Cal.

while setting first tack. As shown in Fig 2, fixed in the head of the handle and projecting through the eye of the hammer is a magnet, which can be used to hold a tack in position to be driven upward into the ceiling. The hammer head is removable, allowing the handle with its magnet to be used separately as a pole for hanging cards, posters and banners from ceilings, window sashes, etc. The small horse shoe magnet tack hammer shown in Fig 3 is referred to as a superior tool for house or shop use, and is intended to retail at a moderate price. The head has a bright finish, with a handle 12 inches long.

HARDWARE PATENTS.

The following list of Patents, Trade Marks and Designs of interest to the Hardware trade are furnished by Davis & Davis, Solicitor of American and Foreign Patents, Washington, D. C., and St. Paul Building, New York City.

PATENTS EXPIRED OCT. 5, 1903.

350,102. Combined Threshold & Weather Strip, H. J. Beams, Reynoldsville, Pa.

350,193. Handsaw, W. H. Fritts, Plano, Ill.

350,195. Sash Pulley, W. Goforth, Windsor, Mo.

350,208. Spring Hinge, D. Nickel, Morris, Ill.

350,239. Gas Heating Attachment for Reversible Sad Irons, H. C. Fox, Evansville, Ind.

350,308. Cork Puller, J. A. Hurley, Erie, Pa.

PATENTS EXPIRED OCT. 6, 1903.

740,393. Saw Set, H. Caldwell, Ocosta, Wash.

740,439. Flour Seive, Edith M. Jones, Manomet, Mass.

740,440. Soap Cake, R. A. Jones, Stamford, Ky.

740,529. Attachment for Oil Cans, W. L. Chrysler and J. Day, Woodlake, Neb.

740,775. Fish Hook, F. H. Pardon, Owensboro, Ky.

PATENTS EXPIRED OCT. 12, 1903.

350,511. Sash Holder, J. E. Toft, Exira, Iowa.

350,513. Micrometer Calipers, A. L. Washburn, Boston, Mass.

350,523. Broom Holder, A. M. Bodley, Newport, Ky.

350,538. Track for Barn Door Hangers, J. H. Lawrence, Sterling, Ill.

350,597. Lifting Jack, M. C. Meeker, Occidental, Cal.

350,613. Bench Plane, F. M. Bailey, New Britain, Conn.

350,636. Furniture Caster, D. C. Otis, New York, N. Y.

350,702. Cork Screw, W. Schollhorn, New Haven, Conn.

PATENTS ISSUED OCT. 13, 1903.

741,014. Snap Hook, R. F. Covert, Salida, Cal.

741,015. Ice Cream Dipper, F. J. Craven, Pittsburg, Pa.

741,083. Skate, J. Thomsen and A. Petersen, Chicago, Ill.

741,382. Folding Bracket for Telephones, etc., S. J. Seigfreid, Chicago, Ill.

741,409. Clothes Pounder, O. Oines, Volga, S. D.

741,414. Vehicle Jack, E. H. Ryn, Philadelphia, Pa.

741,454. Combined Coal Hod & Sieve, W. H. Byar, Reading, Pa.

HOME OF THE MOTHER-OF-PEARL.

According to a report compiled for the Commercial Museum at Manila, the true "mother-in-pearl," a large oyster which varies from 6 to 15 inches or more in diameter, and weighs from 2½ to 10 pounds, is not known to exist elsewhere than in the waters of Thursday Island, off the northeastern point of Australia, along the coasts of North Queensland, West Australia, Burma, New Guinea and the Philippines, and in the Arafura Sea. Smaller and less valuable shell oysters are found in some other parts of the world. It is thought that an important business may be developed from mother-of-pearl in the Philippines.

A ROOF THAT INSPIRES CONFIDENCE.

The Stowell Mfg. Co., 114-134 Culver Avenue, Jersey City, N. J., whose portable asphalt gravel roofing is made from the natural asphalt, saturated felt and coated with pure Trinidad Asphalt, being both fire proof and acid proof, they have control of a line difficult to equal. Get prices and samples.

REVIEW OF THE MARKETS.

WIRE NAILS. Not much complaint is heard regarding the volume of orders for Wire Nails. While the quantites ordered would indicate demands for immediate requirements, they have been fairly plentiful, the aggregate of which compares favorably. The market is well maintained under the circumstances. Quotations are as follows: f.o.b. Pittsburgh, 60 days, or 2 per cent. discount for cash in 10 days:

Jobbers, carload lots	$2.00
Retailers, carload lots	2.05
Retailers, less than carload lots	2.15

New York. The local market is a firm one and the business fully as good as was anticipated for the season. Stocks in dealers' hands are only ordinary, being averaged up to present requirements, which are fairly light. Quotations being as follows:

Single carloads	$2.20
Small lots from store	$2.25 to $2.30

CUT NAILS. A fair demand only is noticeable in the Cut Nail market, but prices are well maintained. Quotations remain as previously quoted:

In carload lots	$2.15 base
Less than carloads	2.20

F.o.b. Pittsburgh, plus freight in Tube Rate Book to point of destination. Terms: 60 days, less 2 per cent. off in 10 days.

New York. Nothing of momentous importance affects the local Cut Nail sales, which are but ordinary and for immediate wants. Quotations are as follows:

Carloads on dock	$2.29
Less than carload on dock	2.33
Small lots from store	2.40

BARB WIRE. The business done in Barb Wire is regarded as being satisfactory by the mills, which are kept fairly busy, but largely on specifications on contracts already booked. Quotations are as follows: f.o.b. Pittsburgh, 60 days, or 2 per cent. discount for cash in 10 days:

	Painted.	Galv.
Jobbers, carload lots	$2.30	$2.60
Retailers, carload lots	2.35	2.65
Retailers, less than carload lots	2.45	2.75

SMOOTH FENCE WIRE. The biggest part of the business done in Smooth Fence Wire is for current wants, orders for future requirements being fewer in number than those for immediate sales. The market is a steady one. Quotations are as follows: f.o.b. Pittsburgh, terms 60 days, or 2 per cent. discount for cash in 10 days:

Jobbers, carloads	$1.90

3 to 5 pounds	.40 cents.
Hoop Sets:	
4 to 10 pounds	.40 cents.

All Sledges 25 to 40 pounds, 3 cents per pound net above price of 5 pounds.

All Sledges 40 pounds and above, 6 cents per pound net above price of 5 pounds.

CORDAGE. The demand for Cordage holds up very well and in good volume, the market being a firm one, a characteristic it has had for some time. The following quotations represent the market:

Pure Manila, 7-16 inch and larger	12
⅜ inch	12½
¼ inch and 5-16	13
Pure Sisal, 7-16 inch and larger	9½
No. 2 Sisal, 7-16 inch and larger	8½
⅜ inch	9
¼ inch and 5-16 inch	9½
Lath Yarn, Medium and Coarse	8¾
Jute Rope, No. 1	6½
No. 2	6

LINSEED OIL. The following quotations on "City" Raw Oil are those announced by the Dean Linseed Oil Co.:

In lots of less than 5 barrels...40 cents per gallon.

In lots of 5 barrels or more....39 cents per gallon.

The "American" brand for respective quantities, 2 cents per gallon less.

The five barrel price applies only to deliveries of that quantity at one time.

Boiled Linseed Oil, 2 cents per gallon higher than Raw.

Calcutta Oil ..... 65 cents per gallon.

THE PHILADELPHIA TRADE.

The Fall season is now well under way, and although we have had no cold weather to make a demand for skates, etc., general trade has kept up in very satisfactory volume, and while there are some reports of lessening demand there is very little evidence of it so far. On the contrary, there is an entire absence of speculative buying. Prices on most lines are keeping steady and there is a good call for goods going directly into consumption. The local flood has made quite a demand for nails, and heavy building material to repair

Digitized by Google

damages, but outside of this there have been no unusual conditions. Collections might be somewhat improved and complaint is made that they are not up to the average, although exactly why this should be it is hard to say, and we trust it is only temporary. Biddle Hardware Co.

THE CLEVELAND TRADE.

Trade would be considered good only for the abnormal condition of business in the last few years. In most sections it compares favorably with 1902, and confidence seems to be improving. There is no panic among manufacturers, and not much reduction in price. The increased cost of labor more than overcomes the reduction in the price of material, so that cost is too near the selling price on most goods to permit reduction. Manufacturers are not being compelled to sell goods without regard to cost to raise money to pay their debts as they have been in the pasty. A "dry spell" in Wall Street does not effect the crops out West. Money is not scarce. The fear it might be has had some influence, but the bank balances will soon create an anxiety for loans. And this kind of competition is good for business. Firms in good standing have no trouble to get money for all legitimate purposes. Money is likely to be cheap in 1904, as its use in promoting speculative enterprises will be greatly reduced. The solution of the worst feature of the labor question which seems approaching, will more than compensate for the Wall Street panic, making the common law responsibility apply to unincorporated organizations will end boycotts.

The Lockwood-Taylor Hardware Co.

THE CINCINNATI TRADE.

Fall trade is active and orders continue good both by mail and through traveling salesmen. Collections good; no extensions asked from quarters as was looked for. The local labor agitation has been confined to trades outside of the Hardware and building, so that any direct result affecting the Hardware trade has not been felt. Traveling men report that stocks are sold out cleaner than they have been for a long time and dealers need the goods, but still will not order in any large quantities, which will necessitate ordering oftener. The prospects are highly encouraging for a good Fall trade. Evans Bros.' window display is the most attractive in the city, one window devoted to bench tools, one to cutlery and a third to sporting goods. Mr. Evans says he believes he secures a good deal of transient custom through the window display. "Ping-Pong" Poorman, in addition to his sporting goods and bicycle goods, has entered a line of phonographs, the display occupying one side of the store. Mr. Poorman said the line is paying nicely. The Mabley & Carew Co. is selling the American Family Scale weighing up to 25 lbs. for 75 cents, having their name plate on the stand of the scale. The Roll-Crawford-Brendamour Co. are exhibiting two beautiful silver loving cups, one with stag handles, presented by Theo. M. Foucar to the Cincinnati Gymnasium for Basket Ball Tournaments, November 1st to March, 1904, and the other all silver, presented by Dr. J. C. Kreiger to the Northside Base Ball Club as winners of championship in Fraternal Base Ball League. A new organization was formed here this week to fight strikes, boycotts and other principles claiming the Freedom of Mankind. The prospectus states that names of the officers are kept quiet fearing the promoters will be misunderstood by trade unionists. The International Co-Operative Federation is patterned after the Independent Labor League, of Elmira, N. Y.

THE SAN FRANCISCO TRADE.

Charles Madeira, western representative C. E. Jennings & Co., manufacturers mechanics' tools and Hardware specialties, 101 Reade Street, New York, is the only non-resident traveler now here visiting the trade. The writer met him this week in several stores writing orders and heard him speak in glowing terms, not only of business as he is finding it here in San Francisco, but in the north coast territory where he has been the past few weeks, mentioning particularly Spokane, Seattle, Tacoma and Portland and especially Los Angeles in South California, which he characterizes as a coast business center most booming of them all. Three times a year he visits the trade in his great district, which

NICHOLSON FILE COMPANY
GENERAL OFFICES: PROVIDENCE, R. I., U. S. A.

MANUFACTURERS OF
FILES AND RASPS
NICHOLSON, KEARNEY & FOOT, ARCADE, AMERICAN, GREAT WESTERN, McCLELLAN, EAGLE, J. B. SMITH, "X. F.", GOLD MEDAL.

extends from the Mississippi River west to the ocean. He is highly elated over the success he is having in introducing "The Acme of Perfection," otherwise Jennings' New A 7½ Hand Saw.

As a matter of business facility the jobbing trade is pleased to mention an advantage claimed by reason of news received this week from Dawson, that a consolidation of the San Francisco Commercial Company and the North American Trading and Transportation Company of Chicago and Seattle, whereby the entire trade of the Yukon is practically controlled. The combination own a fleet of forty or fifty river steamers, and plants and properties in the Klondike, valued at several million dollars and purpose maintaining trading posts and stores in all of the mining camps throughout Alaska and the British Yukon. Vice-President Isom, secretary Snowdon and Auditor Griffin of the North American Trading and Transportation Company are now at Dawson establishing there the headquarters of the new business consolidation.

The board of aldermen of the city and county of San Francisco have under consideration a petition headed by H. P. McPherson, manager Star Hardware Company, and L. H. Kohn, both prominent retail Hardware dealers, the petition carrying with it the approval of the Master Locksmith's Electricians' and General Repairers' Association, and the chief of police recommendation that the petition be granted. The prayer is for the enactment of an ordinance to regulate the business of locksmithing, the petitioners representing that irresponsible parties, with no fixed place of business, get possession of skeleton keys and facilities for making and selling the same to any and every one who may desire to use them, often for unlawful purposes.

The legal windfall mentioned in this correspondence two weeks ago as having blown $100,000 into the lap of Alfred C. Rulofson, manager of the Hardware department of Baker & Hamilton was $300,000 short of the fact. The legacy that has come to Mr. Rulofson by decision of the Supreme Court is $400,000. INDUSTRIAL PRESS ASSOCIATION.

✤

DIAMOND SAW & STAMPING WORKS, 357-361 Seventh Street, Buffalo, N. Y., are placing before the trade a very neat pamphlet regarding their Sterling Hack saw blades, which they claim do straight, true, quick work and last longer than other hack saw blades. Their No. 10 is a very attractive frame made of malleable iron, and they state, is as strong and durable as any frame made; blade adjusts to different angles. It is finished in black enamel and has a red hand polished handle. Their No. 50 has a light frame, strong in center. can easily be adjusted for blades of any size from 8 inch to 12 inch. The blade adjusts to 4 different angles, and has dead black hard finish handle, highly finished and is very serviceable. The above mentioned blades, together with several others of their manufacture are illustrated in the pamphlet, and all are supplied with list prices.

RETAIL DEALERS' HARDWARE AND IMPLEMENT ASSOCIATION OF TEXAS.

The sixth annual convention of the Retail Dealers Hardware and Implement Association of Texas was held in Dallas on the 6th, 7th and 8th inst. The report of Secretary-Treasurer James G. Blaine with reference to the finances of the association was as follows: Balance on hand October 6, 1902, $225.27. Received since for membership fees and dues, $369, making a total amount to October 7, 1903, of $594.27. Expenditures were $561.40, leaving a balance of $32.87.

Officers were elected for the ensuing year and resolutions were passed touching upon important matters that confront the members of the association. It was decided that the executive committee shall meet in Dallas on the second Tuesday in January, 1904, and discuss the work in hand and that their expenses be paid by the association. The constitution was changed to reduce the number of the executive council to three, who, with the president and secretary as ex-officio members, will bring up the number of the committee to five.

Capt. W. H. Richardson, of Austin, who has been president of the association since its organization, and James G. Blaine, of Taylor, who has been secretary for the same period, upon their own requests, retired from office. They were voted a resolution of thanks and the convention presented each a handsome cane properly inscribed.

The following officers were elected for the ensuing year:
President—S. L. Erwin, Honey Grove.
Secretary and treasurer—J. W. McManus, Waxahachie.
First vice-president—W. M. Gunnell, Marlin.
Executive Committee—W. A. Allen, Calvert; R. L. Penick, Stamford; T. T. Clark, Ennis.

In his annual address President Richardson reviewed the trade situation and the political situation with reference to the Hardware and implement business. He scored the railway rate matter, saying that on the one hand they have the combined capital of identical interests represented by the brainiest men and the best talent in their different lines, and these have to be met in the legislative halls and overcome by an organization such as the Association of Hardware and Implement Dealers.

The peddling law secured by efforts of the association, the president said, has been practically nullified by want of prosecution. The speaker pointed out the present bad business methods and the unprofitable nature of business in which they were engaged and counseled better organization, with a view to better business methods.

The association was addressed by C. F. Huhlein, of Louisville, Ky., and H. C. Staver, of Chicago, delegates to the convention from the National Association of Manufacturers.

On the evening of the 7th the association were guests of the Dallas Implement Machinery and Vehicle Association at a smoker given at the Windsor Hotel, over 300 persons being present.

STANLEY RULE & LEVEL CO.

NEW BRITAIN, CONN., U. S. A.

Improved Carpenters' Tools.

SOLD BY ALL HARDWARE DEALERS.

CATALOGUE OF L. C. SMITH GUNS.

The Hunter Arms Co., Fulton, N. Y., who are the manufacturers of the "L. C. Smith Guns" have recently published one of the most artistic and attractive catalogues of their career. It is an oblong pamphlet embracing 30 pages, the press work, paper and illustrations are produced in the most convincing manner of expression and in the highest grade of the printers art. We reproduce the very artistic cover, which will be found suggestive of the excellence of the contents

generally. The cuts are displayed in vignetted color that has seldom been equalled. each cut showing the gun exactly as it is, having been made from photographs taken of the actual work. The description given of each style of the arms manufactured by the company is clear and succinct, easily understood, and free from technicalities that require a translation of the description. The salesman is fully informed by the text, of the distinguishing differences existing in the several guns described; every possible question being anticipated and replied to; several pages are devoted to a lucid explanation of the mechanism of their new Automatic Ejector Gun, the Hammerless Gun, and the Smith Guns generally. This is a catalogue which is worthy the dealers' attention, and should be requested, if not already received.

COMPLETE LINE OF FIRE ARMS.

Judging by the line displayed by them in their advertisement, the Hopkins & Allen Arms Company, Norwich, Conn., manufactures as complete a line of fire arms as one could ask for. They have a special on double guns, and furnish the trade lithographed folders containing dealers' names to help sell the guns.

✤

"You did not seem to be bubbling over with your usual spirit at the dinner," remarked the claret glass.

"No," replied the champagne glass, "I was placed directly in front of a temperate gentleman and he turned me down."

L. & I. J. WHITE CO.

The L. & I. J. White Co., Buffalo, N. Y., have recently issued their new catalogue and price list, making a well printed pamphlet of 64 pages. In presenting this new edition of their catalogue they call attention to the fact that their edge tools and machine knives have been manufactured and extensively used for nearly three quarters of a century, and during this time their trade has steadily grown from a small beginning, until now when there are more of their goods sold than of any other manufacturer in the same line, and in the various markets of the world they are recognized as the standard of American excellence. The catalogue is attractively illustrated throughout with wood cuts showing the extensive line of goods which form their principal production, list prices accompanying the same in every instance. Their unrivalled reputation has been achieved by manufacturing only a high grade of goods fully warranted, and yet at prices quite moderate by comparison with similar goods with which they may be in competition. We present herewith an excellent illustration of their present plant which certainly conveys a graphic idea of the facilities at their command for the successful handling of their largely increasing domestic and foreign business.

THE RURAL TELEPHONE.

About as handsome a brochure as has lately come under our observation as an advertising production, is the 32 page pamphlet issued to exploit the Rural Telephone system established by the North Electric Co., Cleveland, Ohio. The pamphlet cover and envelope at once attract attention by the novel and unique appearance of dark paper, embossed title letters and photographic vignette showing telephone wire adorning a stretch of road cleverly photgraphed to show method of installation. The pamphlet is handsomely printed in brown ink on coated paper and the many artistically prepared half tones from original photographs give a charm to its perusal which concentrates the interest to be taken in the subject of rural telephones. All the necessary equipment is fully illustrated and described in a graphic manner that is more than usually instructive, and certainly convincing. The artistic execution of the exploiting commends it to the casual reader and the pamphlet itself is filled with necessary information regarding the engrossing subject and its requisitions, that makes it of interest to any one with an imperfect knowledge of the line of work to which its contents are devoted. Copies of this handsome work may be obtained on receipt by the company of 25 cents.

A NEW HARDWARE STORE IN STAMFORD, CONN.

Robert A. Reynolds, who, for over 30 years has been in the employ of the Yale & Towne Mfg. Co., intends opening a Hardware store in Stamford, Conn., on Main and Sumner Streets, dealing exclusively in Builders' Hardware and Woodworkers' tools. He was for a number of years the su- Towne factory, and the confinement to his duties incidental to the position impaired his health, and predisposed him for a change. He has arranged with the officers of the company, who have the kindest wishes for his success, to handle the Yale & Towne goods exclusively as far as the business may relate to locks and builders' Hardware, so he will be prepared to solicit business from architects and builders, submitting samples wherever required. His stock will be complete and he will be ready for business by November 2nd.

THE IOWA HARDWARE DEALERS' MUTUAL INSURANCE ASSOCIATION.

The following letter addressed to the Hardware Dealers of Iowa, gives an encouraging idea of what can be done in saving the expense of insurance in the old line companies, in which the expense of doing business compels the payment of extravagant premiums. Although only eight months old, it has already acquired a standing in the State by the amount of business successfully obtained, that would make it appeal to the dealers who are benefited by its operations, in a way that would naturally compel compliance, endorsed as it is by the barometer of the pocket.

Mason City, Iowa, October 1, 1903.

To the Hardware Dealers of Iowa:

The above named association authorized by the Iowa Retail Hardware Dealers' Association, at their last annual meeting, February, 1903, began active work in receiving applications on July 3d, securing the legal requirement of $100,000.00 of applications in about six weeks. On August 20th full authority was granted by the State to carry on the business of Fire Insurance.

We are anxious to keep up the good record of the first two months; at the same time avoiding the expensive plan of sending a solicitor to you to secure the business. This element of saving is very important in keeping down the expenses of the association, as a competent solicitor would demand from 25 per cent. to 30 per cent. of the premiums secured, which may just as well be saved to your own pockets.

The entire expense item of the Minnesota Hardware Mutual, which company eliminates the commission expense, was only 12 per cent. of the premiums last year. This is a fine showing and one which we hope to equal as soon as we have passed the first expenses of organization.

Our Executive Committee on September 5th, inspected the office, books and methods of the Minnesota Company and were highly pleased with the volume of the business and the simplicity of the methods of this similar institution. It was the verdict of the committee that if every dealer in Iowa could have seen this business as they saw it, that our own office would be swamped with business for the next two or three months.

The seventeen hundred Hardware Dealers of Iowa can certainly have an Insurance organization that will be equal, if not surpass, that of any other State, and all that it requires is that every dealer place with us a part of his insurance business, which can be done at a very handsome saving to the rates that you are now paying.

We write policies of Insurance for a term of one to five years on Hardware stocks, store buildings and dwellings owned and occupied by Hardware Dealers. The minimum amount accepted is $500 and the largest risk we carry is $2,000. Not more than $3,000 will be carried in one block.

We are the first mutual company in the State to be authorized to collect on the modern plan of the cash deposit system. The sum deposited is equal to the amount you are paying for your insurance in the old line companies. We place this sum to your credit on our books and at the end of the year charge up to your policy just what it has actually cost to do the business. The surplus will be returned to you in cash or credited up to your next year's insurance premium.

In other words we furnish Insurance at its bare cost. Send in your application now. Do not wait for the date of your expiration. The secretary will gladly furnish any information that you may desire.

Very truly yours,

A. R. Sale, Secretary. S. R. Miles, President.

TO SUPERSEDE EMERY

Craig Mine Crystal Corundum

CRAIG MINE CRYSTAL CORUNDUM is as uniform as the coins of the realm. It excels the irritatingly uncertain abrasives produced elsewhere, even as the coinage fresh from our modern mint excels the hand-made money of Alfred the Great. Nature made Craig Mine Crystal Corundum. It is all the same in physical qualities; a testimonial in favor of one pound testifies in favor of the whole output.

Craig Mine Crystal Corundum grains are numbered 12, 14, 16, 20, 24, 30, 36, 46, 54, 60, 70, 80, 90, 100, 120, 150, 180 and 200. Find the number that suits your work and continue ordering it.

HARDWARE DEALERS' RECORD.

Hardware dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Stores, Incorporations, Etc.

Allegheny, Pa.—The Taylor Hardware Company has been incorporated. Capital stock $25,000.

Brashear, Mo.—C. H. Unger will open a Hardware store.

Buck Creek, Ind.—The Buck Creek Hardware Co. has been organized. Capital stock $2,000. The following officers have been elected: F. M. White, president; J. C. Eckhart, vice-president; W. H. Vaughn, secretary-treasurer. The company deals in general Hardware and implements.

Clebourne, Tex.—The Cumby Hardware and Furniture Company has been incorporated; capital stock $5,000. Incorporators: M. C. Spivy, B. E. and R. M. Spivy.

Columbia, Tenn.—The Mitchell-Ashley Hardware Company is the name of a new firm that will begin business here the first of next year. The firm will be composed of John T. and Joe L. Mitchell, who are now traveling for the Novell Hardware Company, of St. Louis, and Sim Ashley, a traveling salesman for the Simmons Hardware Company, of St. Louis. They have rented three business houses on the northwest corner of the Public Square and these will be improved and connection made between them.

Emporia, Va.—The Greenesville Hardware Company has been incorporated; J. B. Bailey, president; capital, $5,000 to $10,000.

Holyoke, Mass.—The Frank Octo Company has been incorporated. Capital stock $10,000. President and treasurer, Napoleon Desrosiers.

Knoxville, Tenn.—A new firm in the Hardware business in Knoxville is the Cruze-Sterling Company, which opened its doors at 316 Gay Street the first of last month. The company is occupying one of the handsomest of the new business houses on that block, and has filled it with a well selected stock of Hardware. The company will not at present carry a complete general stock, but will confine themselves to a general line of Builders' Hardware, high grade paints, white lead, oils, sash, doors and blinds and all kinds of glass. This makes a complete Builders' Hardware line and this will be their specialty. The members are W. L. Lyons, C. C. Cruze, O. P. Sterling and L. A. Hayes.

Los Angeles, Cal.—M. Gordon and Wm. E. Hubbard will open a Hardware store under the firm name of Gordon & Hubbard. Each of the gentlemen have been engaged in business in the Hardware line with the Union Hardware and Metal Co., and the Howe Bros. Hardware Co. All branches of the business will be represented in their offices.

Luzerne, Pa.—T. G. Osborn will open a new Hardware store on Bennett Street.

Mapleton, Iowa.—W. E. Allen will open a new Hardware store.

Morganfield, Ky.—A new Hardware and implement store will be opened under the firm name of Walker & Scott, composed of J. B. Walker, of Waverly, and M. E. Scott, of Morganfield. They will carry a full line of Hardware, cutlery, guns, etc., and all kinds of farm implements.

Mountainsboro, Ala.—S. H. Leeth has opened up a large Hardware store.

Ocala, Fla.—The Marion Hardware Company has recently been organized. The members of the firm are: R. S. Hall, T. C. Hall, T. E. Bridges, T. W. Smith, S. H. Blitch, L. J. Rawls and L. J. Knight.

Richmond, Va.—Norton Hardware Company, Wise County, has been incorporated; J. R. McNutt, president; capital stock, $50,000.

Savannah, Ga.—The Anderson Hardware Company has been incorporated; capital stock $25,000. J. J. Fretwell is president; J. W. Brock, vice-president, and L. G. Hallman, treasurer.

Zearing, Iowa.—John and Edward Woehler will open a Hardware store and also run a tin shop in connection with it.

Changes.

Austin, Tex.—The Anderson-Wilcox Hardware Company, of Sour Lake, has increased its capital stock from $10,000 to $20,000.

Blairsburg, Iowa.—An invoice of the Schroeder Hardware stock has been taken and it will pass into the control of C. M. Powers.

Birmington, Ala.—On October 1 the Johnston Hardware Company closed down its business. One member of the firm will open a Hardware business in Chattanooga and the other will establish a clothing store in this city.

Calhoun, Ga.—R. Y. Gray has retired from the Bishop-Gray Co., and the business will in future be conducted under the firm name of the Bishop Hardware Co. Mr. Gray expects to connect himself with a Chattanooga Hardware concern.

Canandaigua, N. Y.—The Frazer Hardware store at Victor has been purchased by W. H. Townsend, of this place, and A. B. Munson, of Cheshire. Mr. Munson will immediately take charge of the business, but Mr. Townsend will remain in town until Jan. 1.

Clarksville, Tenn.—Ed. L. Buckley, formerly of New Providence, has purchased the business of the Guthrie Hardware Company. For the present S. B. Gray will conduct his Guthrie business for Mr. Buckley.

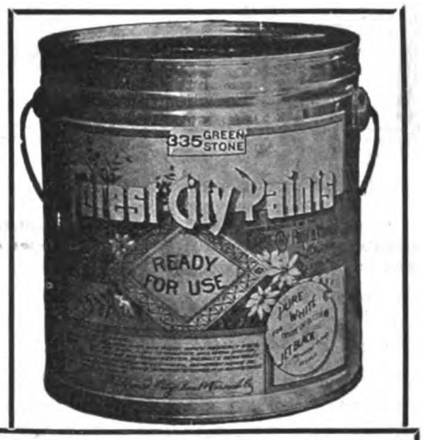
Dalton, Mo.—W. T. Cropper, of Salisbury, has purchased the Hardware and implement stock of Iglehart & Smith.

Dexter, Can.—B. H. Ward has added a large and complete line of Hardware to his lumber business. It consists of builders' ware, stoves, pumps, etc.

Durham, Iowa.—Henry C. Byler has formed a partnership with his son, Frank L. Byler, in the Hardware business, and the firm name is now Byler & Byler.

Fisher, Ill.—The implement firm of Schenk & Hinton have dissolved partnership, A. J. Schenk buying the whole stock.

Galesburg, Ill.—J. C. Toler has sold his Hardware business to the Galesburg Hardware and Iron Company. The partners of the new firm are George F. Kohnle and Walter F. O'Donnell, both of whom are connected with the Van Camp Wholesale Hardware and Iron Company, of Indianapolis. The new firm will take charge at once. Mr. Kohnle worked for Van Camp Co. eleven years and Mr. O'Donnell for eight years. Mr. Kohnle as the assistant buyer in the heavy Hardware department and Mr. O'Donnell has been connected with the Toler retires from the business on account of ill health and expects to do some sort of out-door work.



Galion, Ohio.—Cassel & McGuire have moved their Hardware store from Crestline.

Hutchinson, Kan.—Next January, a new corporation will commence doing business in this city, which will be one of the large and strong concerns in its line west of the Missouri River. It will be styled "The Frank Colladay Wholesale Hardware Company." The new company will absorb the present business of Frand Colladay, and in addition, will wholesale a general line of shelf and heavy Hardware. Frank Colladay, who will be president and general manager of the company, has been successfully engaged in the retail Hardware and implement business here for over eighteen years, and has also been doing a jobbing business in Hardware specialties for the past year. The other stockholders of the concern are all home men, being among our prominent and successful business men, and are of such financial standing as to make it a very strong corporation. The board of directors will be composed of the following gentlemen: Judge F. L. Martin, L. A. Bunker, Dr. S. M. Colladay, Frank Colladay and Charles S. Colladay. The officers are: Frank Colladay, president and general manager; L. A. Bunker, vice-president; Charles S. Colladay, secretary and treasurer.

Kissimmee, Fla.—J. R. Graves, Sr., and Son have purchased the Makinson Hardware stock and the firm will be known as Graves & Graves.

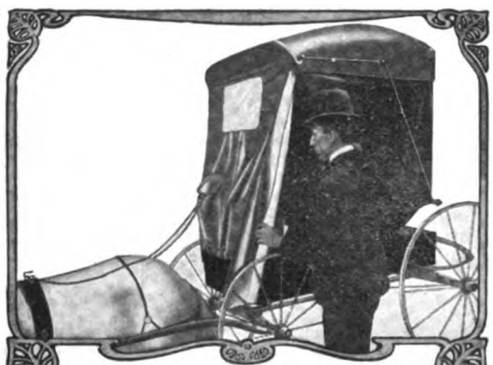
THERE'S MONEY IN RAIN



and rough weather if you carry

Blizzard Storm Fronts

The front that closes up a buggy in half a minute. Cleverest, easiest adjusted, quickest selling. Millions read our ads in the popular weeklies, magazines, agricultural papers, etc. **Only** storm front advertised. People write us all the time asking where they can get these fronts. We'll send inquiries from your locality to you if you handle "Blizzards."

THREE FREE

We will express you prepaid, as a trial order, three Blizzard Storm Fronts on the condition that if you sell them within thirty days you pay us, if not, you return them **at our expense.** Liberal, but risky? No risk at all. **We know** you will sell them and write us for more. **Order today.**

Comfortable Driving

even in the worst weather is insured by the

Blizzard Storm Front

(Patented in United States and Canada.)

Fits Any Buggy

Adjusted in a moment without getting out or removing gloves. Smooth working sides make exit and access easy. Large windows. Generous line pocket—drive a pair easily. Strongest, most convenient and closest fitting storm front made. Compactly folded out of the way. Guaranteed.

Ask your dealer and be sure that trade-mark "Blizzard" is stamped on inside under window.

Sold by Vehicle, Harness and Hardware dealers: Light rubber, $3.00; heavy, $3.50. If yours hasn't it, write us. *Illustrated booklet free.*

HARDWARE MANUFACTURERS' RECORD.

Hardware manufacturers over the country, are requested to contribute to this page. News of new factories or companies, changes, improvements, etc., will be gladly received, and promptly published.

New Incorporations, etc.

Augusta, Me.—The Lowrie Safe and Lock Company has been organized for the purpose of manufacturing and selling locks, fastenings, safes, etc., with $500,000 capital stock. The officers are: President, J. Berry, of Augusta; treasurer, A. M. French, of Winthrop.

Baltimore, Md.—The National Lantern and Lamp Company has been incorporated to manufacture all kinds of lamps and lanterns; capital $100,000. Incorporators: Jackson Holland, J. D. Brown, C. R. Wilcox, George T. Brown and C. S. Field, all of Baltimore.

Bradford, Pa.—The Crandall Cutlery Company has been incorporated; capital, $35,000.

Chicago, Ill.—Gillette Sales Company has been incorporated; capital, $150,000; manufacturing and selling Hardware specialties; incorporators: George W. Burgoyne, Neil Satterlee, Luther M. Dearborn.

Cohoes, N. Y.—The Reynolds-Chalou Foundry Company has been incorporated to manufacture castings, stoves and heaters. The directors are: John Reynolds, of Troy; Michael H. Fallon and James B. Eagan, of Watervliet, and William Quillinan, of Cohoes. The capital stock is $20,000.

Detroit, Mich.—The Siphon Stove Co. has been incorporated. Capital stock, $50,000. Samuel E. Whitney is the principal stockholder.

Elgin, Ill.—Western Casket Hardware Company; capital, $25,000; manufacturing undertakers' supplies; incorporators: A. M. C. Todson, M. C. Parsons, W. E. Todson.

Emporia, Va.—Greensville Hardware Company has been incorporated. Capital, $5,000 to $10,000. President, J. B. Bailey.

Louisville, Ky.—The Turner-Day, Woolworth Handle Company has been incorporated. Capital stock $667,800, all of which is paid in. The incorporators are: John Stiles, Henry Glover, Charles D. Gates, C. F. Turner, B. W. Marr, all of Louisville. The new company is a reincorporation of the old Turner, Day & Woolworth Handle Company, which has been doing business in Louisville for many years, and is the second largest manufacturer of wooden handles in the United States.

Minneapolis, Minn.—The Fawkes Manufacturing Company has been incorporated with $25,000 capital to make Hardware, wooden ware and patented articles. The incorporators are: Herbert R. Jones, Leslie H. Fawkes, Wilbert C. Fawkes and Frank E. Sprague.

Newark, N. J.—The E. C. Faitoute Hardware Company has been incorporated, principal office, 97 Market Street. The incorporators are: Edward C. Faitoute, Robert Geswein, of New York, and William M. Brown, William G. Beach and Burton L. Hare, of this city. The business will include the sale and manufacture of heavy as well as shelf Hardware.

New Haven, Conn.—The Franklin Mfg. Co. has been incorporated. Capital $25,000. F. B. Shuster is president and treasurer; George D. Phillips, of Bridgeport, vice-president; and Frederick L. Kutcher, of this city, secretary and assistant treasurer.

Owensboro, Ky.—A corporation known as the Kentucky Anchor Fence Company has been incorporated. The new concern has a capital stock of $100,000 and several Owensboro business men are among the heaviest stockholders. The company will manufacture wire fencing and the plant will be in operation in a short time.

Perry, Ill.—Cook Heater Company has been incorporated. Capital $40,000; incorporators: M. A. Cook, E. H. Alford and E. R. Grimson.

Pittsburgh, Pa.—The American Spiral Spring and Mfg. Co. has been incorporated. Capital stock $30,000.

Rochester, N. Y.—The Phelps Plow Works which has been conducted by M. W. King has been formed into a stock company with a capital of $50,000 and has been incorporated, and will in the future be known as the King Chilled Plow Company.

Springfield, Ohio.—The Grove Manufacturing Company has been incorporated with a capital stock of $5,000. The incorporators are: Elmer E. Grove, W. J. Stuart, J. S. Powers and Dr. D. King Gotwald. The company will manufacture Elmer Grove's patent drop light.

St. Louis, Mo.—The Treece Implement Company has been incorporated; capital stock, $10,000, all paid. Incorporators: Cicero Barber, of Tamara, Ill.; W. M. Waters, W. H. Treece and Mrs. Allie Waters.

St. Louis, Mo.—The Reliance Pneumatic Tool Company has been incorporated; capital stock, $50,000, all paid. Incorporators: J. S. Hyman, of Topeka, Kan.; J. B. Buss, W. D. Pittman and B. J. Buss.

Changes.

Bloomington, Ill.—An important combination of implement and vehicle interests has been effected. By the terms of the deal the following concerns are merged: Palmer-Darnall Company, Bloomington, Ill.; Parsons Vehicle Co., Columbus, O.; Columbus Vehicle Co., Columbus, O.; Keystone Carriage Co., Cincinnati, O. The entire manufacturing business of the three vehicle companies named will be moved to Bloomington, where it will be conducted under the name of the Palmer-Darnall Co., which company will also continue their implement jobbing trade on an enlarged scale. To meet the requirements of the consolidation the capital stock of the Palmer-Darnall Co. has been increased to $100,000 and later it will be increased to $150,000.

Chicago, Ill.—The American Radiator Company has begun the construction of a handsome building on Michigan Boulevard, between Peck and Elderedge Courts. It will occupy a frontage of 52 feet at 284 and 285, extending back 180 feet. Plans for the building have been completed by Architects Holabird & Roche. The front will be of an attractive design and will be carried out in light-colored pressed brick. The building will cost $75,000, and will be completed within three months.

Coffeyville, Kas.—J. E. McCulloch, representing the Marion Fruit Jar and Bottle Company, of Marion, Ind., closed a contract with a glass factory to make fruit jars will locate here. The factory will employ 150 men and make 35 per cent. of the Mason fruit jars, and with one other company has the monopoly of the business.

Columbia, Pa.—A meeting of the board of directors of the Keeley Stove Company was held yesterday, when Daniel H. Detwiller was elected president to fill the vacancy caused by the death of Henry F. Bruner.

Columbus, Ohio.—The Pioneer Stove Company have completed a new addition to their plant which will allow the company to almost double its capacity.

Davenport, Iowa.—A change has been made in the ownership of stock in the Rock Island Stove Company. A. M. Blakesley has disposed of his interests, after having been connected with the business for many years. His associates in the business, Phil Mitchell and Frank Mixter, have taken over his share and will continue the business.

Evansville, Ind.—The Sanitary Laundry Machine Company has decided to locate a plant at Tell City, Ind., to manufacture washing machines. The company is capitalized at $30,000, and most of the stock is held by Cincinnati people.

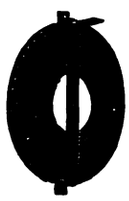
MINCE - PIE TIME COMING

MANY GEMS SELL THEN. ARE YOU READY?



You should put in a full stock of Sargent's Gem Food Choppers because the housekeepers will want them as soon as there is a demand for mince pies. Every season has its calls for the Gem, but within the next few months they will sell fast.

We Will Help You Sell the Gem

By advertising extensively in the publications read by women. By furnishing attractive slips for you to distribute among the housekeepers of your neighborhood so that they will know you sell the Gem. By supplying you with carefully prepared advertisements, electrotyped with your name and address, and ready for use in your local papers. These advertisements will constantly remind women that they need the Gem and that you sell it. By including with the choppers attractive show cards to hang about the store—a further reminder that will be seen by all who visit your store.

BICYCLE AND SPORTING GOODS RECORD.

Bicycle manufacturers and dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Stores, Incorporations, Etc.

Allston, Mass.—A new repair shop has been opened by H. E. Goodrich.

Bay City, Mich.—A new repair shop has been opened under the firm name of West Bay City Bicycle Co., with George Graves as manager.

Chicago, Ill.—B-Ok Tire Company has been incorporated: capital $10,000; manufacturing vehicles and tires; incorporators: Walter H. Chamberlain, George L. Wilkinson and Harry S. Gaither.

Davenport, Ia.—Wm. H. Beenk has opened a new repair shop.

Groveland, Mass.—Harry Savary has opened a new store.

New York, N. Y.—The Ernest J. Willis Company has been incorporated with $75,000 capital. The incorporated company takes over the large jobbing house at 8 Park Place that has been devoted to the motor cycle and motor vehicle business.

Pottsville, Pa.—The Pennsylvania Powder, Dynamite and Fuse Company has been incorporated with a capital stock of $20,000.

Philadelphia, Pa.—The Standard Powder Company has been incorporated. Capital stock $100,000.

Red Bank, N. J.—A new bicycle store has been opened at 39 W. Front Street by Fred Van Dorn. He sells new and second-hand wheels and does a general repair business.

South Bend, Ind.—The W. L. Cassaday Mfg. Co. has been incorporated. Capital stock $9,000. They will manufacture engines, flue-cleaners and bicycles. Incorporators: Wm. L. Cassaday, Oliver Cassaday and Geo. A. Cleveland.

Changes.

Akron, Ohio.—The B. F. Goodrich Company have increased their capital stock from $3,000.000 to $5,000,000.

Atlanta, Ga.—F. G. Byrd & Co., Hardware and cycle jobbers, have been succeeded by the Anderson Hardware Co.

Bradford, Pa.—The Holley Motor Co. having discontinued the manufacture of motor bicycles, has disposed of its stock to Phillips & Hamilton, of this city.

Columbus, Ohio.—The Young Arms Company, whose plant is located at Fourth and Naghten Streets, is to remove to Springfield next year. It is stated that a new factory is to be erected at a cost of $25,000, the construction of which will begin next spring. The Young Arms Company manufactures repeating firearms and employs about 100 persons. Charles Young is at the head of the enterprise.

Hartford, Conn.—Orders were issued recently by Colonel Albert A. Pope to all factories and branch houses of the American Cycle Manufacturing Company, advising them that the Pope Manufacturing Company had taken possession of all property, and instructing that business be hereafter conducted under that corporate title. The factories in Hartford, Westfield, Hagerstown and Chicago, and the branch houses in New York, Philadelphia, Washington, San Francisco, Boston and Providence had been prepared for the announcement for a number of weeks and immediately the old books and the old stationery gave way to the new, and the signature "Pope Manufacturing Company" appeared on all documents.

Jamestown, N. Y.—F. E. Taft has moved his stock of sporting goods to F. S. Jones' news rooms. In the future he will handle sporting goods in Mr. Jones' store, but will not do repairing.

New York, N. Y.—The Auto Supply Co. has opened a retail branch at 50th Street and Broadway, where a full line of automobile supplies will be carried in stock.

Niagara Falls, N. Y.—Frank J. Stratton, bicycle dealer, wishes to have his patrons and public know that he has decided to carry a full line of new and second-hand stoves this winter. Mr. Stratton will also ocntinue his bicycle business on a small scale this winter, corner Third and Niagara Streets. Next spring he will open a fine bicycle store and repair shop.

Northampton, Mass.—Geo. W. Williams has sold out his bicycle business.

Oregon City, Ore.—Huntley Bros. have discontinued the sale of bicycles.

Portland, Ore.—Fred. T. Merrill has lost the agency for the Rambler territory on the coast. Hereafter all of the Pope lines, including the Rambler, will be handled by the San Francisco branch.

Racine, Wis.—The Wisconsin Wheel Works, having merged into the Mitchell-Pierce Motor Co., Racine, Wis., have discontinued the manufacture of bicycles, and henceforth will be devoted to the production of motor bicycles and motor cars; its bicycle effects were sold to the Great Western Mfg. Co., of La Porte, Ind.

Schenectady, N. Y.—P. F. Ryan has sold his bicycle business.

Toledo, Ohio.—A big merger of local automobile and bicycle interests is being negotiated and the deal will be commun-negotiated and the deal will be consummated not later than the first of the year, if not within a few weeks, as now planned. Interested stockholders now state that the merger is under consideration and will undoubtedly be accomplished. The negotiations contemplate the merger of the Kirk Manufacturing Co., Snell Cycle Fittings Company and Toledo Manufacturing Company. Practically the same financial interests are back of all three enterprises and the three factories are located in the same vicinity—Fernwood Avenue and Lake Shore crossing. The same retail men handle the product of all three factories and for these and other reasons a merger is regarded as practically necessary. The Kirk Manufacturing Company makes automobiles and is capitalized at $50,000, and E. E. and E. A. Kirk fill the offices of the president-general manager and vice-president, respectively. The Snell Cycle Fittings Company makes bicycles and is capitalized at $150,000. E. P. Breckenridge is its president; E. E. Kirk, vice-president; J. R. B. Ranson, treasurer, and A. W. Colton, secretary. The Toledo Manuafcturing Company makes and assembles bicycle parts. The merger would unite the three companies under the corporate title of Toledo Consolidated Manufacturing Company. The capital stock will be increased and extensions made to the present factory buildings. The scope of the automobile trade would be enlarged.

TRADE NOTES.

Knobnoster, Mo.—The Parsons Hardware store has changed hands. J. H. Rothwell and C. D. Hayes are the purchasers.

Lee, Mass.—A. C. Sparks has sold his Hardware business to Michael Hines, of Lenoxdale.

SEWING MACHINE NEEDLES
are now carried by the majority of Hardware dealers. We carry a full and extensive stock of them and also all other kinds of Needles, and can make prices that will interest the trade.

Our Latest Business Bringer

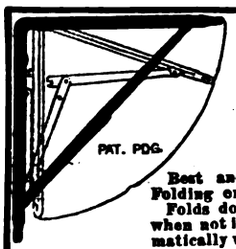
THE "GRAND RAPIDS"

THIS new Refrigerator—"The Grand Rapids"—is the companion piece to the famous "Leonard Cleanable"—*at a lower price.* The agency for both goes together.

Made of Ash instead of Quarter Sawed Oak, but with all the features of the higher priced machine, making it our "cheap" line, but even then a better *practical* refrigerator than the *best* of other makes.

Don't buy refrigerators until you have carefully investigated the advantages of handling this *couple*, the easiest selling and best known refrigerators made.

The "Grand Rapids" is made of ash, golden finish, double box throughout, insulated with charcoal sheathing, lined with zinc or white enamel, raised carvings, real bronze trimmings, removable flues, solid iron shelves, air-tight locks—*all* of them talking points. The name alone will sell it.



The "Leonard Cleanable"—known everywhere—quarter sawed oak panels, lined with real porcelain on sheet steel.

This makes the best selling combination it is possible to get.

Send for catalogue. Samples for comparison will be shipped on request.

PRICES CURRENT.

The prices noted in this Prices Current are intended for the Hardware trade only, and for such quantities as are usually purchased by retail dealers. They are carefully revised and represent quotations at which purchases can be made. Very small quantities, and broken packages, frequently make higher prices necessary.

Subscribers are requested to notify us of any discrepancies, as we desire to make this department of our paper worthy of their constant attention.

The list prices, from which discounts are given, will always be furnished the dealer upon request, by the manufacturer quoted.

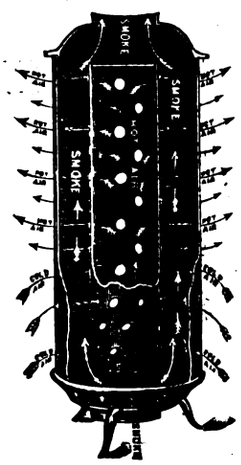
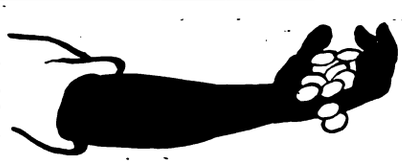
The Part that Does the Business.

Sell The Radiator That Radiates

Take a common sense view of heating. If you wish to heat a poker you hold it OVER the fire, not at the SIDE.



We hold 96 to 120 pokers over the fire, each having a hollow air space in center, through which a current of air rapidly passes, sending the heat to all parts of the room, getting results which no DRUM or SIDE HEATER can give. Advertised in 82 family papers and magazines, bringing 18,000 inquiries about the Rochester Radiator. These from YOUR town are referred to YOU while you carry our goods. Thus we sell them to you and then sell them FOR you. A postal will bring you full description and proofs from men in the trade who have sold thousands of them. Made in 12 styles, and sell from $2.00 up.

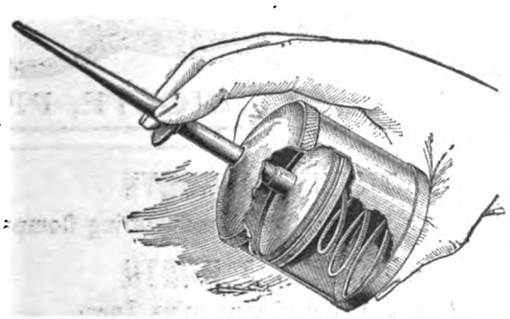


We will remember you with a Souvenir later; watch out for it.

ADDRESS

EASY ROCHESTER RADIATOR CO.,

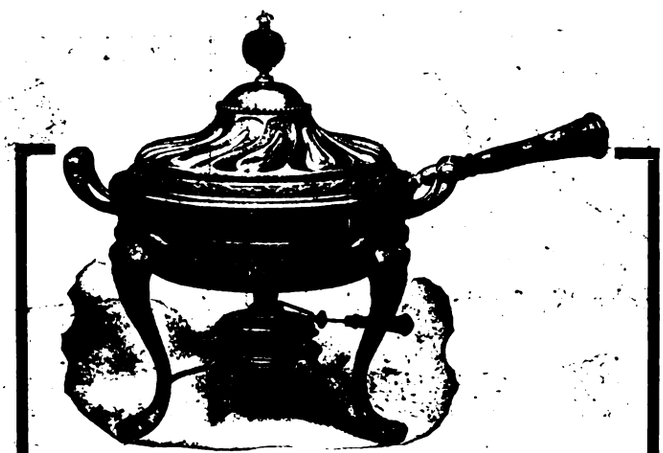
No. 150 Furnace Street, ROCHESTER, N. Y.



YOUR MONEY BACK

. . . IF . . .

The Rochester Automatic Oiler



Is not exactly as represented. We guarantee that it fills itself, by depressing spout. Removal of spout unnecessary when filling it. Waste of oil through overfilling impossible. Made of cold-rolled steel and is copperized to prevent rust.

Comes with spring or solid bottom. Spring bottom cannot break through use, as it is forced on—not soldered, or brazed. A trial order will convince. Send for catalogue. Mention Hardware.

Rochester Automatic Oiler & Supply Co.

Rochester, N. Y., U. S. A.

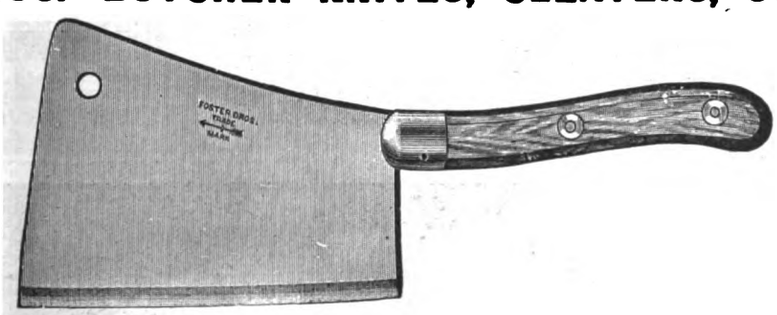
CHATILLON SPRING SCALES.

OUR attention having been called to the fact that inferior makes of Spring Scales are being sold to butchers as "Chattillon" Scales, we deem it due to the trade and to ourselves, in order to protect the merits of our Spring Scales, so well and favorably known for more than sixty years, to inform you that every Spring Scale manufactured by us

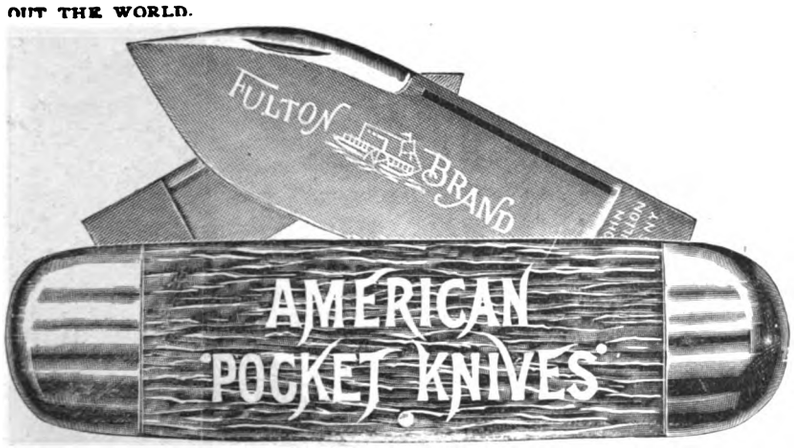


has our name as makers plainly on the dial, thus:

John Chatillon & Sons. Makers. New York. U.S.A.

and any scale without this name on the dial is NOT A GENUINE CHATILLON SCALE.

FOSTER BROS.' BUTCHER KNIVES, CLEAVERS, STEELS, ETC.



These Tools are recognized in the Markets, Packing Houses and Abattoirs throughout the United States as the standard of excellence, quality being the first consideration. We carry in stock every style and size of Knives, Cleavers and Steels used in cutting meat; also Knives for kitchen use in Hotels, Restaurants and for domestic purposes.

FRIEDERICH DICK'S MAGNET DIAMOND STEELS.

By careful workmanship and the use of a special steel in their manufacture THEY HAVE BECOME FAMOUS THROUGHOUT THE WORLD.

Finest Quality American Pocket Cutlery in large variety. Knives that are good sellers and will give satisfaction to the user.

ESTABLISHED 1835

JOHN CHATILLON & SONS, Now York City.

WHY IS THE

O. K. THE BEST ROTARY WASHING MACHINE?

—BECAUSE—

1.—It is the only Rotary washer that has **Revolving Steel Ball Gearing,** reducing **the friction** and thus making machine so **light running** and almost **noiseless.**
2.—The tub is made of **Louisiana Red Cypress Lumber, cherry finish;** the legs are **solid with tub** (not removable, breakable legs fastened with screws).
3.—The wheel turns right or left, pin wheel or dasher reverses automatically, turning the clothes back and forth through the hot sap-suds, and cleaning them without **rubbing** them to pieces.
4.—This washer is made by **experienced mechanics,** and will out-last any other washer on the market.
5.—The tub has a wringer box fastened with steel brackets.
6.—The lid on the tub closes tight, **no escape of steam.**

Better Buy A Blackstone

Rotary Washer
Formerly Vandergrift Rotary

The Blackstone Rotary Washer

IS the product of twenty-seven years' experience in the manufacture of washing machines. We guarantee it to be the most perfect machine of its kind on the market. The praises of those who have used The Blackstone Rotary constitute

A MEDLEY of MERIT

Examine every part of The Blackstone. It's made to last, being built of the very best material. It works both ways, forwards and backwards, and is supplied with our new patent device for fastening legs on with bolts instead of with screws and brackets as heretofore. It DOES the washing RIGHT in less time than other washers. Permits no foul steam to escape from soiled clothes, as it closes down lightly. **Send for Catalogue and Prices.** Mention Hardware.

The **Blackstone Mfg. Co.,** Jamestown, N. Y., U. S. A.

From Margam Forge, Glamorganshire, South Wales, to Martin's Ferry, Belmont Co., Ohio.

MF

Note the Coincidence:

The most favored brand of roofing tin, the MF which originated at Margam Forge in South Wales about sixty years ago, is now being produced by the American Tin Plate Co. in its works at Martin's Ferry, Ohio.

At the Martin's Ferry Works the MF old style process has been combined with the "New Method" of finishing Terne Plates. The result of this happy combination has been the U. S. Eagle N. M.

Ask W. C. Cronemeyer, Agent, 1211 Carnegie Building, Pittsburg, Pa., for our new booklet which teems with useful information.

U. S. TRADE MARK N M

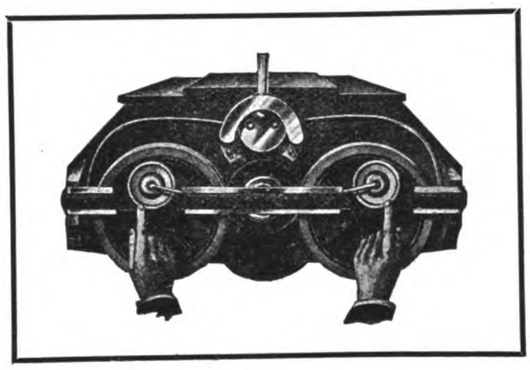
WHEN buying a Duplicator you should look well into the Schapirograph. It's up-to-date. We guarantee it to print from one pen or typewritten original 100 to 150 copies, in all colors, without the use of printing ink or stencil.



What goes with it: One best ribbon for duplicating typewriting; two bottles of ink; a special rubber roller. Price $6 00, net.

You need one for your circulars, invoices, price-lists—Don't you? Ten days' free trial. No deposit required. Send for circular.

THE SCHAPIROGRAPH CO.

265 Broadway, New York.

The **"CYCO" BEARINGS** in the **BISSELL SWEEPER** not only insure light running and noiselessness, but also the constant rotation of the brush on heavy carpets, something not possible in any other construction.

Poised as the **"CYCO"** wheels are on the hubs of the iron wheels, under pressure of the handle the iron wheels are forced into closer contact with the brush pulley, thereby giving a brush propelling power not contained in any other sweeper on the market.

So perfect is this feature of the **"CYCO"** mechanism, that even when the rubber tires on the wheels are worn thin, and which would destroy the friction in any other sweeper, the brush of the **"CYCO" BEARING** machine will still continue to revolve.

Tested upon a heavy carpet, **BISSELL'S "CYCO" BEARING SWEEPER** runs 75% easier than any other make, and is the only sweeper sold under the sound policy of fixed retail prices, that insure a good profit to the dealer.

If you are in doubt as to why 85% of the demand is for the **BISSELL**, just consider its acknowledged mechanical superiority, and the extensive manner in which it is advertised. **BISSELL SWEEPERS** are advertised in high class magazines having a combined circulation of over 10,000,000 with over 50,000,000 readers.

Write for our special Christmas offer.

A SHORT TALK ON STORE LIGHTING

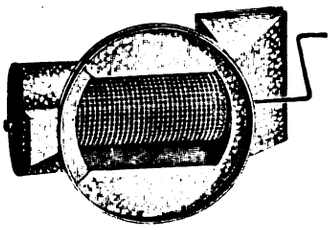
HOW THE WONDERFUL Doran Light Will Increase PROFITS AT Your Store

Good store light is a necessity, not a luxury. The well-lighted store is the cheerful store, and other things being equal, the cheerful store is the well-patronized store.

Nobody knows these things better than the gas and electric light companies. Do you pay your light bills cheerfully? Do they always seem reasonable? If they do, you are lucky. But if they don't, why not follow the lead of enterprising merchants all over the country and install a **"DORAN LIGHT"** system? **"DORAN LIGHTS"** give a stronger, steadier, whiter light than the electric arc and cost only one tenth as much to maintain. Their safety is beyond question.

Gasoline is supplied under air pressure to each lamp through a seamless wire tubing. The tank can be put anywhere out of the way. Insurance companies permit them with no extra charge. "Doran Lights" save money and increase custom and give satisfaction in every way; not to mention that every dollar invested in the "Doran Light" doubles itself many times in a year.

There is nothing you need so badly as a well-lighted store. Look around you, and you will find that the prosperous merchant is the one who has plenty of light, no matter what the cost. Have you ever noticed that you unconsciously patronize the well-lighted place? People are like moths—you will find them thickest where the light is greatest. Write for our special trial offer, and full information about our lighting system.



We have a liberal proposition to agents.

HARDWARE

The American Mfg. Company, manufacturers of Manila, Sisal and Jute cordage, 63-65 Wall Street, New York, report that their different mills are working to their fullest capacity. Transmission rope is one of their specialties and the orders are so many in number and so large in quantity that their present facilities for producing American transmission rope are conceded to be entirely unequal to the demand. The company have consequently placed orders for sufficient additional machinery, to double their present output.

The H. F. Brammer Mfg. Company, Davenport, Iowa, have just finished building an addition, 80x200 feet, in which they are installing three boilers, two of them being already in place. The company have also purchased a 200 H. P. Bates-Corliss engine, which has just arrived and is being put in position. Machinery from the old buildings will be removed to the new quarters in about ten days. The old plant will be utilized for finishing washing machines, and with the operation of the improvements will practically double capacity.

A new factory has just been built at Bristol, Conn., by W. L. Barrett. The main building is 96x32 feet with an extension of 15x20. Mr. Barrett will have the new factory in running order by January 1st. He will then be in a position to turn out 3500 Glass Cutters per day. It is claimed that this is the largest factory in the country as well as the best equipped for the manufacture of this line of goods.

At a meeting of the directors of the American Tap & Die Company, Greenfield, Mass., held on the 21st ult., Edward Wilbur tendered his resignation as president, which was accepted, and J. Henry Nichols, who has served as director since the organization of the company, was elected as his successor, and will have charge of the sales department. It is the intention of the company to bring out a full line of Dies, which they expect to have on the market by January 1. At the present time they are producing a full line of Machinists' Hand, Machine Screw, Pulley, Taper, Machine Nut and Patch Bolt Taps.

A circular which is being sent out by the S. M. Howes Company, 40 to 46 Union Street, Boston, Mass, indicates by its numerous illustrations the leading specialties for which they are noted in the way of Fire Place Fixtures. Among these illustrations are seen Basket and Chair Grates, Brass and Wrought Iron Andirons, Brass, Wrought Iron and Cast Iron Fire Sets, Fenders, Jamb Hooks, Bowles, Coal Hods, Brass, Wrought Iron and Woven Wood Carriers, Ash Doors, Gas Logs, Fire Place Dampers, etc.

The Union Mfg. Co., of Toledo, O., were recently re-organized and are now doing business under the name of the American Woodenware Mfg. Co. The new concern is made up of new stockholders excepting one and intends to increase more largely the capacity of its plant. A new catalogue will appear very shortly.

In an editorial notice of the One Minute Churn in our previous issue, we erroneously located the New York office of the company in Gold Street. It should have been 9 Old Slip.

The L. S. Starrett Co., Athol, Mass., has lately bought the entire fine tool business of the J. Stevens Arms & Tool Company, Chicopee Falls, Mass., including manufactured stock, stock in process, special tools for manufacturing, and goodwill, the latter company having given up the manufacture of tools.

F. & G. Haag & Co., 170-172 Center Street, New York, have recently issued a large and exhaustive catalogue in which is exploited their line of Chairs and Furniture, which includes Koch's Hydraulic Barber Chair, Barber Posts and Signs. Mirror Cases, Combination Fixtures which are furnished in a number of different styles to suit the requirements of all, Mug Cases, Stationary and Portable Wash Stands, Looking Glasses, Coat and Hat Hooks and Racks, etc., etc., all of which are very finely illustrated, the Barber Chairs being in colors. The Haag Co. also publish a catalogue of barber supplies. Both of the above-mentioned catalogues will be sent upon request.

The Ford Auger Bit Company, of Holyoke, Mass., have recently very largely increased their facilities for manufacturing their goods. They are now occupying a floor space of 35,000 square feet. They have recently put in a large amount of new machinery including eight trip hammers and have erected an addition to their forge room. They report that their goods are in such great demand that nearly every year they have doubled their capacity of the previous year.

STEVENS "EXTREME ACCURACY."

At the Individual Rifle Championship Match for Greater New York and vicinity, which was shot on November 3d, Dr. W. G. Hudson won the championship, breaking the 50 and 100 shot records, his score being 1,154 and 2,301, respectively. Dr. Hudson used the Stevens-Pope barrel, 33 caliber. Mr. Kelly was second, using a Stevens-Pope, and Mr. Fred C. Ross, third, using a regular Stevens 32-40. Nearly all the records during the past two years in rifle contests have been made and broken with either a Stevens or a Stevens-Pope. The word "Stevens" on a rifle is considered by all expert riflemen as meaning extreme accuracy.

A HIGH ORDER OF MARKSMANSHIP.

The sport of shooting at flying or moving objects with a rifle is increasing in popularity, and several noteworthy performances in this line of sport have occurred recently.

Prominent among those who have achieved success in this direction is LeRoy Leach, whose performance at Wood Lake, Neb., on Aug. 2d was claimed at that time to be the world's record in that line of shooting. Mr. Leach shot at 1¾-inch wooden blocks, thrown into the air by two assistants. He used a 22 caliber repeating rifle and a single bullet. The targets, 1,000 in number, were thrown by W. L. Chrysler and E. Tryon. One rifle was used throughout the shooting, which was fitted with plain open sights. The score made was as follows:

Shot at	Broke	Missed
50	48	First 2
50	47	First and last 2
450	448	Last 2
450	447	First 3
1000	990	10

This performance was duly witnessed and its correctness sworn to before a notary public. Excellent though it was, it did not satisfy Mr. Leach, who assayed to hit 1,000 targets straight. On Oct. 14th he attempted and accomplished this remarkable feat. It was also done at Wood Lake. Mr. Leach shot at the same 1¾-inch targets at a distance of 20 feet. He used a repeating rifle.

At both tests he used Peters 22 short cartridges loaded with King's Semi-Smokeless Powder, and did not wipe the barrel through the 1,000 shots.

This shooting was witnessed by I. J. Leach, Oliver Hall, A. S. McNamee, and C. E. Dennis, who made affidavit as to its correctness, which was sworn to before A. C. Johnson, a notary public at Wood Lake, Nev.

Mr. Leach is county surveyor of Cherry County, Nebraska. Shooting with him is a mere pastime, and his performance on Aug. 2d was his first attempt to make a world's record.

HARDWARE

VOL. XXVIII. NOVEMBER 10, 1903. NO. 3

HARDWARE is a Review of the American Hardware Market, specially devoted to the Retail Trade.

HARDWARE is published on the 10th and 25th of each month. The subscription is $1.00 a year, payable in advance.

Subscriptions may commence with any issue.

Remittances should always be made by New York Draft, Post-office or Express Money Order.

Register your letters when you remit by cash.

Foreign Subscriptions.—For each copy to be mailed outside the United States the Canadas, and Mexico, the price is $2.50 a year, postage prepaid.

Change of Date.—It takes two weeks to change the date, after your subscription is renewed.

Change of Address. Always give both your old and new address when you ask us to change your address.

The Name of your Post office and of the State you live in should always follow your own name when writing to this office. We cannot find your name on our books unless this is done.

Letters should be addressed

The Circulation of "Hardware" is Larger Than That of Any Other Paper in the United States Devoted Exclusively to the Hardware Trade.

Editorial Trade Review.

The delightful weather of the past two weeks has kept up the demand for a number of lines incidental with the prosecution of outdoor employment, with the result that the volume of general trade has been kept up at its high standard with an encouraging prospect for winter supplies as the season progresses toward the holidays with its manifold lines of special requirements demanding attention.

The natural trend of the trade movement as to prices in the future is toward slightly higher quotations on such lines as competition has forced down to a margin of profit out of proportion to the prosporous condition of the general trade. The average profit among certain lines has not been of a sufficiently remunerative character in consequence of the general movement toward increased wages among the employees; the slight changes in price of materials affecting the lines referred to, but little, if any.

The termination of the combination among shovel and spade manufacturers is regarded by the trade generally with favorable consideration; it lasted much longer than was originally prophesied and held the market in good shape; without being able to stifle aggressive competion, it gave a chance to outside makers to increase plants that will now use the open market with considerable advantage, which, while fastening and encouraging a lower range of prices, will permit of a wide distribution at a more remunerative percentage of profit.

The change in price decided upon in the Cut Nail market will have a tendency to make that staple line regain some of the lost popularity which higher quotations by comparison, did much to repress. The sale of cut nails will gradually assume a more extended distribution, when utility is not handicapped by a higher price. The change is welcomed by the trade with an earnestness that will tend to the carrying of larger stocks in the principal trade centers with the intention of keeping up an average supply.

The holiday trade is commanding attention, commensurate with its growing importance. The lines of special novelties, suitable for the season that have been added to regular Hardware stocks among the finer classes of goods, would surprise our grandfathers with their diversity and fitness for intelligent distribution. Many of these saleable special lines will be continued indefinitely, after an experience showing with what ease the trade can dispose of articles of standard excellence at a good margin of profit, although representing a grade of merit and expense involving liberal expenditures backed by a cultured demand. The handsomely fitted up stores which are now so easy of attainment from factories devoted to the manufacture of suitable shelving and attractive appliances generally, have undoubtedly done much to increase the desire to keep in stock high grade wares that sensibly catch the eye and open the pocket book.

THE DISSOLUTION OF THE SHOVEL ASSOCIATION.

The formal dissolution of the Shovel Association, which included the leading manufacturers of these important goods, has been announced. John H. Parks, the treasurer, under date of October 31, sending out a notice which reads as follows:—

> "This is to notify you that I do hereby avail myself of the right which I originally reserved, to revoke and cancel my conditional offer to you of a premium on your purchase of Shovels, Spades and Scoops, as per my printed Letter No. 1200-S.
>
> "Said conditional offer No. 1200-S, of a premium, will not apply on your purchases of Shovels, Spades and Scoops after this date."

This Association has had seven years of life, which certainly is a greater length of time than was supposed at the time of its inception. It was brought about, undoubtedly, by the fact that at the time of its inauguration the market was in an extremely unsettled condition, with reckless competition bringing the prices of the goods that were the most salable to a very unprofitable point, and the pool was agreed upon in order to correct this unsettled state of affairs. The high prices which immediately followed were not welcomed by the trade at large, but they soon got used to the fact that the prices were uniform, and enabled them to be jobbed at a correspondingly fair profit. The successive advances enabled a better average profit to be made possible, and reconciled the adverse criticism. The business of the jobbing trade was held securely by the adoption of a system of rebates, the settling of which was adverse to dealing with competing makers not in the combination. Certain lines, however, that were within reach of outside manufacturers were found to compete successfully in dividing the trade, and this naturally grew more largely as facilities by these outside manufacturers were increased until now the line of outside goods may be considered as in a good fighting condition. An effort was made recently to compel the jobbers to purchase all their lines of the associated manufacturers or else suffer a loss of some of the rebates, and this, no doubt, was the foundation of the change that was made necessary. It is important to remember that the Ames Shovel & Tool Co., having purchased quite a number of the companies in the consolidation, control a large proportion of the output, owning as they do so many of the leading brands. This particular fact, no doubt, had its bearing in making less important factors in the association anxious to do business on their own account without the restrictions that are necessary under the rules of the combine. It is also possible that contemplated litigation in regard to the recovery of disputed rebates, as well as the operation of laws of an anti-trust character producing decisions adverse to their interests, has had a bearing in bringing about this dissolution of a most important combination. The operations of the trust has brought into existence a competition of an especially aggressive description, with steadily increasing facilities, which will make low prices on smooth

Digitized by Google

goods possible for some time to come. There is not the slightest doubt but that an irregular market for a time will ensue and the old state of affairs be brought about to some considerable extent, but this will eventually regulate itself, and the trade generally it is likely, will appreciate the fact that there is now an open market for these goods.

THE CONVENTIONS OF THE HARDWARE FRATERNITY.

The National Hardware Association commence their Convention labors on Wednesday morning, November 18th. In the afternoon it is on the programme for the manufacturers to get to work on theirs. It promises to be a record attendance; accommodations are ample; programmes possess more than the usual promise for working reforms for commercial advantage, and results cannot fail in being satisfactory. The work of the associations will extend until Friday, the jobbers bringing theirs to an end in the morning and the manufacturers theirs to a finish in the afternoon, when they will meet in fraternal conclave to witness the installation of the newly-elected officers of the Manufacturers' Association. A banquet given by the manufacturers to the jobbers will bring the festivities to a finish on Friday evening. Judging by the requests received for reservation of accommodations at the Hotel Rudolph, it is believed that the largest attendance is possible for both manufacturers and jobbers at this combined convention of any meeting so far held since organization. The committee having in charge the special train from Chicago *en route* to Atlantic City, carrying delegates and others to the conventions of the National Hardware Association and the American Hardware Manufacturers' Association, have decided to route this special train via the Lake Shore and Lehigh Valley instead of Pennsylvania Railroad, as originally planned. The reason for this change in the programme is the apparent inability of the Pennsylvania Railroad officials to give the committee definite assurance that the proper kind of equipment which the committee thought they were entitled to would be supplied. The arrangements now are that the special train will leave the La Salle Station, corner of Van Buren and La Salle Streets, Chicago, on Monday, November 16, at 2 p. m., reaching Atlantic City between 4 and 5 p. m. on the afternoon of November 17. The committee feel sure that those who participate in the trip will particularly enjoy the daylight run through the State of Pennsylvania over the Lehigh Valley road. The fare for the round trip will be one and one-third, with three days' layover after the closing day of the convention. By depositing the return part of the ticket at the Reading terminal at Philadelphia a stopover will be allowed for ten days, or, in other words, until December 4. This will enable those who desire to visit New York and other points to have ample time for these side trips. The Ringgold Band, of Reading, Pa., will accompany the party from Philadelphia to Atlantic City. The train will stop at Elkhart, Toledo and Cleveland, at which points members and guests may join the party.

MANUFACTURERS SHOULD HASTEN TO JOIN.

There will be a numerous attendance of manufacturers at the Hotel Rudolph, Atlantic City, N. J., on the occasion of the joint conventions, when the American Hardware Manufacturers and the National Hardware Jobbers have their annual pow-wow. It would seem as though every manufacturer of national importance at any rate, would be glad to enroll himself under the standard of an aggregation of ability such as is shown in perusing the roll of members of the American Hardware Manufacturers' Association. The requisites for membership are easily understood, and would seem to tempt those outside the fold by offering so much that promises to be beneficial to the clan. The following clause defines the ease with which it may be accomplished:

> "Any firm or corporation engaged in the manufacture of goods handled by the Hardware trade may, upon the recommendation of the Membership Committee and the unanimous consent of the Executive Committee, become a member of this Association upon subscribing to the Constitution and By-Laws and the payment of a membership fee of ten dollars ($10.00). No manufacturer who is also engaged in the jobbing business can become a member, nor are manufacturers' agents eligible to membership in this association."

It is the intention to waive the annual dues of $15 for those new members who send on their applications at once, so that the membership fee of $10 will be accepted as covering both.

AMERICAN AGENTS IN FOREIGN COUNTRIES.

United States Consul Halstead, Birmingham, England, writes as follows:

Having occasion to write to an American manufacturing company and not knowing the address of the London agency, I suggested that, though it might not seem worth while sending their London address to consuls, it might pay them, as they advertised extensively in American magazines, to insert the address of their London agency in their advertisements in such magazines as have a good sale in this country, and when advertising a special article quoting prices to give the prices in English money. Upon receipt of my letter this American concern wrote:

> "We beg to thank you for your information in regard to American magazines and their circulation in England, and are calling the attention of our London manager to this matter."

The London agent wrote me a letter which indicated that the communication he had received from his firm had puzzled him greatly. Replying to the agent's letter, I wrote:

> "I have only to say that I suggested to your home office that the several American magazines which are sold somewhat extensively in this market should have at the bottom of their American advertisements the address of the English agent of advertisers and quoted prices should be in English money, and having read my letter carelessly your home concern wrote me that they had 'called their English department's attention to the matter;' but as the advertisements are placed in magazines in the United States and by the home office, I have written them asking what good it would do them to call their English department's attention to the hint I had given them. This is but an instance of the many cases in which an American consul finds it difficult to be of assistance to the manufacturers of his country."

The London agent, in reply, said he was taking up the matter with the home firm, asking them to include his address in their advertisements, and intimated that my letter would assist him in getting them to do so. He concluded his letter as follows:

> "I have for many years been with our company and am constantly exerting my best efforts on behalf of their export business, which I am sorry to say so few American manufacturers understand; but I have no doubt the time will come when they will pay closer attention to the requirements of foreign trade."

SOUTH AFRICAN INDUSTRIAL EXHIBITION.

When the South Africa British and Colonial Exhibition, to be held in the Gardens, near Government House, Cape Town, in 1904 and 1905, was first planned it was decided to rule out all goods not manufactured in Great Britain or her colonies.

I inclose a copy of a letter received from the secretary, by which it will be seen that the promoters have changed their plan and have now opened this industrial exhibition to foreign exhibitors as well as to British and colonial exhibitors.

As there is such great inquiry from manufacturers in the United States for information in refernce to trade in South Africa, if this change of plan were published it might be the cause of our manufacturers sending their goods here on exhibition to increase their trade. I receive several inquiries every week, the tone of which makes it evident that many people in the United States have a very vague idea of South Africa.

I will report later the exact date of opening, which will probably be in November, 1904, to continue until about May, 1905. W. R. BIGHAM, *Consul-General.*

CAPE TOWN, CAPE COLONY, August 22, 1903.

LEGAL CORRESPONDENCE.

Any subscriber to "HARDWARE" is privileged to ask any legal question he pleases in this Department and it will be answered free of charge. Address all communications to Law Editor "HARDWARE," No. 309 Broadway, New York City.

Amount Recoverable in Action for Negligence Causing Death.

QUESTION: About a year ago, my son, a boy of fifteen years of age, was run over by a cable car in New York City and killed. I have never brought suit, but a friend has recently suggested that I do so. Kindly inform me whether there is any limit as to the amount that can be recovered in a case of this kind, and also how long I have in which to commence suit.

REPLY: Under the common law no cause of action existed to recover damages for the death of a person caused by the negligence of another. The Legislature of this State, recognizing the faulty condition of the common law, passed a statute creating a cause of action in a case of this kind, but limited the amount of recovery to $5,000. This statute remained in force for some time until the saying that under the law of this State it was cheaper to kill than to wound became quite common. This statute was superceded by our present statute, in which no amount is fixed as a limit of recovery. The period of time within which this action must be brought, under section 1902 of the New York code of civil procedure, is two years after the decedent's death.

Action to Establish a Lost or Destroyed Will.

QUESTION: My father died some time ago and we have been unable to find any will, although we are confident that he left one. We have questioned his lawyer and he says that he drew a will for my father about a year before he died. About one week after my father's death there was a fire in our house and a private box belonging to him, together with its contents, were entirely destroyed. We have always believed that the will was in this box and was destroyed. How will his property be distributed? Could the will be probated if its contents could be proved by the lawyer who drew it?

REPLY: Unless this will is proved as a lost or destroyed will and admitted to probate as such, your father's real property will descend according to the statutes of descent in force where the property is situated, and his personal property would pass according to the statute of distribution in force at the place of your father's domicile. If you can prove the contents of the will and the fact that it was either lost or destroyed after his death it may be admitted to probate, and the property would be distributed according to the terms of the will.

Estate by Entirety Not Abrogated by Real Property. Law of 1898.

QUESTION: Some years ago certain property in New York was deeded to myself and wife and to A and his wife; the deed reciting that myself and wife and A and wife took the property as tenants by the entirety. My wife has since died, and I have entered into a contract for the sale of this property. I understood at the time I received the property that my wife and I were entitled to one-half of the property and that A and his wife were entitled to the other half. The party to whom I agreed to sell my interest refuses to accept the deed executed by myself alone, upon the ground that it should be joined in by the heirs of my wife. Kindly inform me whether this is a good objection to my deed?

REPLY: It has recently been decided in the case of Price vs. Pestka, 54 Appellate Division, 60, that in a case such as you describe it is not necessary for the deed to be joined in by the heirs of the deceased party. Under the facts as you describe them, you and your wife were tenants by the entirety of a one-half undivided interest of the property deeded. Upon your wife's death her interest in the undivided share passed to you as the survivor, and no interest whatever passed to any of her descendants. This is a peculiar incident of the estate by the entirety, and in the recent authority referred to the court holds that this estate still exists in New York State and has in no way been abrogated by certain sections of the property law, which provides that every estate granted to two or more persons shall be a tenancy in common, unless expressly declared to be a joint tenancy.

Husband's Right of Courtesy.

QUESTION: For a number of years I have been a resident of the State of Massachusetts. During my wife's married life she owned considerable property in Massachusetts and in Minnesota. We have had several children, one of whom died some years ago. I desire to be informed whether or not, under the laws of Massachusetts and Minnesota, I have an estate which I understand is called courtesy, should my wife die without leaving any will? Kindly also inform me whether my wife could make a will depriving me of all interest in her property.

REPLY: As to your wife's property in Massachusetts, we are of the opinion, that if your wife dies intestate owning property situated in Massachusetts, issue of your marriage having been born, you would be entitled upon your wife's death to estate by the courtesy, which estate consists of a life interest, to terminate upon your death in all the property in this State in which your wife was possessed at any time during her marriage, of what is termed an estate of inheritance. In Massachusetts the husband's estate of courtesy cannot be defeated by his wife without his consent, nor can a wife in Massachusetts dispose of her husband's estate in her will unless he consents in writing to such will.

The laws of Minnesota differ from those of Massachusetts in regard to a husband's right of courtesy in property owned by the wife. In this State the common-law rights of a husband to an estate by the courtesy in the property of his wife, and the right of the wife to an estate of dower in lands owned by her husband, have been for some time past abolished by statute. The laws of descent in this State, however, practically make provision for the husband of a wife who dies intestate similar to the rights accorded a husband, such as in Massachusetts. Similar provision is made in the Minnesota statutes to those contained in the Massachusetts', prohibiting the wife from disposing of property which was owned by her during marriage, without the consent of her husband.

Acknowledgement Before a Notary Public.

QUESTION: I am about to enter into a contract with a man and would like to know whether any acknowledgement of the contract is necessary to make the contract valid. If any particular form of acknowledgement is used in New York, kindly inform me where I can get such a form.

REPLY: No acknowledgement before a notary public is necessary to make a contract valid. The acknowledgement of a contract before a notary public has nothing to do with the validity of the contract itself. Its purpose is to entitle the contract or other instrument to be read in evidence or recorded in a public office without other proof than signatures of the parties. This oftentimes is extremely important and it often occurs that a person trying to prove the signature of a party to a contract which is not acknowledged will find it difficult in the extreme, if not impossible. If the signature in dispute is acknowledged before a duly authorized notary public the contract only need be offered without further proof. It will, therefore, be seen that, although an acknowledgement is in no way necessary to the validity of the instrument, nevertheless every contract should be acknowledged or witnessed, for the purpose of proving the signatures should they be disputed. The form of an individual acknowledgement in use in this State is as follows: "State of New York, County of , ss: On this day of September, 1903, before me personally came John Doe, to me known and known to me to be the individual described in and who executed the foregoing instrument, and he thereupon duly acknowledged to me that he executed the same."

◆

Charles W. S. Banks, 612 Columbia Avenue, Baltimore, Md., intends opening January 1st, 1904, a "Mammoth 5 and 10 cent Bazaar," and would be pleased to receive from any of our advertisers catalogues and quotations of goods suitable for this class of trade for "spot cash only."

RECENT TRADE PUBLICATIONS.

THE CHAMPION SAFETY LOCK COMPANY, Geneva, Ohio, in a recently issued envelope size pamphlet catalogue, exploit the merits of their Champion Germ Proof Filters. Style A is an automatic self-cleaning filter, made of brass and nickel plated; operates perfectly, cleaning the filter thoroughly, easily and quickly. The cleaner consists of a metal form which holds a strip of very hard stone extending along the entire length of the filtering tube and held against it by the automatic cleaner adjuster. In style B the filtering tube is attached to the cap and can be quickly taken out by removing the clamp. It is easily cleaned with the brush furnished and gives excellent satisfaction. Style C, the company claim, to be the best and most convenient faucet filter, and does not interfere with the regular use of the faucet. By simply turning the key of the special connection, a supply of either filtered or unfiltered water can be obtained without removing the filter from the faucet. Styles B and C are also made of brass and nickel plated. The filtering medium used is a thick, fine, porous natural stone tube, impervious even to microscopic particles of solid matter, and to all organic germs.

MORLEY BROTHERS, Saginaw, Mich., have issued an attractive folder exploiting their Blue Line of lumbering tools. Under a heading of "Facts," they state: "We make good lumbering tools. That is why we have sold so many and are going to sell more. We don't know it all and neither does any one else, even though they think they do. We have been in the business for 40 years and that experience stands back of every article that leaves our factory. We have aimed for one thing, quality, and have hit the mark. Although talk is cheap, we could not afford to put it so strong, if our goods weren't stronger." Below these remarks stands a blacksmith holding the sledge and tongs. Again, below this, is a map of the world showing where the Blue Line lumbering tools are used, which is in part of every country on the globe.

ACORN BRASS MFG. CO., Chicago, Ill., have issued a folder which might well be termed "strenuous" advertising their "M. & M." and "Doran" Mantles. The folder is one that would pay tribute to any enterprising advertiser so decided and to the point is their method of presenting facts. Their mantles are carefully made of thorium and cerium. The company state that owing to the great demand for their mantles they have recently been able to place an enormous contract for chemicals at a price which will greatly lessen the cost of manufacture. They have therefore decided to give their customers the advantage of this reduction, and, while still maintaining the same high standard for which their mantles have always been renowned, they are quoting them at very much reduced prices. Their theory is that a cheap mantle is dear at any price, and a good mantle is always the cheapest in the end.

THE OSGOOD SCALE COMPANY, Binghamton, N. Y., are the publishers of a very handsome new catalogue, of 63 pages, the cover of which is a moss green with just enough red introduced to make it attractive. The book itself is indeed a work of art, and will materially help dealers possessing one, to sell the Osgood scales of which it illustrates a splendid line. Their line of Dormant, Warehouse and Hopper scales bear the following general description in workmanship, material and finish: The woodwork including the platform, single pillar and cap, in all hardwood. The platform is seasoned oak, finished in the natural color and varnished. The single pillar and cap are finished in blue and gold striped. The double iron pillars are finished in black, and gold striped. The levers and castings are all made extra heavy, with sliding poise. The pivots and bearings throughout are of the best imported tool steel, carefully tempered. Each of the many descriptions of the Osgood scales are made, in point of excellence, on a parallel with the above scales, and everything about their scales is made in the most thorough manner, by experienced workmen.

THE LANSING WHEELBARROW COMPANY, Lansing, Mich., have sent out a very well arranged catalogue, being their No. 7-A, devoted to their wheelbarrows, warehouse trucks, field rollers, fence machines, etc., etc., also horse-pokes, hods, skids, rubber tired wheels, hand carts, etc., etc. The book contains 157 pages, and has an attractive red cover with black embossed lettering. The company carry a stock of from 4,000,000 to 6,000,000 feet of hardwood lumber which enables them to fill orders for special barrows, trucks, etc. promptly and from seasoned materials. Many of the goods shown in the catalogue the company state are not ordernarily kept in stock by the trade, at the same time a dealer may have a call for them at any time, and they suggest that it would be advantageous to have this catalogue conveniently at hand.

THE J. C. CLARK COMPANY, Inc., Portage, Wis., have recently offered to their patrons a booklet, which is a treatise on the Clark Fuel Saver, which they claim, is the greatest fuel saving invention ever discovered, and they challenge the world to produce its equal. Prof. Richter, mechanical engineer, made an exhaustive test of this fuel saver and is satisfied that it is of genuine value. He states as a result of his test: "The Clark Preheater will save a large per cent. of the fuel. The efficiency of the average steam boiler is about 60 per cent., and in the average stove it is higher. It is evident that it would be exceedingly difficult to raise the efficiency by such an amount as to save one-fourth of the fuel used. The Clark stove saves altogether about 21 per cent., therefore, it is ahead of anything now in use and as near perfect perhaps as anything can be." The booklet gives full information and description of the fuel saver and makes interesting as well as instructive reading.

THE SAMUEL WINSLOW SKATE MFG. CO., Worcester, Mass., have issued a high-grade catalogue which is descriptive and illustrative of their Ice Skates. On the first page of the catalogue is given a table showing the relative sizes of shoes and skates. The second and third pages contain an extensive telegraphic code which is a new one issued by the company for 1903, which customers are requested to use, all former codes being discontinued. One of the many excellent skates manufactured by the Winslow Skate Co. is their No. 1360 Hockey Skate, made in sizes 8 to 12 inches. The runners are the flanged model making them light but strong. They are made from welded steel and iron, hardened and tempered and highly polished. The parts are made from special cold rolled steel with polished edges. The entire skate is nickel plated and buffed throughout. Also made in all grades when ordered for ladies. For ladies' use the toe plates are narrower and the heel plates smaller than on men's skates. The company warrant every pair.

THE RICHARDS MFG. CO., Aurora, Ill., are presenting to the trade a 55-page catalogue, the embossed cover of which is extremely artistic. The catalogue is entirely devoted to Hangers of every description and fixtures for same. The Richards Mfg. Co. announce that they have made arrangements with the Richards & Sencenbaugh Mfg. Co., of Aurora, Ill., whereby they control the sale of their entire output of Door Hangers and Hardware Specialties, which, together with other goods they have added to their line, they are placing on the market. They further announce that they have associated with them J. H. Pease, H. O. Spencer, and W. H. Fitch, previously connected with the Wilcox Manufacturing Co., of Aurora, Ill., and O. N. Staley, of the Richards & Sencenbaugh Mfg. Co. They also retain the travelling salesmen formerly employed by the Richards & Sencenbaugh Mfg. Co., who will regularly visit their trade as in the past. The line of Hangers shown in the above-mentioned catalogue embodies all the leading features and improvements in Door Hangers, and it will be found a valuable help to dealers interested.

WHAT EXHIBITS WILL PAY AT ST. LOUIS?

A rational answer to the above question depends mainly on two things: the interests to be exploited and the audience which is to be interested. First of all, the manufacturer must find some way to attractively install his wares. Experts in designing constructions for World's Fairs should be employed; for, aside from the evident advantage to the exhibitor of being able to see on paper the detail of his proposed installation, these sketches are necessary for submission to the St. Louis Exposition authorities before space will be awarded. And by this is meant, more particularly, sketches of the display of merchandise. Proper booths and showcases are important and must be shown, but the arrangement of the manufactured articles and the features incorporated with them are the most vital to the success of an exhibit. Chief Hulbert of the Department of Manufactures gives out a cut, describing and explaining what is needed to satisfy his ruling that "about sixty days before the general allotments are made each applicant will be asked to submit a sketch, ground plan, and description of his proposed installation, and the allotments (size and location) will depend upon the attractiveness of the display from an Exposition standpoint, as well as its value educationally and commercially. Special favorable consideration is assured all exhibits which consist of or include machinery in operation, to demonstrate their various functions by the actual production of the manufactured article."

Many concerns have several irons in the fire. The great

MILAN H. HURLBERT, CHIEF DEPARTMENT OF MANUFACTURES.

manufacturer is called upon to exhibit an immense line of material of infinite variety. In the rush for novelties his wares and their styles quickly change. Here, now, is a great World's Fair opening its doors of opportunity to him and his product. If he wishes to avail himself of it by making an exhibit, he must begin to prepare many months ahead. It is impossible for him to tell what his product will be at that time. Yet he must prepare a display—what is he going to do about it?

In considering this problem, the wise manufacturer will decide what the main currents of demand are in his business and what are its lasting features. The trend of the time, commercially speaking, and changes in the method of distribution are all of moment. Having considered these vital questions, the wise exhibitor will expend effort, money, taste and ingenuity on the phases of business that have come to stay. He may, of course, anticipate coming demand. In business, caution and audacity travel together. To produce a new pattern so good that competitors are forced to imitate it means, sometimes, a fortune made. The world pays a high price for originality, provided it has the capital to make itself known.

In the case of the Universal Exposition at St. Louis, all displays should be international in caste. The exhibitor at that Exposition will have to deal, not merely with the territory of the Louisiana Purchase, vast as that section is, he will meet the people of every State, Territory, and nations in large numbers. The Japs, the Hindu, the Chinaman, the Russian, the Frenchman, the Englishman, the Scotchman, the Dutchman, Germans, Austrians, Hungarians, Italians, Spaniards, Greeks, and citizens of many other nationalities will carefully examine all exhibits which are kindred to their callings. But, after all, unless the exhibitor be especially engaged in foreign trade, the American is the chief man to capture. His numbers count, and, man for man, his purchasing power excels. He is sharp-witted, too, quick to see an advantage or a defect. Have a care for him, he will be at St. Louis, millions strong, more ready to buy than ever, with less sectional prejudice and more cash than ever before.

WORLD'S FAIR NEWS NOTES.

The North American Skate League will hold its 1904 tournament on the World's Fair grounds June 11-14.

The house in which the American flag was born will be reproduced by the Betsey Ross Memorial Association. The original house yet stands in Philadelphia.

Paris telegrams say that the jewelry already listed for the French exhibits at the World's Fair amounts in value to $4,000,000 and includes one necklace worth $500,000.

The National Firemen's Association in session on September 29 at Chicago elected George C. Hale President and resolved to hold next year's meeting in the World's Fair city.

Each fruit grower of New York will be furnished with a padded barrel by the State commission to the World's Fair. The barrel will be packed by the grower and shipped to the Fair at State expense.

The T. P. A. building at the World's Fair, which will be headquarters for the commercial travelers who visit the exposition next year, is nearly finished.

The Cabildo, Louisiana's State building at the World's Fair, is enclosed, and is receiving its staff decorations. The building is an exact reproduction of the one in which the Louisiana Purchase treaty was signed 100 years ago.

Excavation for the lily and lotus lakes on the Agriculture grounds at the World's Fair has been finished. Many of the willows and hardy aquatic plants that will line the banks have been planted.

One thousand rare plants from Mexico that will constitute a part of the Mexican exhibit at the World's Fair are enroute. They will be placed in hot houses and transplanted in the gardens around the Mexican pavilion next Spring.

French exhibits at the World's Fair next year will number 5,000 against 3,000 at the Chicago Fair, and will excel in general interest and completeness any previous French display. They will include an elaborate exhibit of the Government's furniture, Gobelin and Beauvaise tapestries, Serves pottery, laces, silks, educational methods, farming, mining and other industrial exhibits.

PETERS QUALITY.

At the recent Atlanta, Ga., trap shooting tournament, Harry Hall, of Albany, Ga., made high average, breaking 163 out of 175 targets. Mr. Hall used Peters factory loaded shells.

At Millbrook, N. Y., on Oct. 16th, in a 100 target race for a gold medal and the Dutchess County championship, F. B. Stephenson with Peters Premier factory loaded shells was victorious. Mr. Stephenson was the only man to break 25 straight.

On Oct. 12th and 13th, at Mahanoy City, Pa., Neaf Apgar won high expert average and Fen Cooper high amateur average. Both used Peters Ideal factory loaded shells.

NEW GOODS AND SPECIALTIES.

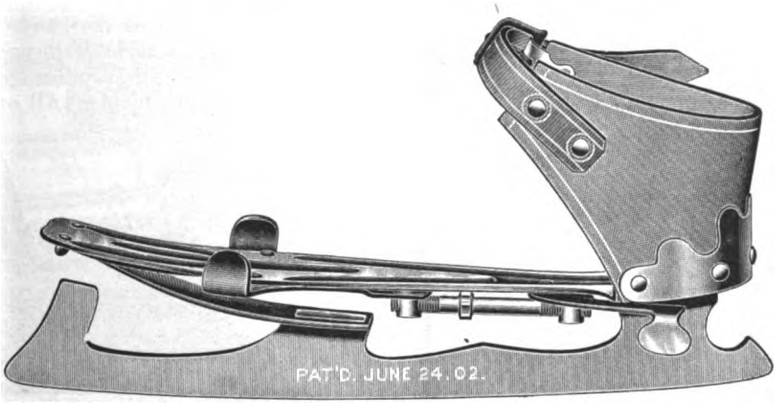
YANKEE TOOL SET NO. 100.

Among the recent additions to the line of "Yankee" specialties, manufactured by North Bros.' Mfg. Co., Philadelphia, Pa., the "Yankee" tool set No. 100 has proved to be an exceedingly popular seller wherever introduced, evidently filling a want among mechanics' tools that is at least supplied. We present an illustration of this tool set herewith. These Yankee Screw Drivers are put up in substantial and

YANKEE TOOL SET NO. 100.

well finished boxes, designed to be used by mechanics who desire to keep tools in fine order, and by gentlemen or amateur mechanics who especially appreciate tools put up in handsome sets. The box, which is very substantially made of oak, tastefully finished, contains one each of the following "Yankee" tools: No. 30 Spiral Ratchet Screw Driver, a Chuck, with drill points, eight sizes, 1-16, 5-64, 3-32, 7-64, ⅛, 9-64, 5-32, 11-64 inches, to use for drilling holes with the No. 30 Spiral Ratchet Screw Driver; a Countersink to use in the same tool. They are made in two styles: One No. 11 Ratchet Screw Driver, with blade 6 inches long; one No. 15 Ratchet Screw Driver, with finger turn on blade, with blade 3 inches long. These are the styles and sizes of "Yankee" tools most in demand, and the combination in a set covers all the usual requirements in tools for driving and drawing out screws. The tools are easily removed from box, and when it is closed are held firmly in place. The wood box is packed in an attractive paper box, and so packed weighs 3½ lbs. per set. Box measures 12½x4¼x2¾ inches.

THE "BEST YET" RIVETING MACHINE NO. 20.

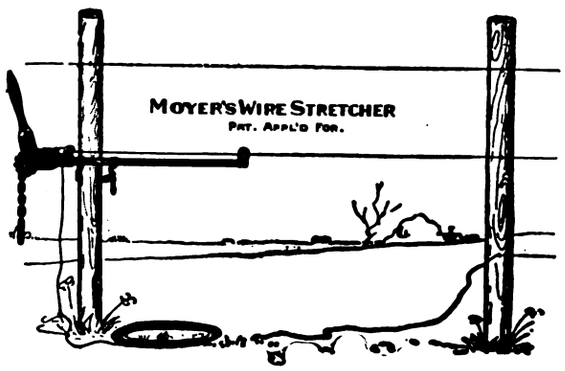


Among the riveting machines manufactured by the F. H. Smith Manufacturing Company, the "Best Yet" No. 20, of which we present an illustration, has received the commendation of the trade and achieved a merited success. It is an improvement on the "Best Yet" No. 10 machine also made by this company in the addition of a punch for punching the buckle holes. It automatically adjusts itself and will set any lengths of harness or shoe rivets, tubular or split without change of any kind. When punching for buckles a board a half inch thick is laid on the face of the anvil and placing the strop on this board by punching the lever of the machine down, the punch is forced through the leather with the greatest ease. The machine weighs 3½ pounds, the shipping weight being 55 pounds per dozen.

"BEST YET" RIVETING MACHINE.

THE "BROWNIE" SPRING ICE SKATE.

Brown Spring Ice Skate Co., Webster City, Iowa, are placing upon the market the "Brownie" Spring Ice Skate, of which we give an illustration, clearly showing its peculiar construction and practical utility. It is manufactured from the best open-hearth steel, with hardened and tempered runners; the springs are of the best crucible steel of tested and warranted quality, the skate being highly polished and nickeled throughout. These skates are provided with a novel device to adjust the toe of the skate a desired distance to the inside of toe of feet, giving it a position that is so desirable for correct and easy skating. The manufacturers claim that this improvement makes this a fast and up-to-date skate, there being no jar and no lame ankles over rough ice. Spring acts on same principle as spring-board to jumper. Drives the skater along fast and easy. Makes skating a greater pleasure and saves strength. For fancy curves, heel and toe skating, and for fast work forwards or backwards it is claimed to have no equal. The spring being located at the forward part of the skate, increases or softens the action of the skater as he or she ends the stroke, in accordance with the will of the skater.



"BROWNIE" SPRING ICE SKATE.

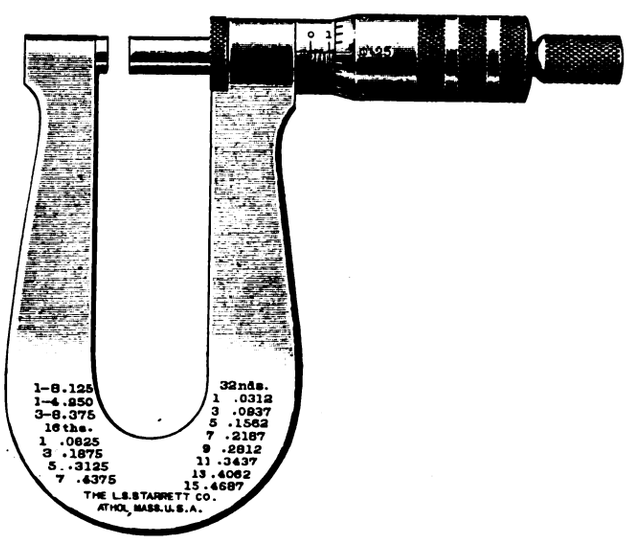
MOYERS WIRE STRETCHER.



Moyers Wire Stretcher, of which we give an illustration in the course of this article, is a specialty that is made and marketed by the Wood Brothers' Steel Self-Feeder Co., of Des Moines, Iowa, which among the many similar appliances before the trade, presents commendable features that would interest the builder of wire fences. Among its many advantages may be mentioned: It pulls the wire ten inches past the post. Being an absolutely new device for splicing broken wire, the user splices the wire and then stretches the

splice, and the wire, it is claimed, will be found as tight as it was before the break. There is no loose wire after removing the stretcher. The new roller clutch prevents slipping on the wire. It is claimed to be just the thing for woven wire fences, having five times the leverage of the ordinary wire stretcher. This new appliance is sold entirely on its merits under a positive guarantee. Full particulars will be furnished on request by addressing the manufacturer at above address.

MICROMETER SHEET METAL GAUGE NO. 222.

Among the many valuable tools which form the product of the factories of L. S. Starrett Co., Athol, Mass., an important one is the Micrometer Sheet Metal Gauge No. 222, which we illustrate herewith. This gauge has 2 inch depth of throat to reach over the edge of sheet metal to gauge its thickness nearer the center. Has ½ inch movement of screw. The screw is covered by a patent shell with its indicator

MICROMETER SHEET METAL GAUGE, NO. 222.

mark, which enables one to take up wear to a nicety and insures a correct reading, the anvil remaining solid. It also has a patent ratchet friction feed, which insures uniform pressure against the work without springing the frame, as well as a patent lock nut to lock the spindle firm when desired to make a solid gauge. Decimal equivalents are stamped on the frame (except those reading in the Metric system. Weight of gauge, 3 ozs.

THE UDELL MEDICINE CABINET.

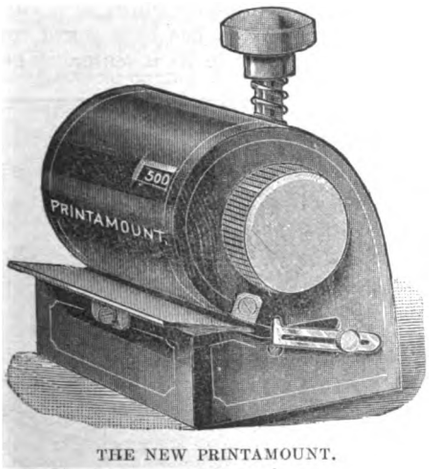
The Udell Works, Indianapolis, Ind., are the manufacturers of the Medicine Cabinet No. 130 of which we present an illustration, and which they are placing upon the market through the House Furnishing and Furniture trade. Specialties of this exclusively family character are being gradually added with others of similar utility by the Hardware trade, as being up-to-date goods that meet with ready recognition

UDELL MEDICINE CABINET NO. 130.

when handled by intelligent salesmen. This is a unique piece of furniture, well made, and wherever introduced has met with success in the introduction thereof. It is made in the modern woods, such as G. O. and Antwerp Oak, also weathered oak. It is 23 inches high, 19 inches wide and 8 inches deep. Has an artistic glass on doors 6x14 inches each, and is altogether an attractive addition to the household necessities.

A NEW SWEEPER, "NATIONAL QUEEN."

We show herewith an illustration of the National Sweeper Company's new sweeper, "National Queen," Roller Bearing, which they claim to be the handsomest carpet sweeper produced. The box is made of the choicest three-ply veneers, Hungarian ash, figured walnut, figured mahogany, curly birch and bird's eye maple. All of the trimmings of this



THE "NATIONAL QUEEN" SWEEPER.

sweeper are duplex plated, giving the parts not only a more permanent lustre but a much higher finish. Another new feature of this sweeper, "National Queen," is the method of packing. Each sweeper is placed in one of the National Sweeper Company's patented cartons of a special design. The carton is printed in five colors, and makes a very striking display, and makes it an especially desirable sweeper for the holiday trade.

THE NEW PRINTAMOUNT.

One of the latest devices which has been invented for the protection of bank checks, the latest and seemingly the most perfect, is the New Printamount, which is manufactured by the Wesley Mfg. Co., 31 Beekman Street, New York, and is

THE NEW PRINTAMOUNT.

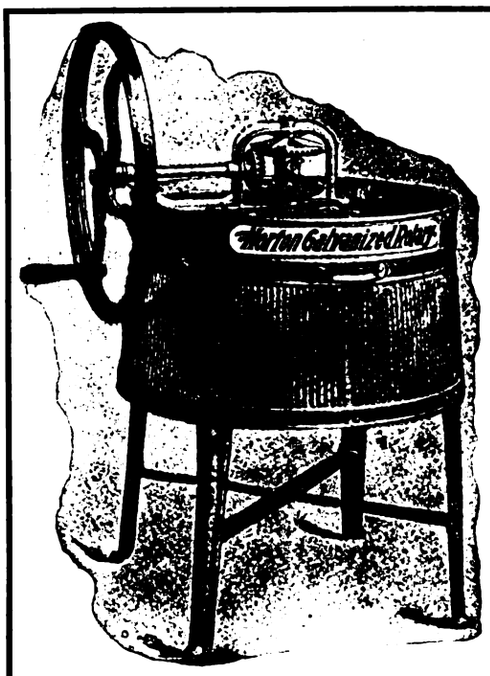
capable of making forty combinations reading similarly to this line, only differing in the amount:—

NOT OVER FOUR HUNDRED FIFTY $450

The Printamount presents an ornamental appearance on the desk or counter of banking house or mercantile establishment, being handsomely japanned with nickeled trimmings. They are marketed at $12 each, and are a valuable addition to financial safeguards.

RELIANCE WICKLESS OIL STOVE.

The Reliance Wickless Blue Flame Oil Stove, herewith illustrated, is manufactured by the Shelby Stove & Mfg. Co., Shelby, Ohio. They claim for them a great many points of superiority which ought to interest dealers and which should make them very easy stoves to sell. In the construction of all of their stoves they use only the best of materials, such as



"RELIANCE" WICKLESS OIL STOVE.

galvanized malleable fittings, best black wrought pipe, two-pass cold rolled sheet steel, full brass angles and stand pipes. The burner proper is made of but two pieces of solid sheet brass. They are very simple in construction with the number of vital joints reduced to a minimum. There are but six joints in the burners and feed pipe. The construction of their stoves is stronger yet lighter than others. The sub-tank is substantial and neat. The burner is entirely enclosed, top and bottom, admitting only sufficient air for proper mixing. The valve has no abrupt angles, and sediment cannot clog the valve seat. Burners may be easily cleaned; when burning, the flame responds instantly to the slightest movement of the valve, operating light gas. The burners are quickly regulated and are absolutely fool proof. The burners have a beautiful blue flame and perfect combustion. They have no odor and do not smoke. Their factory has a capacity of 50,000 stoves a year. They have recently made the third large addition to their buildings and have also installed an immense amount of new and expensive machinery. They are prepared to make prompt deliveries of all orders. The manufacturers state they will be glad to send catalogues and information to dealers upon request.

NEW ADJUSTABLE WRENCH.

With a large share of the machinery which is used in our manufacturing industries the builders furnish special wrenches, which will only fit nuts of a certain size and are intended to be used in connection with the one machine. These, of course, need no adjusting to fit the nut, and, being ready for instant use, are a great convenience and save time for the machinist. But there are many instances in the every-day work of the machinist, and some other classes of labor, also, where a wrench which can be rapidly set to any necessary size will prove a great advantage to the man who is handling it. The usual form of wrench requires the turning of a thumbwheel several revolutions to vary the distance between the jaws even a quarter of an inch, and there can be no movement of the jaw without turning this screw. Here is a wrench which has the movable jaw perfectly free to slide from closure to its widest opening, only coming to a stop wherever the cam block is set. This cam block rests in the centre of the slotted handle, and is so pivoted that its edge is eccentric to the pin on which it revolves. Whether the block is tilted to stop the jaw close to the fixed head or to allow it to slide freely the whole length of the opening, the cam block engages the rear of the jaw in such a manner as to afford a strong support for the movable jaw. It requires no rotation of adjusting screws, but only a simple turn of the block and a sliding movement of the loose jaw to set the wrench, which probably has quite as much expansion as the majority of light wrenches in common use.

Elisha F. Hirst, of Richmond, Ind., is the inventor.

THE LATEST CREATION IN WASHING MACHINES

THE HORTON GALVANIZED ROTARY WASHER NO. 9

Built of steel throughout and heavily galvanized.
Lighter and stronger than wooden machines.

IT SPEAKS FOR ITSELF

L. & I. J. WHITE CO.

In our last issue we referred to the increasing assortment shown by the new catalogue and price list of the L. & I. J. White Co., Buffalo, N. Y. Referring as we did to the facilities afforded by their modern and up-to-date plant equipped with every possible labor-saving device that would give prestige to their perfect production, we unintentionally omitted an engraving showing the extent of this plant, and take pleasure in presenting it at this time.

PLANT OF THE L. & I. J. WHITE CO., BUFFALO, N. Y.

KOHLER SHOVELS AND SPADES.

F. E. Kohler & Co., in order to keep pace with the demands made upon their shovel department, have been compelled to install a 50-H.P. gas engine as well as a number of other improvements designed to facilitate the work of producing smooth goods. Meeting better success than they anticipated, considering the strenuous opposition of the associated shovel makers, they propose increasing the line gradually and will have several grades which they are confident will be considered equal if not better than others for the money.

MONEY IN TRIFLES.

They Looked to be of Small Consequence, but They Have Made Fortunes for Those That Conceived Them.

The Patent Office records are full of trifling suggestions that have won riches for lucky thinkers. More than half of them have been hit upon by accident. Most thoughts are blanks in the lottery of the human mind, but now and then out pops a prize. Catch it on the fly and you needn't do any more work.

For example, take a little metal paper-fastener, used to keep the pages of documents or manuscripts together. Though but a trifle, it made wealth for J. W. McGill, who invented it in 1867. The rubber pencil tip was devised by a Philadelphia man, Hyman L. Lipman, in 1858. It earned $100,000 for him. It was in the same year that George A. Mitchell got a patent for the metallic shoe-tip. His application for exclusive rights covered shoe-tips of silver and all other metals, but copper was preferred. From that time on every bootmaker who sold shoes with copper toes had to pay a royalty, which enriched the originator of the idea. An immense amount of money was made by William D. Ewart out of an improved attachment for machine harvesters, called a "drive-chain."

A number of years ago an improved pattern of thumb latch was produced by Philos, Eli and John A. Blake, of New Haven. Thirty thousand were sold during the first year and the brothers reaped a small fortune. It is reckoned that $1,500,000 has been made out of the simple device of metal plates for protecting the heels and soles of shoes and boots. No less than 143,000,000 of them were manufactured as far back as 1887. The notion of utilizing the feathers of chickens, turkeys, geese and other domestic fowls, as a substitute for whalebone in women's corsets, has been worth more than a fairly productive silver mine to its inventor. The quills are woven into strips of what is called "feather-bone." A man named Canfield first conceived the idea of making arm-pit dress shields seamless, with a sheet of cloth-covered rubber. It brought him an income of many thousands a year.

A Mr. Heaton, who hit upon the notion of a metal fastening for buttons, doing away with sewing got a fortune by it. A wooden screw proved a mint for Thomas J. Sloan in 1846. The man who invented wooden pegs for shoes was B. F. Sturtevant. He liver near Boston and went crazy later on. The barb wire fence after a fortune spent in litigation was worth more than $1,000,000 in royalties to its originator.

Formerly many eggs got broken on their way to market by rail. A countryman conceived the plan of packing them in trays of pasteboard, with a separate compartment in which each egg might stand upright. The happy thought was worth a fortune, and such trays are now universally used. An ingenious Chinaman of San Francisco named Cheang-Quan-Wo made quite a pile of money out of a gusset for reinforcing the pockets of overalls. A miner was equally lucky with an eyelet to be sewn at the mouth of the coat or trousers pocket, so as to resist the strain caused by carrying heavy tools or pieces of ore.

There was a fortune in the adoption of the inverted glass bell hung over a gas-jet to prevent the ceiling from being blackened. Big money has been made out of a pen for shading in different colors and a "darning weaver" for repairing stockings has likewise been immensely profitable. The ball-and-socket glove-fastener was patented in this country by a Frenchman named Raymond, whose idea has proven golden in results. Rogers got an independence for life out of his screw wire-nail. A common needle-threader has brought an income of $10,000 a year to its inventor. Patents for gold, silver and copper tinsel yarns for upholstery have fetched a profit of $375,000. A peculiar crook in the wire of a patented hook-and-eye has produced hundreds of dollars a

Digitized by Google

day. The roller-skate earned a cool million for the person who first caught the idea as it floated in his brain and put it into tangible shape.

A self-made millionaire was quoted a while ago as saying that one of the best ways for a young man to make money quickly was to rack his brains until he found something the public wanted, and to supply it. Common sense may be more useful to the inventor than a mechanical education. In using bath-bricks for cleaning knives, housewives found that the most troublesome part of the job was scraping the powder from the brick. One day it occurred to somebody to sell the brick ready powdered in neat packages, and he got a fortune by it. Everybody knows how troublesome it is to pick coins off a smooth counter. A way to get over this suggested itself to a thoughtful person, who promptly devised a rubber mat, with rubber bristles standing up all over it. From this the coins can be picked up as easily as if they stood on edge. Henceforth this thoughtful person will not be compelled to toil for his livelihood.

Few inventions pay better than patented toys. The "return ball" with a rubber string so often referred to earned an income of $50,000 a year for the individual who struck the notion. Two playthings that go by clockwork—the walking alligator and the "dancing nigger"—have each won a large fortune. The "Pigs in Clover" were worth thousands of dollars a week while their popularity lasted. Those odd little fireworks called "Pharoah's Serpents," which excited attention as a novelty some years ago, put $50,000 into the pocket of their originator. The idea was suggested by certain chemical experiments. That ingenious plaything known as the "Wheel of Life" is supposed to have netted $100,000. The familiar "Chameleon Top," which gave such pretty play room lessons in the composition of colors, was another very profitable toy.

Formerly inventions were nearly always made hap-hazard. People hit upon them accidentally. Now the discovery of new ideas in mechanics is a profession. The inventor is a skilled man, employed by a firm of manufacturers with the understanding that all his inventions shall belong to them. The Westinghouse Company, among others, for example, used to pick up trained electricians all over the world, set them to work, and give them every convenience for producing new industrial applications of electricity. These salaried inventors are excellently paid. Electricity is the great field for invention, even now.

The patented devices utilized in shoe-making are more numerous and more valuable than those employed in any other industry or art. This country turns out 1,000,000 sewing machines every year, and these do the work of 12,000,000 women. Mr. Platt, speaking in the United States Senate, said two-thirds of the wealth of the United States in the last century was due to patented inventions. Few known fortunes at the time exceeded that of Cyrus McCormick, inventor of the machine harvester, who died worth $20,000,000.

✤

On the strength of a statement in the *Railway Review* it is safe to say that cast iron weighs 444 pounds to the cubic foot, and a one inch square bar will sustain a weight of 16,500 pounds; bronze, weight 525 pounds, tenacity 36,000; wrought iron, weight 480, tenacity 50,000; hard "struck" steel, weight 490, tenacity 78,000; aluminum, weight 168, tenacity 26,000. We are accustomed to think of metals as being stronger than wood, and so they are, generally speaking, if only pieces of the same size be tested. But when equal weights of the two materials are compared it is then found that several varieties of wood are stronger than ordinary steel. A bar of pine just as heavy as a bar of steel an inch square will hold up 125,000 pounds; the best ash 175,000 pounds and some hemlock 200,000 pounds. Wood is bulky. It occupies ten or twelve times the space of steel. The best steel castings made for the United States navy have a tenacity of 65,000 to 75,000 pounds to the square inch. By solidifying such castings under great pressure a tensile strength of 80,000 to 150,000 pounds may be obtained.

NINTH ANNUAL CONVENTION OF THE NATIONAL HARDWARE ASSOCIATION.

The following is the complete programme as arranged for this convention:—

PROGRAM

———oOo———

NINTH ANNUAL CONVENTION
NATIONAL HARDWARE ASSOCIATION
ATLANTIC CITY
NOVEMBER 18th, 19th, 20th, 1903.

———oOo———

Wednesday, 10 A. M.

Open Session—Manufacturers, Members of the Press and Ladies are invited to be present.
Singing—"My Country 'tis of Thee."
Opening Remarks—Mr. R. A. Kirk, President.
Prayer—Reverend John R. Davies, D.D., Bethlehem Presbyterian Church, Philadelphia.
Address of Welcome—Hon. Franklin L. Stoy, Mayor of Atlantic City.
Introduction of Officers—Canadian Wholesale Hardware Association.
Roll Call.
President's Annual Address.
Secretary-Treasurer's Report.
Collocution—"Jobbers' Association as Viewed From an Outside Standpoint." Chas. F. Smith, President Landers, Frary & Clark, New Britain. W. R. Walkley, of Peck, Stow and Wilcox Co., New York. J. C. Birge, of St. Louis Shovel Company, St. Louis, and others.

Wednesday, 2.30 P. M.

Executive Session.
Report of Executive Committee.
Report of Membership Committee.
Report of Transportation Committee.
Report of Grievance Committee.
Report of Press Committee.
Report of Metal Committee.
Report of Heavy Hardware Committee.
Report of Entertainment Committee.
Miscellaneous Business.
Meeting of Those Interested Especially in Heavy Hardware, 5.30 P. M.
8.30 P. M., Smoker—Tendered by Mr. Charles R. Meyers, Proprietor Hotel Rudolf. Talent through courtesy of Hardware Merchants' and Manufacturers' Association of Philadelphia.

Thursday, 10 A. M.

Executive Session.
Consideration Committee Reports.
Miscellaneous Business.
Adjournment.

Thursday, 2.30 P. M.

Members of National Hardware Association are invited to attend meeting of American Hardware Manufacturers' Association, subject of which will be "Should Hardware Manufacturers Sell to Other Than Legitimate Jobbers?"
8.00 P. M., Concert—Ringgold Band, of Reading, Pa.
10.30 P. M., Reception and Dance.

Services of the Ringgold Band, of Reading, Pa., during the Convention are through the courtesy of the Reading Hardware Co.

Friday, 10 A. M.

Executive Session.
Discussion of Special Committee Reports.
Election of Officers.
Miscellaneous Business.

Friday, 2.30 P. M.

Executive Session.
Selection of Seat for Next Convention.
Miscellaneous Business.
4.00 P. M. Doors Will be Opened.
Installation of Officers Will Occur in Open Session.
8.00 P. M., Banquet—Tendered by American Hardware Manufacturers' Association.

Digitized by Google

AMERICAN HARDWARE MANUFACTURERS' ASSOCIATION.

The programme which has been arranged by the officials of the American Hardware Manufacturers' Association is as follows:

Wednesday Morning.

Opening Session of the National Hardware Association; (Members of the "A. H. M. A." especially invited to attend.)

Wednesday Afternoon.

Opening Session of the A. H. M. A.—Open to all manufacturers.

President's Address.

Reports of Officers and Committees.

Announcement of the Nominating Committee.

"Work of the Postal Progress Association," by James L. Cowles, secretary of the New York Postal Progress League.

Wednesday Evening.

A "smoker" given by the Hotel Rudolf, complimentary to the convention. Entertainment during the smoker will be furnished by the Hardware Merchants' and Manufacturers' Association of Philadelphia.

Thursday Morning.

Executive Session (strictly executive and open to members only.)

"What Are We Here For?" by Wm. M. Pratt, Greenfield, Mass.

"Transportation," by D. H. Goodell, Antrim, N. H.

"Packing Small Orders For Direct Shipment—Should An Extra Charge Be Made?" Edwin A. Walton, Cleveland, O.

General discussion of these subjects by the members.

Thursday Afternoon.

Executive session, to which members of the National Hardware Association are especially invited.

Subject, "Should Hardware Manufacturers Sell to Other than Legitimate Hardware Jobbers?" opened by an address by W. S. Wright, of the Wright & Wilhelmy Co., Omaha, Neb., who will present the jobbers' views in the matter.

Thursday Evening.

A musicale at the Hotel Rudolf.

Friday Morning.

Executive session.

Election of Officers.

Miscellaneous Business.

Friday Afternoon.

Open meeting of the National Hardware Association for installation of the newly elected officers. Members of American Hardware Manufacturers' Association will attend.

Friday Evening.

A banquet given by the A. H. M. A. complimentary to the visiting jobbers.

Secretary F. D. Mitchell, whose official address is 482 Bourse Building, Philadelphia, will have his headquarters during the proceedings of the convention at Hotel Rudolf, Rooms E and P.

Secretary Mitchell, in a recent letter, makes the following statement anent the prospects of the convention being the most successful they have yet accomplished:

> "The requests already received for reservation of accommodations at the Rudolf assures the largest attendance of both manufacturers and jobbers—and ladies—of any convention in the history of either association; it will be noticed that the days are wholly given over to *business* and the evenings to high-class entertainment. Efforts are making to secure some very prominent speakers for the banquet, and a very profitable, enjoyable and enthusiastic meeting is assured for all whose membership entitles them to *hear* the discussions.
>
> "A printed index will be distributed, corresponding with the numbered buttons furnished all members of both associations who have signified their intention of attending the convention. While this is primarily designed for 'identification purposes' for those who may be attending our meetings for the first time, this little booklet will prove valuable in many ways after the return from the convention—to refresh the memory on subject of conversation during the occasion, to recall addresses of other than principals, to record distribution of souvenirs and develop omissions, to indicate attendance at roll call, and a convenient 'vest-pocket' indexed memorandum book in which to jot down brief notices of matters to be taken up after return from the meeting."

HARDWARE PATENTS.

The following list of Patents, Trade Marks and Designs of interest to the Hardware trade are furnished by Davis & Davis, Solicitor of American and Foreign Patents, Washington, D. C., and St. Paul Building, New York City.

PATENTS EXPIRED OCT. 19, 1903.

350,935. WRENCH, J. G. Leslie, Oregon, Ill.

350,966. SAD IRON CLEANER, Mary H. Barnes, Binghamton, N. Y.

350,978. BOSOM BOARD, J. F. Gregson, Wellington, Kans.

350,991. HAIR CLIPPING MACHINE, J. K. Priest, Nashua, N. H.

351,039. COMBINED HAMMER AND PLANER, C. Brent and A. Lang, Mount Vernon, Ohio.

351,098. DAUBER FOR BLACKING BRUSHES, M. M. Desau, South Framingham, Mass.

351,151. VISE, R. Beachman, Lyons, N. Y.

351,158. DOOR CHECK, I. Brechner, Waterloo, Iowa.

PATENTS EXPIRED OCT. 20, 1903.

741,673. DOOR CHECK AND FASTENER, A. Kalb and A. A. R. Berger, New York, N. Y.

741,674. COMBINED DOOR CHECK AND LOCK, A. Kalb and A. A. R. Berger, New York, N. Y.

741,709. FINGER NAIL TRIMMER, J. Petrelli, New Haven, Conn.

741,737. TROCH, R. Thayer, Philadelphia, Pa.

741,872. STEP LADDER, J. A. Ashley, Yuba City, Cal.

741,990. PULLEY FOR METALLIC WINDOW FRAMES, W. D. Watson, Chicago, Ill.

PATENTS EXPIRED OCT. 26, 1903.

351,418. FURNITURE CASTER, V. A. Whitney, Waltham, Mass.

351,423. DUST PAN, T. D. Brown, Oakland, Cal.

351,424. MOTH & DISINFECTANT PAPER, W. H. H. Childs, New York, N. Y.

351,457. DOOR SPRING, J. McDonald and J. P. Courtney, Brooklyn, N. Y.

351,463. FLAG & OTHER POLES, ETC., W. R. Pitt, Brooklyn, N. Y.

351,469. SPRING HINGE, A. Schweinfurt, Philadelphia, Pa.

351,523. FISHING FLOAT AND CONNECTION THEREFOR, E. F. Pflueger, Akron, Ohio.

PATENTS ISSUED OCT. 27, 1903.

742,213. FASTENER FOR TOOL HANDLES, J. F. McCullum, New York, N. Y.

742,218. CASTER & SOCKET, B. H. Noelting, Nebraska City, Nebr.

742,371. EAVES TROUGH HANGER, H. E. Adams and H. E. Mulvey, Ashtabula Harbor, Ohio.

742,418. CAN OPENER, R. O. Hammond, Buffalo, N. Y.

742,692. SAFETY GUARD FOR RAZORS, A. A. Lux, St. Paul, Minn.

PATENTS EXPIRED NOV. 2, 1903.

351,751. COMBINED SCREW HOLDER AND DRIVER, W. E. Douglas, Columbia City, Ind.

351,777. BROOM SHIELD, S. Kellogg, Buffalo, N. Y.

351,787 POCKET KNIFE, G. W. Miller, Meriden, Conn.

351,791. LAWN MOWER, C. H. Paxson, Springfield, Ohio.

351,936. PIVOTAL SUPPORT FOR SASHES, L. Pfingst, Pullman, Ill.

PATENTS ISSUED NOV. 3, 1903.

742,859. DUST PAN, P. H. Gross and A. Peterson, Minneapolis, Minn.

742,876. LOCK FOR DOUBLE DOORS, J. E. Keverline, Coalhill. Pa.

742,002. RAPID FIRE PISTOL, W. B. Knoble, Tacoma, Wash.

743,007. SAFETY GAS BURNER, A. L. Lovejoy, Lowell, Mass.

743,183. TACK PULLER, W. C. Miller, Pittsburg, Pa.

743,318. NAIL PULLER, E. H. Norris, Cedar Rapids, Iowa.

INDIA OILSTONES

India Oilstones are as nearly perfect as an Oilstone can be.

They are of uniform grain throughout assuring an even working surface at all times.

They are manufactured in coarse, medium and fine grades; all shapes and sizes, which adapts them to every class of work.

They cut faster and wear longer than any other oilstone on the market.

India Oilstones are sold by leading tool dealers the world over.

Manufactured by

Norton Emery Wheel Co.

Please Notice—We have a complete line of Arkansas, Washita, Queer Creek and Hindostan Oilstones; also Scythe Stones, Razor Hones, Knife Sharpeners, etc. You can cover your complete requirements in the sharpening stone line with one order placed with us.

Sole Selling Agents | INDIA FOR OILSTONES.

THE BLUE BOOK.

The "Iron and Hardware Mercantile Agency," 320 Broadway, New York and 157 Federal Street, Boston, Mass., has just issued its "Blue Book" which is a Reference Book of Credits, confined exclusively to the following lines in the Metal Trades, viz: Hardware, Iron, Metals, Machinery, Foundries, Plumbers, Steam and Hot Water Heating, Blacksmiths, Wagon and Carriage Makers, Agricultural Implements, Sporting Goods, Stoves, Tin, House Furnishing Goods and Mill Supplies who buy direct from the trade. This "Blue Book" is published in March and September of each year and is the most complete and reliable Reference Book of Credits for the above mentioned lines of trade that time, a vast expenditure of money—coupled with the united efforts of a large force of experienced Agency men, can make it. It contains about 400,000 names, conservatively rated as to capital and shows how dealers pay their obligations, whether prompt, medium, slow, or "Sell only for cash." The "Blue Book" is issued in a convenient and condensed form, omitting 1,000,000 useless names in outside lines with which the trade have no dealings whatever. For years the Iron and Hardware Mercantile Agency have been regarded as the credit specialists for the Hardware, Iron and Metal Trades, believing that to specialize these analogous lines of business enumerated above, is to concentrate the necessary information; thus making the office records full, complete and up-to-date, concerning every firm in every branch of the metal industries. All their efforts are devoted exclusively to reporting on the availability for credit of this one branch of trade. Their written reports are of a most thorough and exhaustive character, containing not only the class of information usually supplied by the ordinary agency reports, but in addition they give on request the actual business experience of other creditors with the party you wish to know about; the largest amount of credit they have extended at any one time; the number of years dealt with; their record for paying obligations, and much other valuable information which the creditor should have, if he does a safe and conservative business.

SUCCESSFUL PAVING METHODS.

The Warren Brothers Co., Postal Telegraph Building, New York, and 93 Federal Street, Boston, are distributing at the present time an interesting pamphlet of 16 closely printed pages under the above title, devoted to the exploitation of the Bitulithic Pavement and its licensed companies engaged in its distribution and successful maintainance. This extremely convincing pamphlet is a reprint from the Municipal Engineering Magazine of August, 1903, published at Indianapolis, Ind. It forms a complete history of the pavement referred to, including the various patents obtained in connection with it, all of which makes information of the most readable character for everyone interested in the extension and application of an improved pavement. The pamphlet which graphically describes the process of manufacture, the methods of application and other interesting particulars, presents portraits of those composing the company who manufacture it, and the heads of departments and managers in the different States, showing how universally and extensively the Bitulithic Pavement has been introduced and extended over so large an area. Pictures showing plants in operation, and process of laying the pavement are also given, making it altogether an excellent book to request in order to keep posted regarding improvements in municipal engineering of so much importance. The rapid development of the company's business makes it advisable they should double their present capital of $500,000. Preferred bonds and stocks are offered to investors at par, for cash, with a bonus in common stock. Prospectus regarding this with full particulars will be furnished anyone interested, on application to the company.

REVIEW OF THE MARKETS.

WIRE NAILS. Business is improving at the mills and the trade is freely making specifications on contracts already booked, the demand generally being an active one. The market is firmly held and may be regarded as a satisfactory one. Quotations are as follows: f.o.b. Pittsburgh, 60 days, or 2 per cent. discount for cash in 10 days:

Jobbers, carload lots	$2.00
Retailers, carload lots	2.05
Retailers, less than carload lots	2.15

New York. The local market presents a steady demand although not especially large in volume. Quotations are as follows:

Single carloads	$2.20
Small lots from store	$2.25 to $2.30

CUT NAILS. The Cut Nail Association at its monthly meeting on October 29th decided to make a cut in the price of 25 cents a keg to take effect November 1st. The size of the cut naturally surprised the trade, used as it was to smaller concessions, but as some irregularities were observable of late in quotations, the manufacturers believed that a radical change in price would tend to make the market a stable one for some time. The new price affects steel and iron nails in the Western territory, iron nails still being held at the same advance as heretofore over the price of steel nails. Quotations are as follows:

In carload lots	$1.90 base
Less than carload lots	$1.95

f.o.b. Pittsburgh, plus freight in Tube Rate Book to point of destination; terms, 60 days, less 2 per cent. off in 10 days.

New York. By the recent reduction in prices, quotations in the local market have been changed as follows:

Carloads on dock	$2.04½
Less than carloads on dock	2.12½
Small lots from store	2.20

BARB WIRE. There is still a fair trade noticeable in this staple line; frequent purchases and quantities not especially large being the rule. Prices, however, keep up to a satisfactory maintainance, with no signs of weakness manifest. The mills, however, are kept fully employed, the demand being sufficiently steady to warrant a continuance. Quotations are as follows: f.o.b. Pittsburgh, 60 days, or 2 per cent. discount for cash in 10 days:

	Painted.	Galv.
Jobbers, carload lots	$2.30	$2.60
Retailers, carload lots	2.35	2.65
Retailers, less than carload lots	2.45	2.75

SMOOTH FENCE WIRE. With the market in a steady condition, and the demand up to the usual requirements for the period of the season, the demand is a very fair one. The reports from the mills indicate a good line of business being in progress, with quotations as follows: f.o.b. Pittsburgh, terms 60 days, or 2 per cent. discount for cash in 10 days:

Jobbers, carloads	$1.90
Retailers, carloads	1.95
Less than carloads	2.05

The above prices are for base numbers, 6 to 9. The other numbers of Plain and Galvanized Wire take the usual advances, as follows:

		Plain.	Galv.
6 to 9		Base.	$0.30
10	Advance over base	$0.10	.30
11	" " "	.10	.30
12 and 12½	" " "	.15	.30
13	" " "	.25	.30
14	" " "	.35	.30
15	" " "	.45	.60
16	" " "	.55	.60
17	" " "	.70	1.00

SHOVELS AND SPADES The dissolution of the Shovel Combination having been announced, as noted in another column of this paper, there is naturally some apprehension in the trade as to what will constitute the new range in prices governing important competing grades of goods. The market has been held fairly steady for so long a time under the rebate system, the trade naturally looks forward to a lower range of quotations, aggressively adopted with the knowledge of the greatly increasing facilities of outside makers to capture the jobbing trade. The market is likely to be somewhat irregular for some time.

CARRIAGE BOLTS, LAG SCREWS AND MACHINE BOLTS. The lower range of prices which have been prevailing in several lines of goods in which the new prices on raw material would naturally affect, will probably exert an influence on the market for heavy grades of Hardware for some time; carriage bolts, lag screws and machine bolts are apt to feel the retrograde movement in prices early, as they are amenable to the regular demands of successful trade, and subject to all market fluctuations. With the wish for a more active movement in harmony with the regular demand for analogous goods, prices have been made more attractive to good buyers with satisfactory requisitions.

COPPER. Some of the manufactured articles in the Copper market show recessions in price in such as Sheets, Copper Bottoms, Pits and Flats, and Soldering Coppers, as indicated by the new prices adopted by the various manufacturers of these products October 22. The base price for Sheet Copper is now 18 cents, instead of 20 cents as previously. Copper Bottoms, Pits and Flats have been reduced 2 cents per pound on the base sizes, 14 ounces to lighter than 10 ounces. Soldering Coppers are now sold at a reduction of 1 cent per pound.

CORDAGE. The demand for Cordage holds up very well, the market being a firm one. The following quotations represent the market:

Pure Manila, 7-16 inch and larger	12
⅜ inch	12½
¼ inch and 5-16	13
Pure Sisal, 7-16 inch and larger	9½
No. 2 Sisal, 7-16 inch and larger	8½
⅜ inch	9
¼ inch and 5-16 inch	9½
Lath Yarn, Medium and Coarse	8½
Jute Rope, No. 1	6½
No. 2	6

LINSEED OIL. Under date of October 30th the following quotations on "City" Raw Oil are those announced by the Dean Linseed Oil Co.:

In lots of less than 5 barrels...38 cents per gallon.
In lots of 5 barrels or more....37 cents per gallon.

The "American" brand for respective quantites. 2 cents per gallon less.

The five barrel price applies only to deliveries of that quantity at one time.

Boiled Linseed Oil, 2 cents per gallon higher than Raw.
Calcutta Oil .....65 cents per gallon.

THE PITTSBURGH TRADE.

The jobbing trade holds up quite well considering the large proportion of the manufacturing interests that are shut down. Recent indications point to a renewal of the damand for iron and steel in the near future, so that we do not look for the severe depression of the past few months to last much longer. Certainly the abundant crops of the West and South selling at good prices should put the consumers in condition to buy our products and we believe they will. October gave us beautiful Fall weather, and merchants would welcome now something of a more wintry order, as a stimulus to the sale of cold weather goods. Guns and ammunition are in good demand, as also are gas stoves and ranges.

LOGAN-GREGG HARDWARE CO.

Digitized by Google

THE PHILADELPHIA TRADE.

The delightful Indian Summer through which we are now passing is keeping alive an active demand for goods wanted for outdoor work, and while Winter goods, such as skates, sleds, and sleigh bells, are temporarily put aside, there is a good call for general Hardware and trade is keeping up in very satisfactory volume. Prices remain without important changes, for while two or three lines of goods near the raw material have weakened somewhat, these have been offset by advances in wire cloth, galvanized cellar window wire, window screens, lawn mowers, ice cream freezers, and some other lines, so that decisive changes are comparatively few, and some manufacturers prophesy higher prices in the near future. In such a market it seems unwise to restrict buying to such an extent that trade is lost thereby, and though there is small incentive to speculative buying, still it would seem good business policy to keep a stock of goods sufficient to meet all reasonable demands. It is already evident that prices on many Spring lines will start out at higher figures as shown in the case of such important items as wire nails, lawn mowers and ice cream freezers, and whether our present era of good trade is to continue depends largely upon the nature of relations between capital and labor.

Biddle Hardware Co.

THE ST. PAUL TRADE.

With the near approach of Winter we already look forward to what will be in store for us next year. We have passed through a most undesirable Fall, the weather being very bad for harvesting and threshing and the crop results are questionable. We do know that the result will not be up to average; our trade, particularly in the newly opened territory, will be light, while in the older settlements it will not be good, so altogether we look for light trade during the Winter and Spring to come. Then the question comes up as to what will be done with prices after Jan. 1st. We feel that they cannot be lighter, and that business will have to be good to hold them where they are for next Spring.

Hackett, Walther, Gates Hardware Co.

THE CLEVELAND TRADE.

Elections, labor troubles, added to the Wall Street slump, have caused a serious decline in pig iron, and the retrenchment by railroads is likely to cause a large surplus which would seriously cripple general business under normal conditions. When these things are considered trade is surprisingly good. Many lines of goods now being sold for Spring shipments are higher in price than they were last season, and retail dealers are entering orders for them. Goods that are near raw material are lower, but trade in them is fairly good. The general impression is that trade will be quiet, but this feeling does not extend to consumers, as they are buying goods freely and compelling retailers to buy them. This feeling, however, is likely to extend unless a reaction comes in the reduction of price on raw material and some of the idle mills resume. An extended depression does not seem possible, but what seems impossible sometimes happens. With both candidates for governor and United States senator residing here we are in the political storm center.

The testimony in the ship building company case shows that business is not based on the beatitudes, even among the captains of industry, and that benevolence in church building is no assurance of integrity. Deliberate lying to rob people who buy stocks on their confidence in the officers of the company, should be characterized not as grafting, but by some name that would make it infamous. Nothing has so destroyed confidence as such colossal robbery through false representation, and nothing can restore confidence but the united effort of all who believe in morality in business, to bring the offenders under subjection to the extreme penalty of the law. It should be the business of all honorable men to make it impossible for such scoundrels to live in decent society. They have caused a national calamity by undermining faith in the integrity in our foremost business men; it would be hard to conceive a greater crime. The New York *Commercial* says: "Red Riley, a well known confidence man, was yesterday sent to prison for one year and fined five hundred dollars for swindling a man out of five dollars." Are the wholesale swindlers exempt because of their large bank accounts? It has been supposed that integrity was essential to financial leadership, and that the beatitudes have a stronger hold on that class, but late revelations undeceive the public and a sudden loss of confidence is shown in the stock market.

The Lockwood-Taylor Hardware Co.

THE SAGINAW TRADE.

The last three weeks the weather has been very fine and unusually warm for this season of the year. In consequence, the corn has matured, and a good crop harvested. On account of the bright sunshine, the sugar beets are running more to sugar than was anticipated earlier in the season, on account of the continuous rains. At one time, there was so much water, it was impossible for teams to get into the fields, but that difficulty has passed, and the roads are lined with teams taking sugar beets to the factories. The sugar factories in this section are all running. The cabbage crop has been very large, and brings good prices, and cabbages are being shipped out of here in very large quantities, by the carload, every day. The potato crop is very poor, on account of the rainy and backward season. The coal companies are running to their full capacity, and the salt companies are making the usual amount of salt. The lumbering tool factory, plate glass factory and others are running full time. Trade is fair, but collections are not as good as they were a year ago. On the whole, the crops in this section are better than they were last year.

Morley Brothers.

THE DAVENPORT TRADE.

The weather for October has been well nigh perfect, which has been exceedingly favorable for harvesting and cribbing corn. In this neck of the woods corn has entirely escaped injury by frost and will be at least a fair crop. These encouraging conditions have stimulated trade, and the last half of the month just passed has been very satisfactory, and has also improved collections, which we report good. Politics has interfered with business less than usual, as the State of Iowa politically is so one-sided that there is and has been no doubt about the result of the election tomorrow of the State ticket. From all we can learn there will be a full and enthusiastic delegation from the West at Atlantic City on the 18th, 19th and 20th of this month to attend the National Hardware Convention; everybody will be there intending to do their very best, and we will be there with the rest, expecting to have a good time and to be well repaid morally, socially and financially for the time and money spent on the trip.

Sickels, Preston & Nutting Co.

THE COLUMBUS TRADE.

The weather is more like September than November. It is certainly ideal for farmers to get their work all done in shipshape order for Winter, and what glorious weather for roaming around in the country. Of course, you will swallow a peck or so of dust. We need rain badly to fill up the wells and streams, but no doubt it will come in good time. Dry Goods, clothing and shoe dealers are complaining as people don't need anything in the way of Winter goods yet. Hardware trade is good and collections fair. As predicted, Uncle Mark knew his business, and Ohio has given the largest Republican majority for years. Now we can all settle down to business and not be distracted by brass bands, speeches, hand shakes and cheap cigars. We can now buy our own stogies and not feel obliged to vote for the man who is just right in his own estimation. If we could only jump over Presidential year, what a good thing it would be for everybody.

The Smith Bros. Hardware Co.

J. H. Smith.

THE CINCINNATI TRADE.

Trade conditions remain up to this writing quite the same as last month, much more satisfactory than were expected. October was the banner month of the Fall season for many years, being equal to the best Spring month of last year. Mr. Belmer, of H. Belmer & Co., was very much elated as to the November business and said in looking over the firm's books

Digitized by Google

NICHOLSON FILE COMPANY

MANUFACTURERS OF
FILES AND RASPS
NICHOLSON, KEARNEY & FOOT, ARCADE, AMERICAN, GREAT WESTERN, McCLELLAN, EAGLE, J. B. SMITH, "X. F.", GOLD MEDAL.

fearing a reaction to so long a good business, found that October was fair and above any month's business they had had. Mr. Johnson, of the Johnson Bros. Hardware Co., stated that while he did not like to go into print as an authority, that he believed the Fall trade was very satisfactory all around, he had no complaint to make regarding his own business. Mr. Berger, of the Kruse Hardware Company, said his firm had "no kick coming." October was even better than the best month in Spring trade. The Kruse Hardware Co. is the only Hardware jobbing house now on Pearl Street, and with the Johnson Bros. Hardware Co. on Second Street, are the only jobbers now in the bottoms and both will remain in their respective localities until the railroads force them to get out, which will be in the near future. The Kruse-Bahlmann Hardware Co. is in the new quarters on Sixth and Pioneer Streets, off Broadway, the offices all being on the ground floor on Pioneer Street, making the most commodious and best-lighted suite of offices in the city. The railroad switch enters the building from Sixth Street and holds a half-dozen freight cars. Pickerings offer this week the No. O Universal Food Chopper at 59 cents, this sale inaugurates their special weekly sales. Wm. Tait, recently in the Hardware business in Minnesota, has opened a general Hardware store at No. 5 East Court Street. Mr. Babke, formerly with the J. L. Wayne, Jr., Hardware store, acting as Mr. Tait's best man.

THE OMAHA TRADE.

While the volume of trade maintains the usual average for this season of the year it is a little disappointing in respect to season goods. The unusually mild weather prevailing for some weeks past has eliminated almost entirely the movement on cold weather goods such as stove boards, elbows, pipe, hods, etc. In view of the fact that there is no demand for these lines it is a little surprising that the volume should keep up to the extent it has done, but the conditions prevailing throughout the territory tributary to this market are generally good. While some bad spots are reported, generally speaking the crops are up to the average and in many cases the best that have been harvested for years. Farmers generally are well satisfied with the prices and the majority are in position to pay all their bills, buy what they need and have money left to bank. No complaint whatever is heard in regard to either sales or collections and conditions point to a continuance of present favorable and satisfactory conditions for some time to come.

WRIGHT & WILHELMY CO.

♦

At Raleigh, N. C., on Oct. 31st Walter Hoff, of the Hazard Powder Co., won high average and made a run of 99 straight with Peters Ideal shells loaded with Hazard Powder.

On Oct. 22d at Rising Sun, Md., Lin Worthington won high amateur average. He used Peters Ideal factory loaded shells.

TRADE NOTES IN TRENTON, CAMDEN, BALTIMORE AND WASHINGTON, D. C.

(By our Traveling Correspondent).

The Scott Hardware Co., of Trenton, last week were showing a very complete line of oil stoves, and one of the large windows of the store was used to display the line. In the daily papers oil stoves were being well advertised and the Scott Hardware Co. consequently were making many sales of these goods, at a season of the year when the line is generally somewhat neglected and considered almost out of season. The success of the Scott Hardware Co. simply demonstrates what a little energy and enterprise will do in the Hardware trade.

Another of Trenton's largest Hardware firms is A. C. Crook & Son, who make a specialty of builders' and shelf Hardware, and carry a large and well assorted stock.

An attractive store is that of F. S. Katzenbach & Co., who cater to the contractors and larger builders trade. This firm reported business in a good condition, which was due to the fact that there had been all Summer quite a large amount of new building taking place.

Way back in the sixties A. C. Hammer started in business by opening a small Hardware store and general repair shop in Trenton. From the very start the business was a success, and by many years of close attention Mr. Hammer has succeeded in building up a fine retail trade. "If you get it at Hammer's it's all right," is an expression known among the users of Hardware in Trenton. When asked how business of 1903 compared with that of former years, Mr. Hammer said: "The only drawbacks to trade to-day are labor troubles. If it were not for these constant strikes this would have been our biggest year, but as it is we have been very busy, and I think the outlook is good." The opinion of a merchant who has been through all the panics and business troubles since 1869 as has A. C. Hammer, is of interest and value to all the trade.

B. Satterthwaite, who in 1901 succeeded the old firm of Tomlinson & Satterthwaite. In speaking of trade conditions J. B. Satterthwaite said: "Here in Trenton we do considerable business with the farmers. We ourselves have a large farmers trade—and this end of our business has never been better the past Spring and Summer—and we are doing a strictly cash business." Asked if he found the "No Trust" strictly cash basis of doing business practical and profitable, Mr. Satterthwaite further said: "Two years ago we put up that big sign "No Trust," and in only a few cases have found that we lost any customers, but we have no dead accounts on our books—in fact, we have no books at all—buying for cash and selling only for cash. Our money is in the bank and in our stock. It's the only way and I believe it can be done by any merchant and especially in pick-up Hardware trade."

Up on North Broad Street W. C. Everingham conducts an up-to-date Hardware store. Business was reported in a good condition with a growing demand for high-grade goods.

In all parts of New Jersey the Hardware merchant is in a

Digitized by Google

STANLEY RULE & LEVEL CO.
NEW BRITAIN, CONN., U. S. A.
Improved Carpenters' Tools.
SOLD BY ALL HARDWARE DEALERS.

prosperous condition. Elmer E. Cox, who has one of the leading stores of Camden, is no exception to the rule.

Another well stocked Camden store is that of H. E. Williams, and a very complete line of all grades of Hardware is carried. As there is no small amount of new building taking place in Camden, the demand for building materials is good.

In all parts of New Jersey the reports are that the outlook is good for Winter trade. Although the expansion of the Hardware store is not as rapid here as in some parts of the country, still most of the retailers are constantly broadening out their business.

When asked how Fall business was opening up, E. E. Eagleston, of Hubbard & Eagleston, which firm is one of the leading retailers of Hardware in Baltimore, said: "I have been connected with the Hardware business for about 25 years, and as I look back on past experience it seems to me that the outlook is exceedingly good. Our trade has grown and we will do in 1903 about twice as much business as in 1902. The only thing that stands in the way of a bigger trade here in Baltimore is trouble with building trades unions. When the carpenters will work, the masons are on a strike and then the plumbers go out, and so building of all kind is constantly being held up."

The Baltimore Hardware Co., out on W. Baltimore Street, do a large business in "pick up" trade. A few weeks ago this concern were showing a very attractive window display of tools and cutlery, which lines are well stocked.

Another of Baltimore's progressive Hardware concerns is the firm of Wm. H. Cole & Sons. Besides catering for a high-class retail trade, Cole & Sons do some jobbing business.

A store with good arrangement is that of F. H. Davidson. Mr. Davidson is one of the oldest dealers in Baltimore, and has built up a good trade.

Henry Keidel & Co., of Baltimore, is an up-to-date concern and send their representatives all through the South, selling guns and gun goods and specialties in Hardware.

The store of J. B. Espey, at 1010 Penn Avenue, is one of the Washington, D. C., attractive Hardware establishments. Mr. Espey is a believer in up-to-date methods, which is shown in his method of delivering goods, using as he does one of the best delivery wagons to be seen on the streets of Washington.

R. M. Brown, up on N. 7th Street, does a large business in paints and painters' supplies, and handles some goods in the Hardware line as well as sporting goods.

One of the oldest established Hardware dealers of Washington is Wm. Wagnor, at 207 Penn Avenue. For many years Mr. Wagnor has been known as carrying the best line of cutlery and tools. Being a practical gunsmith Wm. Wagnor has built up a good trade in gun repairing as well as an extensive trade on hand-loaded shells and gun goods.

HAMMERNAIL.

EARLIEST USE OF GUNPOWDER.

A recent English writer states that gunpowder, or an explosive compound closely resembling it, has undoubtedly, been known in India and China from very early times. Many attempts have been made to ascertain when this powerful agent, the employment of which has had such an important effect in the making of history, first came into use, but the result has been more to put forward fanciful theories than to establish many facts.

The Chinese certainly advance the strongest claim to have been, if not the inventors, at least the first to make any practical use of this explosive. An officer in the suite of Lord Macartney, when he made his journey to China in 1789 as British Ambassador, who took careful notes of every singular thing he saw in that interesting country, and especially of the Great Wall, built about 221 B. C., stated that in the towers, which at intervals crowned that stupendous work, he found loop-holes, "similar to those used in Europe for the reception of the swivels of wall-pieces." These embrasures appeared to be part of the original construction of the wall, and the officer remarked that it seemed difficult from their shape to assign to them "any other purpose than that of resistance to the recoil of firearms." Hs observed, too, that the small pieces of ordnance seen in China, were generally mounted on swivels for which these loop-holes were well adapted.

The claim of the Chinese to a very early knowledge of gunpowder is also supported by a Portuguese writer at the commencement of the 17th century. ("History of the Monarchy of China by Alvarez Semedo.") He remarks: "As for their arms I say first that the use of powder is very ancient in

China, and in fireworks, herein they are excellently skillful, they spend more powder in a year, than in their armies, at this time, in five. Anciently it seemeth they used it more in war, for even to this day they are seen on the gates of the city of Nankin, on both sides of the town, great brass bombards or cannon, which, though they be but short, yet they are well made, from whence it may be concluded that they have formerly been in use. But now they know not how to make use of them, and keep them only for ostentation. They have also Dagges two palms long and musket bore. They do stock three, and sometimes four of these together and shoot them off all at once."

That gunpowder in something like its present form as distinct from the famous Greek fire was well known in some parts of Europe in the eighth century is an established fact, for the work of Marcus Græcus entitled "*Liber ignium ad comburendos hostes*"—a compilation, and consequently taken from earlier sources—contains exact directions for making powder, and even recommends that the charcoal be prepared from willow wood, which modern manufacturers find to be one of the most suitable woods for the purpose. Roger Bacan probably quoted from this work in his "*Opus Majus*," written about 1250, where he tells us how "with an instrument as large only as the human thumb, by the violence of the salt called saltpetre, so terrible a noise is made, that it is thought to exceed loud thunder, and the flash is stronger than the brightest lightning." He further speaks of this powder being well known "in all ways for making squibs and fireworks." It was to the manufacture of fireworks that the Chinese seemed to have principally applied gunpowder, for they have excelled in pyrotechnics for ages. A tube of paper or other material loaded with powder for this purpose, was therefore the forerunner of the cartridge, and must have suggested the use of metal tubes for projective purposes. The cartridge in its primitive form, that of a certain charge of powder enveloped in paper or linen, may consequently be said to have been in use almost as long as gunpowder.

About the beginning of the 12th century gunpowder began to be used in Europe for military purposes, and at the siege of Saragossa in 1118 cannons were used by the Moors, who appear to have had a very full knowledge of the power of gunpowder long before their invasion of Spain. In the Bibliotheque Nationale, at Paris, is a manuscript treatise in Arabic, dated 1249, giving recipes for making gunpowder of different degrees of force. Conde in his "History of the Arabs in Spain" states that in 1252 the Moors besieged in Niebla defended themselves by "throwing stones and darts with machines, and throwing of thunder with fire," and the same authority says that Ismail Ben Feraz, at the siege of Beda, had among his machines, "some that caused fire as of roaring thunders and lightnings resembling those of the resistless tempest." There is also other evidence that the Moors, toward the close of the 13th century, projected small bullets from tubes, some of which were attached to the end of a lance. From Spain the knowledge spread quickly and successively to Belgium, Germany, Italy, and afterward to England and France. The first recorded appearance of portable firearms in England was in 1471. The method of firing these earlier arms was very simple. In the first place they were plain iron or brass tubes closed at one end, and provided with a touch-hole to which a lighted slow-fuse was applied. In order to conveniently hold this tube (for after a few discharges the metal would become very hot) it was fastened to a piece of wood, straight at first but afterwards bent—the first movement toward the present form of stock. The first mechanism for discharging firearms, the matchlock, was invented in 1423.

LOOKING FOR A HUSBAND

"When a woman wants a husband she doesn't go looking in a club for one," said the short-haired maiden lecturer.

"Not unless she happens to be married," suggested one of the long-haired sisters in the audience.

TO SUPERSEDE EMERY

Craig Mine Crystal Corundum

CRAIG MINE CRYSTAL CORUNDUM is as uniform as the coins of the realm. It excels the irritatingly uncertain abrasives produced elsewhere, even as the coinage fresh from our modern mint excels the hand-made money of Alfred the Great. Nature made Craig Mine Crystal Corundum. It is all the same in physical qualities; a testimonial in favor of one pound testifies in favor of the whole output.

Craig Mine Crystal Corundum grains are numbered 12, 14, 16, 20, 24, 30, 36, 46, 54, 60, 70, 80, 90, 100, 120, 150, 180 and 200. Find the number that suits your work and continue ordering it.

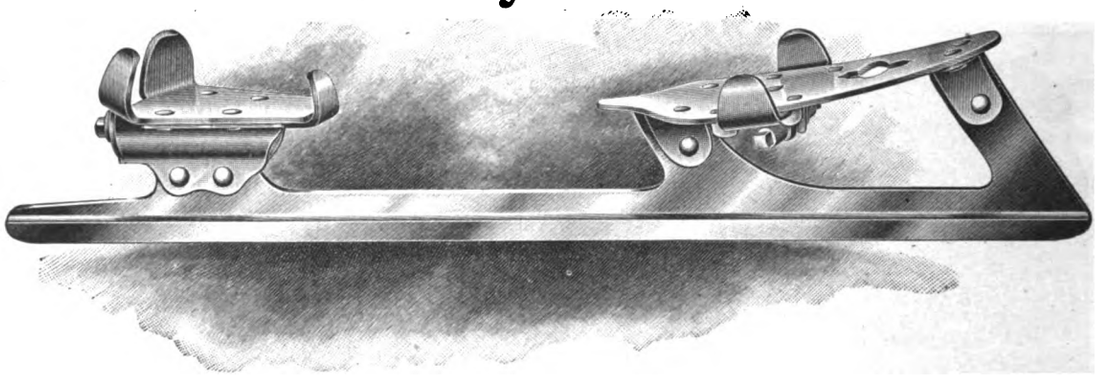
SOME BAMBOO FACTS.



Evidence bearing on the question whether Japanese bamboo can be successfully grown in the United States for commercial purposes is contained in a bulletin issued by the Agricultural Department at Washington. This bulletin is entitled, "Japanese Bamboos and Their Introduction into America," and is by David G. Fairfield. The fact is pointed out that nearly 10,000,000 bamboo fishing rods, or poles, as the small boy prefers to call them, are imported every year by the sporting goods trade, and the feasibility of growing the bamboos in this country is shown. Instances are cited where the plants have been successfully cultivated in a small way in private grounds and parks, and the possibility of growing them in this country for the market is stated for the benefit of land-owners who find the commoner crops less profitable than they have been heretofore. To show that the belief which exists that the bamboo plant will thrive only in warm countries is erroneous, it is stated that Japan is a land of bamboos and yet where these plants grow it is not so warm in Winter as it is in California. In regions where the snows are so heavy that they often break down the young stems and where the mercury falls to 15 degrees below freezing point, the largest of the Japanese species grows in large groves. For many years the gardens of France and England have been beautified by clumps of these Japanese bamboos, and even in America occasional plants can be found growing in the open air, which proves the possibility of acclimatizing these representatives of this most useful family of plants. A temperature of six degrees has not proved fatal to a large number of the hardy kinds in England. Clumps of the hardy kind may be seen occasionally in private gardens or in public parks in the South, even as far North as Washington. But owing either to the difficulty of getting the plants or a failure to understand their management these have never become popular farm plants. In California, where the Japanese and Chinese species thrive very well, there are many large specimens and even one small forest, while a number of Californians are enthusiastic bamboo fanciers. Dr. H. Tevis, of San Francisco, has probably the largest collection on the Pacific Coast, and his brother has a grove at Bakersfield, in which stems over 40 feet high are growing, while in Golden Gate Park there are several healthy groups.

From the Japanese Bureau of Forestry it has been learned that a prominent Japanese grower of bamboos estimated his profits at $20 per acre, and another man claimed to have averaged $40 per acre, while growers of the edible variety placed their profits at $90 per acre. The growth of the plant is very rapid, instances being cited by Mr. Fairchild where shoots had grown from one to three feet in a day, while plants have attained a height of 20 feet in about seven weeks.

The importation into the United States of bamboo has

"There's Safety In Numbers"——

THE SAMUEL WINSLOW SKATE MFG. CO., Worcester, Mass.

reached enormous proportions. And the demand is growing. The manufacturers of fishing rods alone require large quantities of the best material, and if it were possible to obtain this in our own country the cost of the raw material would be greatly reduced. Hence our manufacturers and dealers, as well as our farmers and nurserymen, should consider the matter from every point of view. The bulletin contains full data concerning the transplanting, cultivation and proper soil for bamboo growing, and copies may be had through the mail by addressing the United States Department of Agricultulture, at Washington.

HARDWARE DEALERS' RECORD.

Hardware dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Stores, Incorporations, Etc.

Anderson, S. C.—D. C. Brown has decided to go into the Hardware business and will open up a stock of goods. The name of the new firm will be the Brown Hardware Company.

Anita, Iowa.—The Farmers Supply Co. has been incorporated. The capital stock is $25,000, $20,000 having been subscribed. The company will succeed the Bruce & Voorhees business in Massena and the Bruce, Burkhartt & Supplee business in Anita. The officers are: president, James T. Bruce; secretary, J. D. Young; treasurer, B. D. Forshay; Peter Vorhees and Lew Boyd, vice-presidents and general salesmen. The above, with a number of prominent farmers of that section, form the board of directors.

Barada, Neb.—John and Chas. Markt will engage in the Hardware business.

Barryville, Ohio.—The new store and residence built by J. C. Gulling is now complete and Mr. Gulling is putting in a stock of general merchandise and Hardware.

Billings, Mont.—The Billings Hardware Co. has been incorporated. Capital stock, $50,000 of which $25,000 has been subscribed. The members of the board of directors are Jacob Fischer of Helena, H. T. Davis and W. A. Selvidge of Billings.

Canyon City, Texas.—Canyon City Hardware & Grain Company has been incorporated; capital stock, $10,000. Incorporated by J. L. Howell, Sr., J. L. Howell, Jr., J. I. Campbell, W. H. Hicks and T. C. Thompson all of Canyon City.

Caruthersville, Mo.—The Pefiscot Hardware & Implement Company has been incorporated. Capital stock, $15,000, one-half paid. Incorporators: Wm. A. Ward, S. P. Reynolds, Gideon Crews, A. C. Tindle, J. A. Cunningham, L. B. Powell and others.

Coffeyville, Kan.—Ray and Will Clark have aranged to put in a full line of shelf Hardware and will do business under the name of Clark Bros. The new store will be located in the Clark Building. It is planned to open up about Dec. 1. Ray Clark for the past five years has been employed by Isham & Son, and has acquired a thorough knowledge of the business.

Corning, N. Y.—A new Hardware store under the firm name of Magee & Metcalf has been opened on West Market Street.

Delevan, Ill.—George I. McFarland & Eugene McFarland will engage in the Hardware business.

Frankfort, Ky.—The Whitsell Northern Hardware Company has been incorporated. Capital stock $6,000.

Changes.

London, Ont.—James Reid & Co. have sold out their business to a new firm, composed of Alexander Purdom, Jr., and William B. Gillespie. Both have had experience, and have been connected with the wholesale house of the Hobbs Hardware Company. The new firm, which will be known as the Purdom, Gillespie Hardware Company, have taken possession and intend to merit a share of public confidence.

Monticello, Ill.—Lemten & Skelton have purchased the Coe & McMillen Hardware store. Mr. Coe goes to Ivesdale to enter the National bank.

Mt. Auburn, Ill.—White Housley has purchased the Hardware business formerly owned and conducted by Rohan & Phillips.

Muscatine, Iowa.—J. H. Lingo has sold his Hardware stock to Chris. Rayner, of River Junction, who will take possession at once.

Owatonna, Minn.—Thompson & Roell, who have until recently been interested in the Ellendale Hardware Company, have sold their interest to V. Gulbrandson and Gilbert Lunde, to Albert Lea. No change in the management of the business occurs. It simply being a transfer of stock.

Philadelphia, Mo.—Finley Tillett has purchased C. L. Johnson's Hardware store.

Reading, Pa.—Joshua Lutz and Amos W. Eberly bought the Hardware store of Isaac B. Brubaker. They will take possession on Jan. 1, 1904.

Reading, Pa.—The offices of the Consolidated Hardware Company will hereafter be located in the Colonial Trust Building.

Salina, Kan.—J. N. Schwartz & Co. have sold their retail Hardware stock to H. J. Ruhling, of Chicago, who for the past ten years has been in the employ of the Trout Hardware Co., of that city. The firm name will be the Ruhling Hardware Co.

Three Mile Bay, N. Y.—Brayton Rider, of Watertown, has purchased the Hardware stock and good will of H. D. Empie and will conduct the business.

Toledo, Ohio.—The Stollberg & Clapp Company has changed its name to the Stollberg Hardware Company. John Stollberg is president.

Toledo, Ohio.—M. W. Canfield, in business as the Canfield Hardware Company, has disposed of his stock to William Cramer and C. D. Campbell. Messrs. Campbell and Cramer were formerly engaged in the Hardware business at Wharton, O., also in the same business during the past year at North Baltimore. They have purchased the entire stock of the Canfield Hardware Company.

Alliance, Ohio.—The Allott-Kryder Hardware Company, Inc., have succeeded the firm of Allott & Kryder. Under the new firm of J. F. Kryder is president and general manager. John Foltz is vice president and Guy Allott secretary and treasurer.

Birmingham, Ala.—The Syd Smith Hardware Company, Mr. Syd Smith, president, is now installed in new quarters at No. 20 South Twentieth Street, where they will carry a full line of stoves, tinware, Hardware, sash, doors, blinds, cement, paints, oils, varnishes, mantels, tiles, grates, etc. The business will be wholesale and retail.

Congerville, Ill.—Sharp Bros.' Hardware Company has traded their stock of Hardware and farm implements and building to a land company.

Constantine, Mich.—Charles Barnard of Florence has recently purchased his brother's interest in the Hardware firm of Hutton & Barnard.

Elmira, N. Y.—Ryan Bros. of Holland, N. Y., have purchased the Hardware stock and business of J. Beals Sturdevant.

Ft. Worth, Tex.—Hugh H. Lewis & Co. have opened a branch store in the Rosen Inn Building and have put in a full line of Hardware, stoves, queensware and a first class tin shop.

Hoosick Falls, N. Y.—Nathan H. Wilkins and Leo J. Ladd have purchased the Hardware business of Warren G. Parsons, at the corner of Church and John Streets, and will conduct the same under the firm name of Ladd & Williams.

Kansas City, Mo.—M. R. Roberts, who has been in the Hardware business in the east side for the past ten years has sold his stock to the Wize Hardware Company of this city, who will consolidate it with their own stock after invoicing.

Lincoln, Ill.—John Woefel and Carl Gundlach, of this city, have purchased the Hardware business of O. M. Kiest.

Nebraska City, Neb.—Markel & Meredith, the Hardware firm, have dissolved partnership. Mr. Meredith has retired from the firm and the business will be continued by Mr. Markel.

Smithville, Mo.—John T. Williams has sold his interest in the Hardware store to John Williams, who will conduct the business alone.

Yutan, Neb.—The firm of Peters & Thomas, Hardware merchants, has sold out to Fred Hamann.

Victor, N. Y.—W. H. Townsend, of Geneva, and A. B. Munson, of Cheshire, have purchased the Frazer Hardware business.

West Liberty, Iowa.—P. R. Hordin and his brother, William, having purchased the Z. T. Condit Hardware store, and have taken possesion.

HARDWARE MANUFACTURERS' RECORD.

Hardware manufacturers over the country, are requested to contribute to this page. News of new factories or companies, changes, improvements, etc., will be gladly received, and promptly published.

New Incorporations, etc.

Augusta, Maine.—The Bay State Tool Company has been organized for the purpose of manufacturing and dealing in machinists' fine tools, with $200,000 capital stock. The officers are: President, I. L. Fairbanks, of Augusta; treasurer, J. Berry, of Augusta.

Boston, Mass.—The Atlantic Stove and Manufacturing Company has been incorporated in Massachusetts with a capital stock of $350,000.

Chicago, Ill.—Chicago Knife Works has been incorporated; capital, $3,000; manufacturing knives; incorporators: M. Doherty, E. P. Fick, Gertrude Fester.

Cleveland, Ohio.—The Rotary Engine and Tool Mfg. Co. has been incorporated Capital stock $50,000. Incorporators: S. M. Wade, G. H. Platt, G. E. Garner, F. A. Butler and H. D. Carpenter.

Cleveland, Ohio.—The Universal Hinge and Manufacturing Company has been incorporated with $20,000 capital stock, by H. L. Schneider, F. A. Richardson, W. A. Bullard, H. M. O'Malley and T. H. Penty.

Columbus, Ohio.—The Racine-Seattley Co. has been incorporated under the laws of Ohio to manufacture agricultural implements, at 410 North High Street. Ohio capital stock is as $2,000 is to $3,100,000.

Dayton, Ohio.—The Corbin Screw Corporation has been incorporated under the laws of Ohio with a capitalization of $400,000. Frank E. Westlake represents the Dayton end of the concern. It is this company that owns the screw factory adjoining the Dayton water works pumping station, and which contemplates increasing its facilities largely.

Denver, Col.—The Colorado Rubber Company has been incorporated; capital stock, $50,000; directors: Jacob Hammer, Frank A. Donahauer and Daniel B. Ellis. The company will build a plant in Denver for the manufacture of rubber goods.

Detroit, Mich.—The Rowley Scale & Supply Co. has been incorporated, with a capital stock of $10,000. The concern will manufacture scales, butchers' and grocers' supplies. The stockholders reside in Detroit, as follows: Valentine S. Ives, Thomas L. Wilson, James J. Larmeu.

Dunkirk, N. Y.—The American Air Tool Co. has been incorporated with a capital stock of $300,000. The directors are: R. J. Gross, F. W. Smith and C. J. Carney, all of Dunkirk.

Elgin, Mo.—The Western Casket Hardware Company has been incorporated; capital, $25,000; manufacturing undertakers' supplies. Incorporators: A. M. C. Todson, M. C. Parsons and W. E. Todson.

Grank Forks, N. D.—The North Dakota Manufacturing Company, with a capital stock of $100,000, has been incorporated. The incorporators are: John Henry and his two sons, James C. Henry and John A. Henry. The company will manufacture the Henry wind stacker. John Henry, the head of the new company, is the inventor of the stacker.

Grand Rapids, Mich.—The Muskegon Cutlery Company, in the old plant of the Muskegon Manufacturing Company, has already begun operations in a small way and expects to be in complete operation by December 15, as the special machinery which is now being built in New York will have then been installed. When running at full capacity the company will employ about 100 men in the manufacture of knives, forks and spoons from a composition which is a secret with the company. The company expects within a few years to enlarge to take in everything in plated ware of all kinds.

Ladoga, Ind.—George W. Anderson, of this place, has lately patented a combination lawn and garden rake. A stock company was organized and a new brick building is to be fitted up with complete machinery for turning out large quantities of the tool.

Newark, N. J.—Universal Caster and Foundry Company has been incorporated. Principal office, 118 Adams Street; to manufacture Hardware, etc.; capital, $350,000. Incorporators: John Hempsel, J. William Rupprecht and August Deuchler.

New York, N. Y.—A. J. Hemphill has been incorporated to manufacture Hardware; capital, $50,000. Incorporators: Albert J. Hemphill, Hoyt Spelman and J. Ward Smith.

Palatine Bridge, N. Y.—Mohawk Stove Co. has been incorporated. Capital, $150,000. Directors: H. A. Shaper, of Palatine Bridge; F. W. Bauder, of Fort Plains, and O. O. Stillman, of New Brunswick, N. J.

Rockford, Ill.—The C. W. Parker Manufacturing Company is the name of the latest Rockford concern which has started operations on the water power. Charles W. Parker is at the head of the company. A specialty will be made of fine tools and general jobbing.

St. Louis, Mo.—Davis Expansion Boring Tool Company has been incorporated; capital stock, full paid, $20,000. Holders: Emery E. Davis, Alexander Landau, Arthur E. Leusseler and Helmuth Johtz.

Changes.

Lancaster, N. Y.—The Lancaster Machine and Knife Co. is building a large addition to their plant on Court Street.

Le Roy, N. Y.—The Le Roy Plow Company, whose plant was burned on August 27th, have decided to rebuild in this village.

Oakland, Me.—The Dunn Edge Tool Co. has acquired the controlling interest in the capital stock of the Clark & Parsons Co., of East Wilton. The business of the Clark & Parsons Co. is the manufacture of the Hiram Holt Lightning hay knife, also grass hooks, serrated bread knives and grass shears. As soon as a suitable building can be erected for the purpose the plant will be removed to Oakland where the business will be conducted in the future. About twenty-five men are employed in the East Bolten shops.

Phoenix, N. Y.—The Phoenix knife factory at Phoenix was sold this morning in this city on a judgment in foreclosure for $26,000 to G. G. Walters, of Syracuse, who represented the Mutual Life Insurance Company. The property is said to be worth $100,000.

Springfield, Mass.—The Springfield Machine Screw Company has leased 25,000 square feet of floor space in the Ames Building, Chicopee, and the plant, now located at 33 Lyman Street, this city, will be moved there soon.

Vincennes, Ind.—R. J. Hank, a member of the firm of the Eggerdenger Tool Co., which recently built a large factory on Eberwine Avenue, this city, for the purpose of manufacturing edged tools, is reorganizing the company with an increased capital stock. The newly organized firm will be known as the New Eggerdenger Tool Co., of Vincennes, Ind.

Winnepeg, Man.—The Canadian Moline Plow Co. have started work on the construction of their new warehouse at the corner of Chambers Street and Logan Avenue. The warehouse will be 82 by 79 feet and will have a stone foundation, cement floor basement, and metal clad, frame structure. A side track is being put into the premises from the C. P. R. yards.

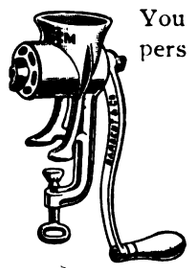
"BLUE BOOK" CREDITS OF THE HARDWARE IRON & METAL TRADES.

We have just issued the most complete and reliable book of credit ratings for this special branch of trade that has ever been published, containing about 400,000 rated names of wholesalers, retailers and manufacturers, covering the trade thoroughly. The ratings are conservative and very reliable. The ***paying record*** is based upon ***ledger experience*** of credit men everywhere.

You buy credit information. Isn't it the part of a good buyer to post himself thoroughly on the merits of a book of ratings, gotten up especially for his trade by men with ample capital and who are thoroughly trained in this class of work and who make a ***specialty*** of it?



Terms of subscription can be had by addressing

Iron and Hardware Mercantile Agency,

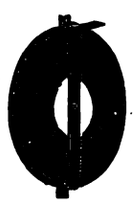
CLEVELAND, 844 Society of Savings Bldg.

MINCE-PIE TIME COMING

MANY GEMS SELL THEN. ARE YOU READY?



You should put in a full stock of Sargent's Gem Food Choppers because the housekeepers will want them as soon as there is a demand for mince pies. Every season has its calls for the Gem, but within the next few months they will sell fast.

We Will Help You Sell the Gem

By advertising extensively in the publications read by women. By furnishing attractive slips for you to distribute among the housekeepers of your neighborhood so that they will know you sell the Gem By supplying you with carefully prepared advertisements, electrotyped with your name and address, and ready for use in yonr local papers. These advertisements will constantly remind women that they need the Gem and that you sell it. By including with the choppers attractive show cards to hang about the store—a further reminder that will be seen by all who visit your store.

BICYCLE AND SPORTING GOODS RECORD.

Bicycle manufacturers and dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Stores, Incorporations, Etc.

New Haven, Conn.—The Holcombe Hardware Company has been incorporated. The capital stock is $50,000. The company will engage in the manufacture and sale of automobiles. The incorporators are Harry Holcombe, Harry W. B. Manson and G. Cowles Tolman.

Changes.

Atlantic City, N. J.—Albert J. Wootton, who conducts the marine Hardware and sporting goods house at 2319 Atlantic Avenue, has purchased the entire stock of D. C. Johnson of this city, and in order to make sufficient room for the surplus of sporting goods is having his establishment greatly enlarged in every particular.

Aurora, Ill.—Wm. Reid has bought out the business formerly conducted by Althoff & Reid.

Cambridge, Pa.—L. E. Huckleberry has purchased a half interest in the business of W. H. Hill, which will hereafter be conducted under the firm name of Hill & Huckleberry.

North Billerica, Mass.—The United States Cartridge Company intend to build its new powder storage houses in North Billerica, in the vicinity of the plant of the Lowell Rendering Company. The company proposes to construct powder houses on plans radically different from the old buildings. They will be put under ground, so to speak, and will be protected by high banks on the outside. Even if there should be an explosion at any future time, the Cartridge Company officials are confident that no damage could be done to other property. The plans are similar to those recommended by the government experts.

Rochester, N. Y.—The Eclipse Machine Company having purchased the Cinch coaster brake patents, and the Riggs-Spencer Company having discontinued business, the Ashley Machine Company, Rochester, N. Y., has acquired the machinery and tools, and will be in a position to supply Cinch parts. The Eclipse Machine Company being possessed of the right, the Rochester concern cannot, however, supply the Cinch complete, the manufacture of which will be discontinued.

Rochester, N. Y.—The E. H. Hall Company are now in full possession of their new four-story building, at 59-65 Exchange Street, this city, which gives them an increased floor space of 15,000 feet. This was made necessary by their increase of business, 1903 they state being the banner year of their history.

Rome, N. Y.—The bicycle repair shop formerly conducted by the Bowers Brothers has been discontinued.

Salem, Ohio.—W. B. Thomas, who conducts a bicycle repair and plumbing shop at 23 East Main Street, has opened a branch plumbing establishment in Leetonia.

Springfield, Ohio.—The new factory of the Young Arms Company of Columbus, will be built in this city. The company, through its general manager, Charles A. Young, has purchased five acres of land in West Main Street, as a site for the new plant. Mr. Young says they will begin next Spring upon the construction of a three-story brick factory 180 feet by 65 feet, which will cost about $25,000. The company is now employing 60 men, but when the new plant is in operation it will increase the number to 125, and all of them will be skilled mechanics.

Fires.

Milwaukee, Wis.—Fire in the factory of the National Cycle Enameling and Supply Company, 157 West Water Street, did $3,000 damage on Oct. 17.

Newark, N. J.—The business conducted by Herman Austin, was damaged by fire to the extent of $500.

Miscellaneous.

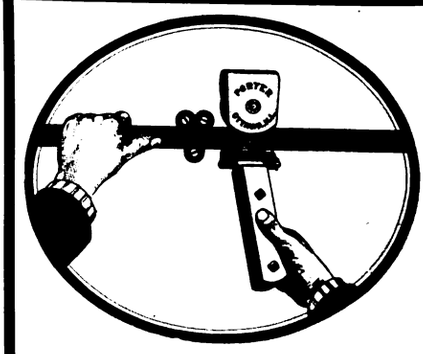
Connelsville, Pa.—Local Hardware dealers say the demand for sporting goods was greater for the last few days before the opening of the shooting season than it has been for years. The sale of single and double guns was especially large among the foreigners, and, as many of them are unnaturalized, the game wardens will have something to keep their eyes open for.

New York, N. Y.—Seven hundred automobiles, worth $20,000,000, are licensed in the State of New York.

Philadelphia, Pa.—T. J. Heller, who, for some time has been the Eastern representative of the Federal Manufacturing Company, has severed his connection with that concern and engaged with the Standard Roller Bearing Company, of Philadelphia, a million-dollar corporation. Heller will have the sales management of the steel ball department, which grows out of the recent purchase by the Standard people of the ball business of the Grant Tool Company.

Embarrassments.

Akron, Ohio.—Frank A. Koehl and Bessie R. Koehl, doing business at 198 South Main Street, under the firm name of the Century Cycle Co. have made a deed of assignment for the benefit of their creditors. Assets $1,500, liabilities about the same. The firm dealt in bicycles, sporting goods, etc. J. V. Welsh is named as assignee.



Lowell, Mass.—The firm of Horace L. Shattuck & Son, Hardware, bicycle and automobile dealers of Lowell, Boston and Providence have assigned, with liabilities, it is understood, of $500,000. The firm is one of the oldest in the city, and while the main business here is in Hardware in the other cities the trade is confined almost exclusively to bicycles and automobiles.

New York, N. Y.—McKee & Harrington, who make the Lyndhurst bicycle in this city, and who are seeking relief in bankruptcy, have finally filed their schedule. It discloses liabilities of $29,452; assets, $4,410. Of the liabilities, $27,324 is unsecured; debts due the firm on open book accounts $1,952; bills, promissory notes, securities, $2,000. The principal creditors are: American Cycle Manufacturing Works Co., Hartford, $1,272; Hartford Rubber Works Co., Hartford, $309; J. R. Keim, Buffalo, $662; Pennsylvania Rubber Co., No. 127 Duane Street, $300; Arnold Schwinn & Co., Chicago, $777; Alex. Van Rensellaer, $2,070; Arabella Mckee, $14,131; John McKee, $4,500; Day Manufacturing Company, $350; Empire State Cycle Company, $1,105. The assets consist of stock, $2,000; fixtures, $200; accounts, $1,952; notes, $122 and cash, $88. Charles F. Harrington has individual debts of $7,884 and assets of $4,000, consisting of a house at Lyndhurst, N. J., mortgaged for $3,300.

PORTABILITY—Weighs only nineteen pounds including traveling case.

The Hammond Typewriter Co.

69th to 70th Sts. and East River, New York, N. Y.

Our Latest Business Bringer

THE "GRAND RAPIDS"

THIS new Refrigerator—"The Grand Rapids"—is the companion piece to the famous "Leonard Cleanable"—*at a lower price*. The agency for both goes together.

Made of Ash instead of Quarter Sawed Oak, but with all the features of the higher priced machine, making it our "cheap" line, but even then a better *practical* refrigerator than the *best* of other makes.

Don't buy refrigerators until you have carefully investigated the advantages of handling this *couple*, the easiest selling and best known refrigerators made.

The "Grand Rapids" is made of ash, golden finish, double box throughout, insulated with charcoal sheathing, lined with zinc or white enamel, raised carvings, real bronze trimmings, removable flues, solid iron shelves, air-tight locks—*all* of them talking points. The name alone will sell it.

The "Leonard Cleanable"—known everywhere—quarter sawed oak panels, lined with real porcelain on sheet steel.

This makes the best selling combination it is possible to get.

Send for catalogue. Samples for comparison will be shipped on request.

ANNOUNCEMENT.

WE beg to announce the successful culmination of our negotiations with the National Lighting Co., Chicago, U. S. A., whereby we secure entire control of the same. The National Lighting System is too well known to require much description Would say, however, that recognizing its extreme popularity and the fact that we have had thousands of inquiries for such a system that we determined to secure it if possible.

WE HAVE NOW GOT IT and feel that with the combination of the **National Lighting System** and the **Wonderful Doran System,** we have the two best lighting plants in existence.

IS YOUR STORE WELL LIGHTED ? ?

Good store light is your best salesman. It insures an ever increasing patronage. It is a big dividend paying investment. You know it. Now, are you satisfied with your present lighting arrangement? Is it as good as your prosperous neighbor's? Does it cost too much? You should investigate and try the

National Lighting System

This system is far ahead of anything on the market. It produces an abundance of strong white light at the minimum cost—less than 20 cents per week to light a room 30 x 30 feet five hours daily. Think of it. It is absolutely safe—insurance companies make no extra charge. It is easily operated by anyone and will last for years and years.

Now, to show our confidence in the system we send

On Approval for One Month's Test

Fair, isn't it? The National Lighting System is the most powerful and economical system you can adopt. Write us now and give it a test. Costs nothing until you are convinced it IS the best.

Sent Free—Illustrated catalogue and price list. Several good agents will find our proposition interesting. Write, telegraph or phone us for particulars.

Learn Advertising

There is no thing so valuable to the man in business as a knowledge of advertising. It is the greatest force in modern business and no young man can hope to achieve a substantial and enduring success without it The advertisement writer and manager is one of the highest priced em ployees in any business, and his opportunities for advancement are the best. Any man with a good common school education can win for him self a place in the advertising world.

Many of those who have followed my instructions now hold positions with leading concerns and are receiving from $30 to $125 per week. Mr. Charles H. Brown, President of The Chicago Pure Food Marketing & Distributing Company, says: "About six years ago the business at which I was working paid me $20 per week. I studied advertising and in a very short time I doubled my salary. Six months ago I was elected President of a $250,000 Corporation and I am Vice-President and Manager of an other large corporation with liberal stockholdings in each. The foundation of the progress I have made was laid by the careful study of Bates Literature. I am satisfied that the foundation for a career in the advertising business can be made by mail, and I am satisfied that Mr. Bates can do this better than any other person or organization in the world."

My course is the only one being given in connection with an actual advertising business. It is therefore the most practical course. "A Business Course for Business Men."

If you are dissatisfied with your present salary, if your work is un congenial, or if you wish to learn to advertise your own business in the most effective manner, send three two-cent stamps for my handsome sixty-page prospectus telling how and why advertising can be taught, who should study advertising, and booklets "Ill Fortunes of Brother Bill," "Other People's Brains," and "How Shall A Young Man Succeed?"

HOW DOES THIS STRIKE YOU?

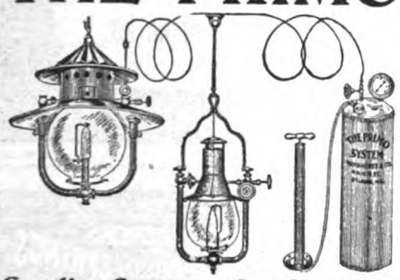
TRY BEFORE YOU BUY.

To further demonstrate to you that our Lighting System is a "Money Saver," and the most practical and safest on the market, we will allow free trial for ten days and guarantee it against imperfection for two years. Can you afford to be in darkness any longer with this opportunity before you? Send in your Diagram for Estimate. We are manufacturers, not assemblers. Avoid cheap imitators who demand money in advance.

WHITE MFG. CO. 193½ Michigan St., Chicago, Ill.

Ann Arbor Lighting System

BE INDEPENDENT



of the gas and electric light companies.

With an Ann Arbor Lighting System you can light your store better and cheaper than with electricity or gas. And the cost of operation is only about one-tenth as much. If you are using kerosene lamps, you should be particularly interested. Fuel is gasolene, absolutely safe, and permitted by the National Board of Fire Underriters.

If you want a store that will draw trade, write today for information and introductory offer. Liberal proposition to agents. Write for Booklet A on Lighting System, and Booklet C on Lamps for store and house.

OUR GASOLINE LIGHTING SYSTEM

and Lamps are delighting our customers, because our Improved Generators are properly constructed; we have been improving them for four years—anyone can easily clean them. Hundreds of testimonials from merchants. We don't ask you to take our word for it—**we send them on trial.** 600 candle power Lighting Systems—Arc Lamps—Gravity Lamps—all styles. We are selling hundreds of our Improved Generators (burners) to put on other lamps where the burner has proven worthless. Reduce your light bills 75 per cent., and sell to your neighbors.

Agents wanted everywhere. Absolutely safe. Permitted by Insurance Companies. We are headquarters for all kinds of mantles. Write for catalogue and prices.

PRICES CURRENT.

The prices noted in this Prices Current are intended for the Hardware trade only, and for such quantities as are usually purchased by retail dealers. They are carefully revised and represent quotations at which purchases can be made. Very small quantities, and broken packages, frequently make higher prices necessary.

Subscribers are requested to notify us of any discrepancies, as we desire to make this department of our paper worthy of their constant attention.

The list prices, from which discounts are given, will always be furnished the dealer upon request, by the manufacturer quoted.

SPECIAL OFFER TOTAL ADDER CASH REGISTER OFERTA ESPECIAL

CAPACITY $1,000,000

"WHAT THEY SAY."

CENTURY CASH REGISTER CO., LTD.,
Detroit, Mich.

GENTLEMEN—We now have in use six of your Cash Registers in our various Stores and are so much pleased with them that we take this occasion to write you about it.

We considered at first buying high priced Cash Registers, but upon making a close examination of your Machine we were so much impressed with its merit that we thought it folly to pay an extra price and get no better service.

We shall doubtless need several more Cash Registers and assure you that we will use your brand. Wishing you every success, we are,

Yours very truly,
PEARSON-LINN COMPANY,
Per A. C. Pearson, Gen. Mgr.

In many cases the larger dealers after receiving the first Machine have ordered a sufficient number to equip all departments in their places of business. Take for example the Pearson-Linn Co., have seven Centuries in operation in their mammoth Retail Establishment at Danville, Ill.

We are sure you will be equally as well pleased as many others who have accepted our offer.

Please let us hear from you. Every machine sent on 7 days' trial and guaranteed for 5 years.

SPECIAL OFFER.—We have a plan for advertising and introducing our machine to new trade which we are extending to responsible merchants for a short time, which will put you in possession of this high-grade, up-to-date, 20th Century Cash Register for VERY little money and on VERY easy terms. Please write for full particulars.

Cajas Contadoras de Dinero, Totalizadoras.
Capacidad: $1,000,000

"LO QUE SE DICE"

CENTURY CASH REGISTER CO., LTD.,
Detroit, Mich.

MUY SRES. NUESTROS: — Tenemos en la actualidad seis de sus Cajas Contadoras en uso en nuestros distintos establecimientos, y nos hallamos tan satisfechos de ellas, que deseamos dirigir à Vds. la presente.

Pensamos al principio en comprar Cajas Contadores de alto precio, pero, después de hacer un examen cuidadoso de su aparto, quedamos tan favorablemente impresionados por sus méritos, que creimos un desatino el pagar un precio más crecido sin obtener mejor servicio.

Indudablemente necesitaremos varias Cajas Contadoras más, y pueden Vds. contar con que compraremos las Cajas de su marca.

Deseàndoles prosperidades, quedamos de Vds. Affmos. y S.S.

PEARSON-LINN COMPANY,
Per A. C. Pearson, Gerente.

En varias ocasiones ha sucedido que comerciantes de importancia después de poner en uso la primera Caja Contadora, han pedido un número suficiente para proveer todos los departamentos de su casa. Como un ejemplo, presentamos á la casa Pearson-Linn Co., quienes tienen en uso siete Cajas de la marca "Century," en su gigante establecimiento al detal en Danville, estado de Illinois. Tenemos la seguridad de que Vd. se hallarà tan complacido como lo han estado otros, de haber aceptado nuestra oferta. Celebraremos recibir sus gratas noticias.

Todas nuestras Cajas Contadoras se venden después de un ensayo de 7 dias, y se garantizan por 5 años.

OFERTA ESPECIAL.—Tenemos un sistema para anunciar é introducir nuestras Cajas Contadoras de Dinero entre nuevos clientes, y hacemos esta oferta, por algún tiempo, á todos los comerciantes acreditados, facilitándoles así por MUY poco dinero, y en condiciones MUY ventajosas, la acquisición de nuestra Caja Contadora de Dinero del siglo 20, que es la más moderna y de superior calidad. Solicítense pormenores de los fabricantes.

PERFECTED
GRANITE ROOFING

The Standard
Ready Roofing

"Will not run" from roof or siding—is not affected by heat, cold, rain, snow, acids or steam—it is more sightly—far safer—decidedly cheaper, and more durable than any other material used for the purpose.

Very easy to apply, and once laid requires no recoating and will last for years without attention.

Send for Photo Phamplet.

Eastern Granite Roofing Co.
Irving Building, New York

Everything In Its Place
Why not your tools?
The best place for them is the
No. 1903 HANDY TOOL CHEST

We manufacture Tool Chests of all sizes, fitted up with a superior quality of tools, for boys, youths, gentlemen, housekeepers, farmers, planters, carpenters, railroads and mines. Also machinists' empty tool chests.

There's money in handling them. Write us. Mention Hardware.

THERE'S MONEY IN RAIN
and rough weather if you carry
Blizzard Storm Fronts

The front that closes up a buggy in half a minute. Cleverest, easiest adjusted, quickest selling. Millions read our ads in the popular weekljes, magazines, agricultural papers, etc. **Only** storm front advertised. People write us all the time asking where they can get these fronts. We'll send inquiries from your locality to you if you handle "Blizzards."

THREE FREE

We will express you prepaid, as a trial order, three Blizzard Storm Fronts on the condition that if you sell them within thirty days you pay us, if not, you return them **at our expense.** Liberal, but risky? No risk at all. **We know** you will sell them and write us for more. **Order today.**

Not a drop can touch you when your buggy is closed up by the
Blizzard Storm Front
(Patented in United States and Canada.)
Fits Any Buggy
Adjusted in 30 seconds without getting out or removing gloves, sides open and close as quickly and easily as a door, large line pocket, guaranteed satisfactory. The large window, 12 x 20 inches, is a pliable transparent material that won't break. Rubber Cloth, $3.00; Heavy Rubber Cloth, $3.50.
Ask your dealer and be sure that trade-mark "Blizzard" is stamped on inside under window.
Sold by Vehicle, Harness and Hardware dealers. If yours hasn't it, write us. *Illustrated booklet free*

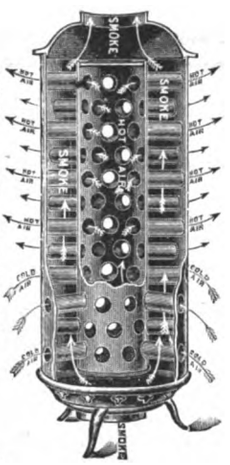
12 Million Families



Read about the **Rochester Radiator** every month in 82 publications bringing 18,000 inquiries a s ason. Those from YOUR TOWN are referred to YOU, if you carry our goods. Thus, we sell them to you, and then sell them FOR you.

Sell the Radiator That Radiates

Take a common sense view of heating. If you wish to heat a poker you hold it OVER the fire, not at the SIDE.

We hold 96 to 120 pokers over the fire, each having a hollow air space in center, through which a current of air rapidly passes, sending the heat to all parts of the room, getting results which no DRUM or SIDE HEATER can give.

A postal will bring you full description and proofs from men in the trade who have sold thousands of them. Made in 12 styles, and sell from $2.00 up. We will remember you with a Souvenir later, watch out for it.

A Long (K) Night In HARDWARE

¶ For years retail hardware men have been groping in the dark, looking for some efficient way to increase their business—some of them have found it!

Warren's Patent Sectional Glass Front Shelving

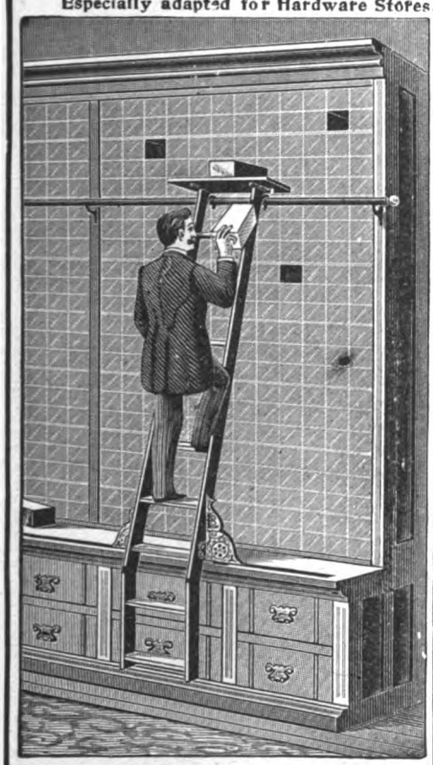
is designed and manufactured by a Hardware Man for Hardware Men.

¶ You can keep a line of samples of your entire stock on exhibition at all times.

¶ It preserves each article in the same attractive newness that it comes from the factory, prevents *dust, rust, finger-marks and dirt.*

¶ It enables you to sell goods to a *German*, a *Scandinavian* or *any* other foreigner who, even though he cannot speak English can *point* to what he wants.

¶ It improves the appearance of your store *100 per cent*; enables your salesmen to spend their time *selling* goods instead of *hunting* for them, and will *pay for itself in one year.*



¶ Send dimensions of your store and let us supply you—FREE—with a color plate made to scale, showing how *your* store will look when equipped with The Best Shelving in the world for your purpose.

¶ Remember the shelving is made on the unit plan—if you want to experiment—don't wish a complete outfit now—you can buy one—two—three stacks or sections—the rest will follow as your satisfaction increases.

WHY IS THE

O. K. THE BEST ROTARY WASHING MACHINE?

—BECAUSE—

1.—It is the only Rotary washer that has **Revolving Steel Ball Gearing**, reducing **the friction** and thus making the machine so **light running** and almost **noiseless.**

2.—The tub is made of **Louisiana Red Cypress Lumber, cherry finish**; the legs are **solid with tub** (not removable, breakable legs fastened with screws).

3.—The wheel turns right or left, pin wheel or dasher reverses automatically, turning the clothes back and forth through the hot sapsuds, and cleaning them without **rubbing** them to pieces.

4.—This washer is made by **experienced mechanics**, and will outlast any other washer on the market.

5.—The tub has a wringer box fastened with steel brackets.

6.—The lid on the tub closes tight, **no escape of steam.**

Manufactured by H. F. BRAMMER MFG. CO.,
DAVENPORT, IOWA.

W. A. STOKES & CO., 30 Warren St., New York.

From Margam Forge, Glamorganshire, South Wales, to Martin's Ferry, Belmont Co., Ohio.

MF

Note the Coincidence:

The most favored brand of roofing tin, the MF which originated at Margam Forge in South Wales about sixty years ago, is now being produced by the American Tin Plate Co. in its works at Martin's Ferry, Ohio.

At the Martin's Ferry Works the MF old style process has been combined with the "New Method" of finishing Terne Plates. The result of this happy combination has been the U. S. Eagle N. M.

Ask W. C. Cronemeyer, Agent, 1211 Carnegie Building, Pittsburg, Pa., for our new booklet which teems with useful information.

EVERY dealer should handle the Genuine Buckeye Pruner, because he can carefully push it to his best trade, in preference to any other pruner made.

Because it has stood the test of actual use for over 30 years.

Because it is the strongest made---the blades being hand-forged.

Because no other made cuts so easily.

It operates just opposite from other pruners. Grasp the limb with the hook, and cut towards you. It's quicker and easier than the other way.

Size 25—inch.

One dozen in a case.

Write for prices on a Sample Order.

APPERT GLASS JARS and WATER COOLERS

ARE PRACTICALLY UNBREAKABLE

GERM, RUST AND DIRT PROOF

CAN'T WEAR OUT

APPERT JARS offer perfect storage for all food products, such as cereals, sugar, coffee, butter, bread, etc. When used for holding vinegar, molasses, wines, or other liquids, they are drilled for faucets at any desirable point, thus placing their contents within easy access. All Coolers and Jars fitted with tight fitting covers.

In the **Water Cooler** the ice is placed in a separate container of glass or aluminum, and does not come in contact with the water. Self-closing silver plated faucets and aluminum covers are used.

3 to 40 gallon capacity.

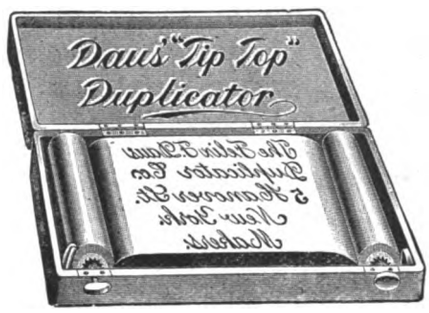
A Most Severe Test--But



A Pleased Custemer

NEW DORCHESTER, MASS.,
August 29, 1903.

THE FELIX F. DAUS DUPLICATOR CO.,
111 JOHN STREET, N. Y.

"GENTLEMEN:—

Your duplicator came to hand promptly, and I made my first trial of it yesterday. It far exceeded my expectations. Without the slightest difficulty I took

"224 Legible Copies"

and stopped because my paper gave out. In proof of this I send you Nos. 100, 125, 150, 175, 200 and 224. At my second trial I ought to do better. When you say 100 to 150 copies may be made, you are the most conservative advertiser."

Yours sincerely,
(Sig.) D. O. S. LOWELL."

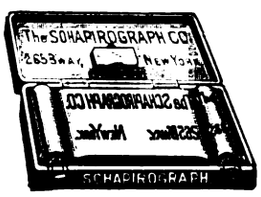
FOURTHLY
The Rochostor Automatio Oilor

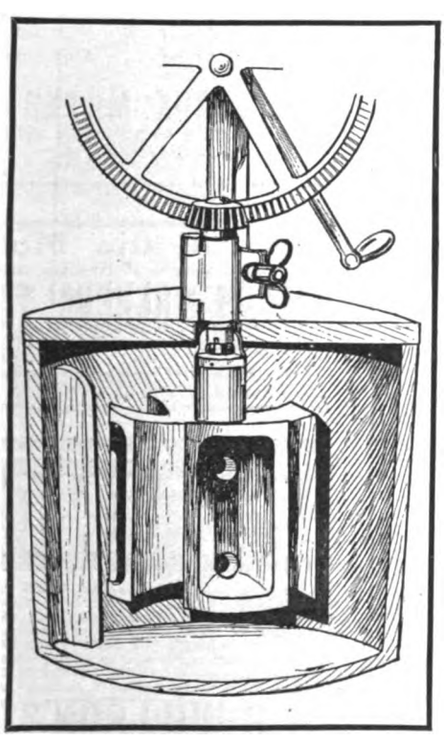


Fills Itself by depressing spout. Its removal for filling it unnecessary.
First: **Best Steel** used in its construction; copperized to prevent rust.
Secondly: **Spring or Solid Bottom.** Neithef of them will break through use.
Thirdly: **Wastes No Oil.** Overfilling impossible.
Fifthly: **Handiest Oiler** for automobiles or any machines.
A Trial order will convince. Send for catalogue. Mention HARDWARE.

Rochester Automatic Oiler & Supply Co.
Rochester, N. Y., U. S. A.

"It Gets There"—
So does The Schapirograph Duplicator.

In a surprisingly short time it will duplicate 100-150 circulars, invoices, price-lists from one pen or typewritten original, in all colors, without the use of printing ink or stencil.



You need it in your business because it lessens office work.

Those who use the Schapirograph acknowledge it to be a better duplicating device than others they have used. Try it for ten days free of charge. No deposit required. Send it back, if you don't like it, at our expense. What goes with it: One best ribbon for duplicating typewriting; two bottles of ink, a special rubber roller. Price $6 net. Send for circular. Mention HARDWARE.

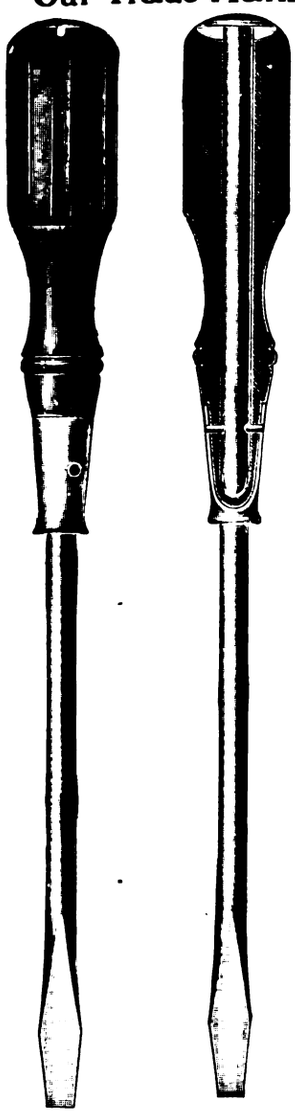
HURWOOD TOOLS

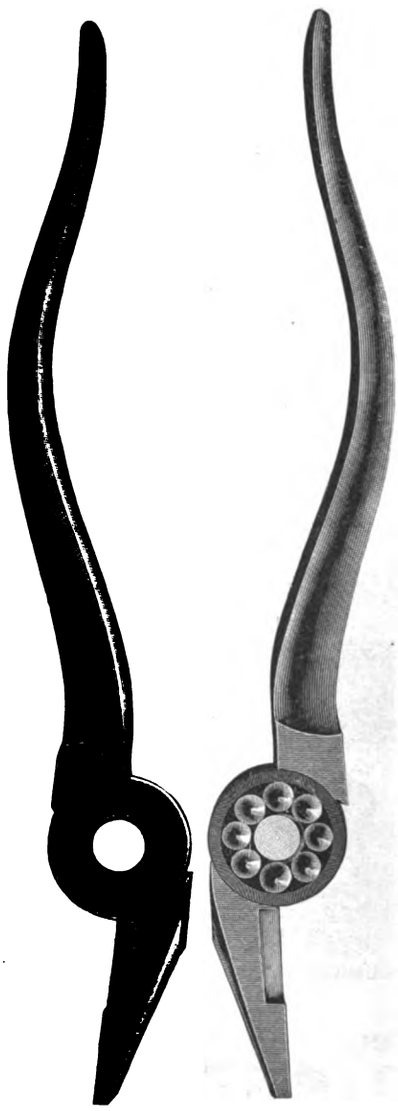


A Synonym For Quality

Our Trade Mark

Ball Bearing, Side-Cutting Pliers.

Strong and serviceable. Easily opened. The best pliers on the market to-day because of Hurwood Make.



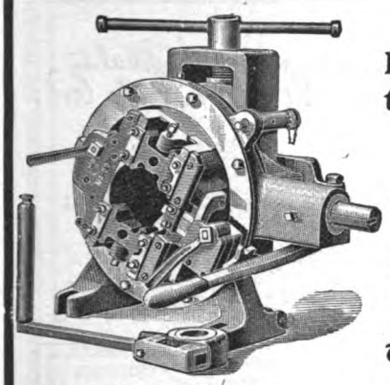
Hurwood Screw Drivers.

Practically indestructable. Quality of steel used unequalled for strength and toughness.

The steel extends from point of blade through the handle, and forms a top for rough use.

Impossible to twist the handle.

Ball Bearing, Side-Cutting Pliers.



Showing ball-bearings which reduce friction to a minimum and give greater leverage. Made in four sizes.

OUR GUARANTEE

Every tool we manufacture is fully warranted for quality of steel and workmanship. If one should give out in ordinary use, it will be replaced without cost.

A Single Fact Outweighs A Thousand Claims

IT is a well known fact among our customers that we have been in the manufacture of Edge Tools and Machine Knives for nearly three-quarters of a century.

Long experience, therefore, and up-to-date methods of manufacture enable us to make every tool a model of workmanship, durability and perfect proportion.

Highest Awards

were given us at Paris Exposition and two Gold Medals at Pan-American Exposition.

Our Edge Tools surpass the expectations of the most critical mechanics and sustain our reputation wherever sold.

Are You Handling White's Edge Tools?

They are excellent trade winners. When you buy our Edge Tools you know them by our Trade Mark—when you use them you know them by the cut and wear they give you.

Write us for catalogue and prices. Mention HARDWARE.

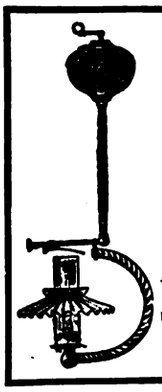
HOW DOES THIS STRIKE YOU?

TRY BEFORE YOU BUY.

To further demonstrate to you that our Lighting System is a "Money Saver," and the most practical and safest on the market, we will allow free trial for ten days and guarantee it against imperfection for two years. Can you afford to be in darkness any longer with this opportunity before you? Send in your Diagram for Estimate. We are manufacturers, not assemblers. Avoid cheap imitators who demand money in advance.

WHITE MFG. CO. 193½ Michigan St., Chicago, Ill.

Ann Arbor Lighting System



BE INDEPENDENT

of the gas and electric light companies.

With an Ann Arbor Lighting System you can light your store better and cheaper than with electricity or gas. And the cost of operation is only about one-tenth as much. If you are using kerosene lamps, you should be particularly interested. Fuel is gasolene, absolutely safe, and permitted by the National Board of Fire Underriters.

If you want a store that will draw trade, write today for information and introductory offer. Liberal proposition to agents. Write for Booklet A on Lighting System, and Booklet C on Lamps for store and house.

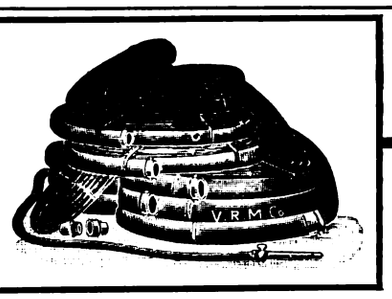
Learn Advertising



There is no thing so valuable to the man in business as a knowledge of advertising. It is the greatest force in modern business and no young man can hope to achieve a substantial and enduring success without it The advertisement writer and manager is one of the highest priced employees in any business, and his opportunities for advancement are the best. Any man with a good common school education can win for himself a place in the advertising world.

Many of those who have followed my instructions now hold positions with leading concerns and are receiving from $30 to $125 per week. Mr. Charles H. Brown, President of The Chicago Pure Food Marketing & Distributing Company, says: "About six years ago the business at which I was working paid me $20 per week. I studied advertising and in a very short time I doubled my salary. Six months ago I was elected President of a $250,000 Corporation and I am Vice-President and Manager of another large corporation with liberal stockholdings in each. The foundation of the progress I have made was laid by the careful study of Bates Literature. I am satisfied that the foundation for a career in the advertising business can be made by mail, and I am satisfied that Mr. Bates can do this better than any other person or organization in the world."

My course is the only one being given in connection with an actual advertising business. It is therefore the most practical course. "A Business Course for Business Men."

If you are dissatisfied with your present salary, if your work is uncongenial, or if you wish to learn to advertise your own business in the most effective manner, send three two-cent stamps for my handsome sixty-page prospectus telling how and why advertising can be taught, who should study advertising, and booklets "Ill Fortunes of Brother Bill," "Other People's Brains," and "How Shall A Young Man Succeed?"

HARDWARE

Among the handsome calendars that have already commenced making their appearance in the trade, a very striking and extremely artistic one is issued by the United States Wire Mat Co., Decatur, Ill., representing one of the Florodora chorus resting herself on a beautiful lounge covered with soft pillows; the whole ensemble, from the black hosiery and short skirits to the picturesque hat and uncovered neck form a picture worthy of the artist; the creation being from a painting by Bryson, the well known artist. The grouping of the picture, the pose and the work of the lithographer are admirably executed.

♣

One of the most uniquely original emanations from the advertising department of Sargent & Co. is a brochure recently distributed, consisting of 8 pages of golden opinions shown on a number of medallions artistically grouped so as to concentrate attention. The testimonials are from domestic science departments of leading colleges, from students in cooking schools and from a number of American kitchens where the advantages and manifold merits of the Gem Food Chopper are endorsed as a great household help.

♣

A large addition has just been erected to their plant by the Coates Clipper Company, of Worcester, Mass. The building is 75x50 feet, two stories and basement. They have now over an acre of floor space devoted exclusively to the manufacture of Clippers.

♣

The British cycle exports for September reached a total of £58,144, as against £57,724 last year. The total for the nine months was £684,438, which compare with £526,805 in 1902 and £410,248 in the preceding year.

♣

Canton Steel Roofing Co., Canton, Ohio, through C. E. Stevens, 17 Cedar Street, New York, exporter, placed an order for two carloads of steel ceilings with one of the most prominent Mahajarahs of Northern India. This ceiling was used in his palace as well as outside for veranda, wainscoating, etc. The palace is fitted up in the most approved American fashion, to minister to the Mahajarah's taste for Oriental luxury and comfort. The Maharajah has, in a personal letter, expressed his extreme satisfaction with this most artistic ceiling. Another Maharajah is already erecting a palace in Northern India fitted up in American way, and another two carloads of ceilings are going forward shortly through C. E. Stevens.

♣

The Reed & Auerbacher Company have been incorporated under the laws of New Jersey to carry on the general Hardware business as heretofore conducted by the firm of Reed & Auerbacher, 229 Bowery, New York. The business has an authorized capital stock of $20,000, all paid in, and will be continued at the above address as in the past. The officers, who are likewise the incorporators, directors and sole stockholders of the company, are: Charles A. Bollerman, president; Helen R. Auerbacher, widow of the former proprietor, vice-president, and Thomas J. Coakley, secretary and treasurer.

♣

W. H Coldwell, of the Coldwell Lawn Mower Co., Newburgh, N. Y., who, accompanied by his wife, has been abroad enjoying a two months' well earned vacation, returned on Monday of last week by the steamer *Minnehaha*. He reports having had the most enjoyable trip from every point of view he has evere experienced.

THE SANITARY VALUE OF SLATE.

A material, says *Cement and Slate*, that seems to be designed by nature for use where a clean, nonabsorbent surface is required, is slate. It meets all of these requirements, combined with strength and durability, and can be made neat and even beautiful where adornment is required. The surface is smooth, therfeore it will not absorb oils or odorous or decaying organic matter; it is not affected by acids, in which respect it is better even than marble. It is impervious to water, air, and changing weather conditions, and not sensibly affected by ordinary variations in the degree of heat. These qualities are not found in any other mineral product, and, taken in connection with the ease with which it can be worked and its consequent low price when compared with other materials used for the same purpose, it is really economical as well as highly satisfactory to use slate slabs for sanitary purposes.

The more fully builders and contractors realize the fact that slate has made a place for itself in the interior fittings of the building, as well as upon the roof, the more satisfactory work will they be able to turn out. Slate has the merit and is not endeavoring to obtain a position by favor which it cannot maintain by excellence. That this is true is shown by the increased call for mill stock. Builders are everywhere waking up to the fact that, to be up-to-date, they must use the most serviceable as well as the most economical fittings for their buildings. In the case of the sanitary construction slate fulfills these conditions.

Among the various uses to which slate is put for this purpose are bathtubs, wash trays, kitchen sinks, dairy uses, drainage, cisterns, etc. For all these purposes and many more the slate is prepared at the factory, according to measurements supplied by the contractor, and all that the latter has to do is to set the slate into place, after it has been set up and fitted at the factory before it is shipped. Slate used for this purpose can be used either in its natural color or it can be given any color or almost any figure desired. By the process of marvelizing slate all kinds of marble, granite, wood or tiling material can be imitated.

L. S. STARRETT CO.'S ACQUISITION.

Our readers will be interested to know that the J. Stevens Arms & Tool Co. recently closed the sale of their fine machinist's tools, patents, good will, etc., pertaining to the same, with the L. S. Starrett Co., of Athol, Mass. The firearms part of the business having grown so rapidly, the Stevens Company found it necessary to either erect more buildings, curtail their product, or dispose of some department, and as the Starrett Company made a satisfactory offer for the tools, the sale was closed and the transfer takes place November 20th, thus combining two of the oldest and best known high grade tool companies in the United States and the combined lines will be continued by the L. S. Starrett Co. The J. Stevens Arms & Tool Co. will immediately occupy the additional space thus gained in increasing their firearms output, making them one of the largest manufacturers of firearms in the United States, and with a greater variety of goods than any other manufacturer of kindred lines. Disposing of the tool department will also enable them to increase their output of automobiles, of which they are already one of the largest American manufacturers.

GOLDEN OPINIONS.

THE ADAMS BAKER MERC COMPANY,

GENERAL MERCHANDISE.

HIAWATHA, KANSAS, Sept. 25, 1903.

CENTURY CASH REGISTER CO., LTD.,

Detroit, Mich.

GENTLEMEN:—We are in receipt of yours of the 23d inst. and glad to know the two additional registers have been shipped, and that they will probably reach us before Oct. 1st. The first register we bought of you has been very satisfactory, we having tested it in every way we could think of, and have always found it to be accurate and capable of doing the work that other machines costing several times as much could do. Our telegraphic order of the 21st inst. for two additional machines for use in our store indicates more forcibly than words what we think of your register. Yours respectfully,

THE ADAMS BAKER MERC. COMPANY.

HARDWARE

VOL. XXVIII. NOVEMBER 25, 1903. NO. 4

HARDWARE is a Review of the American Hardware Market, specially devoted to the Retail Trade.

HARDWARE is published on the 10th and 25th of each month. The subscription is $1.00 a year, payable in advance.

Subscriptions may commence with any issue.

Remittances should always be made by New York Draft, Post-office or Express Money Order.

Register your letters when you remit by cash.

Foreign Subscriptions.—For each copy to be mailed outside the United States the Canadas, and Mexico, the price is $2.50 a year, postage prepaid.

Change of Date.—It takes two weeks to change the date, after your subscription is renewed.

Change of Address. Always give both your old and new address when you ask us to change your address.

The Name of your Post office and of the State you live in should always follow your own name when writing to this office. We cannot find your name on our books unless this is done.

Letters should be addressed

HARDWARE PUBLISHING CO.,

A. E. BOLLES, - - - Manager.

The Circulation of "Hardware" is Larger Than That of Any Other Paper in the United States Devoted Exclusively to the Hardware Trade.

Editorial Trade Review.

The large space given to the reports of the Conventions held at Atlantic City last week by the National Hardware Association of Jobbers, and the American Hardware Manufacturers Association, will be found upon perusal to contain, in the numerous addresses delivered by leaders in the industry, an abundance of good material for our readers. Each successive convention held by these important divisions of the trade, makes the wheels of our industry revolve with greater facility, for this annual interchange of views at close range smooths over a great many rough spots, and removes to a great extent the friction that ordinarily pervaded commercial proceedings in the past. We are enabled to entertain a greater respect for our competitors in business and find they are worthy of our closer friendship, and much of this is brought about by the heart to heart talks possible in the intermingling of earnest workers in this great field of activity.

The general business of the dealers by comparison with the business of a year seems to have held up remarkably well in some cases, surpassing it in volume and amount. A slackening in the demand for general supplies is to be anticipated at this season of the year when an effort is usually made to make invoicing as light as possible. We notice a tendency to grow pessimistic in some quarters because of this lessened amount of business which is inconsistent when we reflect what the year has already done for us. Naturally the belief is prevalent that lower prices may be obtainable on some lines for spring sales, as this is a condition of affairs usually striven for by active buyers. Let us hope that the lower quotations regarded as being possible through changing quotations on raw materials, may be promptly decided upon where possible so that stock orders may be given and the regular wants supplied by early deliveries on specified dates.

The dealers who believe they can safely rely upon the manufacturers to carry stocks, so they can buy in a hand to mouth method of doing business, will come to grief in the way of securing goods when wanted. The country is growing too fast and the farmer too wealthy for such old fashioned methods to again obtain a foothold. The dealer who expects a full season's business will have to order his goods sufficiently in advance of his wants to be sure of being able to keep his own trade steadily in line, so as to furnish seasonable requirements when they are needed. The length of time jobbers have been compelled to wait during the past year for their supplies will convey some idea what conditions would surround a jobbing business handled in this manner.

There are few changes, if any, in current quotations that would affect sales at retail or even in a jobbing way; and the relative difference as far as the most active lines are concerned, when measured by the changes in raw material, need not create a feeling of distrust regarding the future. There is plenty of work to be done which will be well paid for; crops to be planted with the most buoyant hopes of a top notch price; enterprises to be promoted and finished, and prosperity may still be a fruitful anticipation.

THE COMMERCE OF PANAMA.

The commerce of Panama amounts to about 3 million dollars per annum, its population to about 300 thousand, and its area to 31,571 square miles, or nearly equal to that of the State of Indiana. These figures are supplied by the Department of Commerce and Labor through its Bureau of Statistics, and are the latest available data on commerce, population, and area. Those of commerce are from the reports of the United States consuls at Panama and Colon, which have just been received, and not yet published; those of population are based upon the latest official estimate, which shows the population in 1881, and was based upon the census of 1871; while the figures of area are from accepted geographical authorities and are those of the area of the "Department of Panama" of the Colombian Republic. The principal ports are Panama, on the Pacific coast, and Colon, on the Atlantic side, and these ports are visited annually by more than one thousand vessels, which land over one million tons of merchandise and nearly 100 thousand passengers, chiefly for transfer over the Panama Railway, 47 miles in length, connecting the Pacific port of Panama with the Atlantic port of Colon.

Colon, or Aspinwall, as it is sometimes called, has a population of about 3 thousand persons. The city of Panama has a population of about 25 thousand. It was founded in 1519, burned in 1671, and rebuilt in 1673, while Colon is of much more recent date, having been founded in 1855.

The population, which, as already indicated, amounts in number to about 300 thousand, is composed of various elements—Spanish, Indian, Negro, and a limited number of persons from the European countries and the United States, especially those engaged in commerce and transportation and the operation of the Panama Railway. A considerable number of the population is composed of persons brought to the Isthmus as laborers for the construction of the canal, and of their descendants. Since the abolition of slavery in Jamaica a considerable number of blacks and mulattoes have settled on the Isthmus as small dealers and farmers, and in some villages on the Atlantic side they are said to be in the majority, and as a result the English language is much in use, especially on the Atlantic side. Some of the native population have retained their customs, speech, and physical type, especially those in the western part of the province, and claim to be descendants of the natives found in that section by the Spaniards when they discovered and conquered the country.

Of the commerce of Panama, the United States supplies a larger share than any other country. The importations at the port of Colon during the fiscal year ended June 30, 1903, as shown by the report of the United States consul, amounted to $952,684, of which $614,179 was from the United States, $119,086 from France, $118,322 from England, $76,386 from

Digitized by Google

Germany. The figures of the fiscal year 1903 show a considerable increase from those of 1902, in which the value of the imports at Colon were $776,345. Of the $614,179 imports from the United States at Colon in 1903, $200,744 was dry goods, $189,333 provisions, $59,890 coal, $38,642 lumber, $32,900 kerosene, $30,400 liquors, and $31,940 Hardware. The value of the importations from the United States in 1903 exceeded those of 1902 by about 160 thousand dollars. The exports to the United States from Colon in 1903 amounted to $173,370, of which $75,432 was bananas, $54,960 cocoanuts, $12,472 turtle shells, $9,400 ivory nuts, $6,460 hides, and $5,924 coffee.

From the port of Panama the exports to the United States in the fiscal year 1903 amounted to $193,342, of which $56,767 was hides, $49,974 india rubber, $27,805 cocobolo nuts, $16,598 ivory nuts, $13,372 deerskins, and $6,908 coffee. The consul at Panama states that the imported articles come mostly from England, Germany, France, Italy, and the United States, but gives no statistics of the imports.

Panama is connected with San Francisco by a weekly steamer schedule operated by the Pacific Mail Steamship Company, and with Valparaiso by a weekly steamer schedule operated by the Pacific Steam Navigation Company and South American Steamship Company. Two passenger and two freight trains leave Panama daily for Colon and Colon daily for Panama. The time for passenger trains over the 47 miles of railway is three hours.

From Panama there is one cable line north to American ports, and one to the south. The actual time consumed in communicating with the United States and receiving an answer is stated by the consul to be usually about four hours. There are also cable lines from Colon to the United States and Eupore.

The money of the country is silver, the rate of exchange having averaged during the past year about 150 per cent.

DEATH OF CHARLES F. BOCK.

Charles F. Bock, of Battle Creek, Mich., died on Monday, November 16th, at his home. Death was caused by organic disease of the heart which originated some two years ago, following an attack of pneumonia. He was born in Buffalo, N. Y., in December, 1836. At the age of 18 he entered the employ of the Hardware firm of Pratt & Co., of Buffalo, where he learned the business thoroughly in seven years. He was married in December, 1858, to Miss Harriet Hagelbarger, of Batavia, N. Y., who, with a son, Frank F., and a daughter, Mrs. George G. Tanner, of Indianapolis, survive him. In 1861 he went to Battle Creek to work for the late V. P. Collier. A year later he became interested in the Hardware firm of Arnold & Co., which continued for four years. Then was founded the firm of Bock & Peters, which continued successfully for fourteen years, after which time Mr. Bock sold out to his partners, and established the well-known firm of Charles F. Bock & Son, which has built up an immense business and made a large estate for the deceased. Mr. Bock had served as President of the State Hardware Association, through which he gained a large outside acquaintance.

DEATH OF WILLIAM W. WILCOX.

William Walter Wilcox, founder and senior partner of Wilcox, Crittenden & Co., Middletown, Conn., manufacturers of Marine Hardware, died at his home in Middletown of heart trouble, November 10, aged 78. Mr. Wilcox had enjoyed excellent health through life until 1897, when he had a mild paralytic shock.

Mr. Wilcox was the only son of William Walter Wilcox and Mary P. Rand, and was born in Middletown, May 23, 1825. Before the age of two he was left an orphan and his early life was spent with relatives in Portland. In 1847 he returned to Middletown and became interested in the manufacture of Brass Eyelets, etc., under the firm name of Penfield & Wilcox, which ten years later was changed to Wilcox & Hall. The business steadily increased, and in 1869 Mr. Wilcox formed the copartnership of Wilcox, Crittenden & Co., for the manufacture of a general line of Marine Hardware. He invented and patented several articles used in connection with vessels' equipment, and in 1885 he went abroad and succeeded in inducing the British Admiralty to adopt one of his inventions, the spur grommet, for use in the British Navy. In 1877 and 1879 he represented Middletown in the Legislature, and for the past 20 years had been a director of the Middletown National Bank. He was an attendant at the South Congregational Church and always contributed generously to its support.

WIERD MEMORIES OF THE MINERS OF GRAPHITE.

The graphite for most of our pencils comes from an obscure mine in the Adirondacks. One very hot day three of us started out to explore this region and see for ourselves whether, as had been said, one's first visit to the place was a wierd experience. The beginning of the trip was anything but poetic; the sand and stones in the road almost scorched the leather of our shoes, the choking dust filled eyes and nose, and agonizing visions rose before us of the shaded veranda and the chilled lemonade straws we had just left. But soon the regular mountain trail came in sight, toiling up and up, between rows of typical miners' cabins.

As we came around the bend in this path, there towered up suddenly into view a tremendous gray-blue hill of powdered granite, fully two hundred feet high, its particles all glistening with the intense heat of the sun; in a great arc about its base were gangs of men shovelling this waste product into teams, for cartage to unfinished highways. It was the work of a few moments to climb this hill of dust, itself on a mountain-side, and to obtain a splendid view down the lake-floored valley, all shimmering in the hot sunshine. The crushing mill shot the pulverized stone down a long sluiceway in a blue mist to this mound; the refined graphite itself was stored carefully in the mill, ready for shipment to the factories to be made into a paste for the pencils. But this point was not the goal; where was the mine which fed the mill?

Just beyond wound a narrow railway, which led to a black hole in the mountain-side and was lost within. It was dangerous to venture into that unknown darkness; it was perhaps a trespass of the law to loiter about even the mouth of the tunnel; at any moment an official of the mine might place us under arrest, or the tram cars might come rushing upon us from hidden ways in the midst of the mountain; but it was too late now to turn back. We entered, leaving the day behind.

Cautiously we groped our way at first; on each side were walls of rock, black and dripping wet, in sudden and deliciously cool contrast to the hot oven of out-doors. Flaring wicks in niches along the walls showed from time to time our whereabouts, for the tunnel had turned at once from daylight and burrowed down into the heart of the mountain. At times black, mysterious, slanting chasms opened to right and left. Once a long, low gallery sloped to a spark of sunlight fully six hundred feet distant, which glowed like a diamond far up on the right. The galleries, with their huge logs propped diagonally between ceiling and rock floor, were ghostly in the dark intervals between the torches; the monotonous patter of the drops of moisture merged at times into a faint trickle down the seamed and jagged walls; it was a fantastic accompaniment to the hollow, echoing splash, splash, splash of our foot-steps.

Perhaps a fifth of a mile had been covered in this exciting journey underground before we became aware of a heavy tremor in the walls of the sombre, Cimmerian chasm ahead; more and more frequently bits of stone were becoming dislodged by the vibrations and falling with many a splash all around. A sudden gust through the mine extinguished the only torch in sight; we stopped, shivering, to listen. From far beyond a dull booming and thudding came to our ears. We were in the blackness of the darkest night now, but it was equally dangerous to advance or retreat; if the worst should happen, however, and the tram cars came thundering around the corner, there was just room to crouch either side in the rough-hewn gutters, brimming though they were with water! As we struggled slowly on, alert and fearful, the vast rumbling increased.

Abruptly a shape loomed out of the mist ahead; then, as we turned a sharp corner, we saw in the distance lamps and torches twinkling, and a mighty steam drill pounding away, boring holes for a blast. The shape in front was a docile mule, hitched to a large flat-car which was standing on the rails. We were in a cavern of solid rock, with miners in all directions busily loading up the cars with fragments from the preceding blast, or else staring curiously at us through

Digitized by Google

the murky gloom of steam and powder-smoke. Splotches of muddy blue dripped on us from the low rock roof, as we stood watching the fascinating scene.

An old, gray-bearded miner, resting on his pick, stood near, watching us quizzically. After a moment of conversation, he granted us permission to stay, himself volunteering to lead us through the other galleries to the newer mouth of the mine. With a flaming tin torch he led the way through the dusky cave, and then began a panting, slanting, slippery climb up a transverse vein of the blue stone. More than once he paused to let us catch our breath and look back down the long, rough chute; away off in the galleried depths of the mine the flicker of a stationary torch would just be visible, perhaps, or the glint of wet graphite in the oblique, far-reaching rays from his own blazing beacon, as he held it high above his head.

So scrambling and stumbling upwards, he led us at last to the newer passage and thence down again till we came in view of the daylight once more. And a marvellous vision that first view was: we seemed to be gazing through the wrong end of a telescope on a beautiful landscape, for the gallery curved down in such a way as to command a long perspective of the valley, a thousand feet below. A brilliant picture, framed in jet, stood out clear cut, of the lake, set like an opal among the bright emeralds of the encircling hills, with here and there the white of a sail dotting its remote flatness, and the deep blue of the distant mountains for a background. The full moon was in sight above, and because of the darkness of the passage-way had become already a glowing globe of silver, while several stars around shone prominently forth. As we moved on, the silvery radiance paled, the stars all faded quite away, and the cool caverns of the earth opened abruptly into the furnace of sunshine again.

EDGAR WHITE BURRILL.

NEW ENGLAND HARDWARE TRADE.

(From our Traveling Correspondent)

In all parts of the country there has been, during the past few years, a growing tendency on the part of the Hardware trade to expand and enlarge in business. In many places this has been done by adding new lines of goods, or by branching more extensively into the wholesale trade.

The growth and enlargement of the trade has been more marked, or more noted at least, in the middle or Far West. But while big concerns have grown up with the development and settlement of the West, here in the East the Hardware trade has also been undergoing many changes. The business has been pushed and by close attention and carefully looking after customers' trade a good local jobbing business has been built up by many New England Hardwaremen.

One Western Massachusetts concern having made a marked success in this way, is the Peirson Hardware Co., of Pittsfield. The firm is composed of Henry R. Peirson and Frank E. Peirson, both of whom are practical Hardwaremen with up-to-date business ideas. In referring to business H. R. Peirson said that the cash trade was growing. This was accounted for by the fact that new lines were constantly being added. In the jobbing end of the business there was not much room to further enlarge, as the concern was covering all the territory that could profitably be worked from Pittsfield. The arrangement of the retail store of the Peirson Hardware Co. is especially good, and exceedingly attractive. Another of Pittsfield's retail Hardware concerns is the Berkshire Hardware Co., composed of J. H. Eells and Seldon Andrews. The Berkshire Hardware Co. carry a complete line of Hardware as well as paints, oils and sporting goods.

The Hardware & Mill Supply Co. of Pittsfield is, as its name implies, a Hardware and general supply store.

Eight years ago J. Douglass Law moved into his present store, which is to-day one of the most attractively arranged in Springfield. Large plate glass cases in front and down one side of the store contain an attractive line of cutlery and tools.

Another of the older Springfield Hardware concerns is Geo. A. Graves & Son. This concern makes a specialty of Builders' Hardware and carry a large stock in the line, doing some local jobbing business.

Up on State Street, corner of Main, is another of Springfield's leading Hardware stores—Homer Foot & Co. A great variety of goods are carried by Foot & Co., which includes about everything in Hardware.

An exclusively heavy Hardware concern is C. C. Lewis & Co., who do a wholesale as well as retail business, although the larger part of their trade is in the jobbing end.

One of the most up-to-date and progressive concerns of Hartford is Clapp & Treat. The business was established only a few years ago by Geo I. Clapp and I. C. Treat, and was a success from the start, and to-day is one of the large Hardware concerns of the State. Mr. Treat said that business was good and that their trade was constantly increasing in some lines. In addition to a general line of Hardware Clapp & Treat make a specialty of fine tools and mill supplies, and sporting goods.

An attractive window display was being made by Clapp & Treat by using two beautiful full mounted elk heads and arranging guns and rifles attractively about these heads. The heads were brought from Canada by Mr. Treat on one of his recent hunting trips.

In addition to Hardware Robt. C. Witte, of Hartford, carry a large line of seeds, paints, glass and house furnishing goods.

A well arranged store is that of Francis & Co., of Hartford. Builders' and general Hardware is well stocked, and a good line of shafting, hangers and belting is also carried.

Another of Hartford's progressive firms is Tracy, Robinson & Williams. Mr. Williams said that business was good and that trade was growing.

J. H. & W. E. Cone also were making a good window display of gun goods, especially on loaded shells and cartridges.

One of the oldest established Hardware houses of New England is that of J. A. Bassett Co., of New Haven. A very original and attractive sign is used, on which is printed in old English letters "Ye Old Hardware Store." Being established away back in the 18th century, the store is in reality the one in which "grandfather traded." But although the business is an old one, the methods of conducting it to-day are up-to-date and the advertisements of the J. A. Bassett Co. could not be improved upon.

In addition to general Hardware the Lightburn & Pond Co., of New Haven, do an extensive business in dairy supplies, as well as farm tools and seeds. R. C. Lightbourn is president and the secretary is G. H. Pond.

Another large retail and wholesale concern of New Haven is C. S. Mersick & Co., who make a specialty of Heavy Hardware, plumbers' and blacksmiths' supplies. Mersick & Co. also carry a large stock of iron and steel.

In addition to a general line of Hardware, N. T. Bushnell Co. do an extensive business in manufacturers' supplies as well as cutlery and tools. This firm reported business good and said that the outlook was bright for a good Winter's business.

Another New Haven dealer who does a large business in general Hardware as well as paints and oils is C. S. Phillips. The Hardware dealers of New Haven do not handle stoves or furnaces. These lines, however, are extensively handled by S. E. Dibble, who also carries on a large plumbing and tinning trade.

O. S. Wright is in the same line, and was showing a large variety and extensive stock of high grade stoves and ranges.

Most of the Hardware makers are busy and some report being still behind on their orders. They say that business from the West and South continues good. To meet the demands from a growing business some of the manufacturers are enlarging their plants. One such concern is Andrew B. Henry & Co., whose product of fishing reels and bird cages are now shipped to all parts of the world.

One of Connecticut's most enterprising Hardware houses is located in Willimantic. From this city Jordon Bros. have succeeded in building up a substantial jobbing business. A very complete stock is carried by Jordon Bros. and the firm have been especially successful in their wholesale trade because they have closely studied the wants of their country trade and carry the kinds of Hardware most demanded.

HAMMERNAIL.

GEORGE H. SARGENT'S SEVENTY-FIFTH BIRTHDAY.

In commemoration of the seventy-fifth anniversary of his birth, George H. Sargent, of Sargent & Co., entertained the members of the board of governors of the Hardware Club on Tuesday evening, November 12th, at a banquet which took place in the Governors' Room at the Club. It was his intention to have given this delightful function on its appropriate date, October 29th, but his original intention had to be modified on account of his daughter in Philadelphia having already committed him to a family party in which he was the honored guest. As it subsequently turned out, the members of the board of governors, in their individual capacity, had designed and prepared a sterling silver loving cup suitably engraved with an expression of their love and esteem which they intended presenting him on that interesting

THE LOVING CUP.

date. They had not then been advised regarding Mr. Sargent's proposed banquet, so the opportunity was seized upon to combine the two affairs when officially announced. The cup, of which we give an illustration, was forwarded to Mr. Sargent to surprise him at the family gathering, which it certainly did. Coming from his Associate Governors, it was a souvenir deservedly appreciated. At the banquet prepared at the Hardware Club, in addition to the governors, all of whom were present but two, who were unable to attend, a few guests, members of Mr. Sargent's business staff, were there, viz: Thomas J. Atkins and W. J. Ladd, who have been with the house since March and September, 1856, respectively; George Munson, who went there in 1860; George F. Wiepert and John Sargent—17 in all. Alfred D. Clinch acted as toastmaster, he having, on behalf of Mr. Sargent, arranged the details of the gathering. The elegant table decorations and setting and the excellence of the dinner reflected much credit on E. Blanc, the club steward, who entered heartily into the spirit of the occasion. After dinner the toastmaster called upon R. R. Williams, who made an address in behalf of the governors, to which Mr. Sargent responded feelingly and felicitiously. Other addresses were made by Messrs. Atkins, Ladd and Kennedy, after which the other guests were called upon by the toastmaster for remarks, and responded with interesting reminiscences and kindly personal tributes to the host of the evening. W. R. Walkley, one of the governors, who was unavoidably absent, contributed a poem, which was printed on the third leaf of the *menu*, which also contained a portrait of the host and a *fac-simile* of the cup. The following telegram, dated San Francisco, from Brace Hayden, who was unable to get there in time, was read as a toast: "Stalwart and sound in business principles, health and politics, may the echoes of the past be the reflection of future hopes without a discordant note, blending with perfect accord in the symmetry of a life well spent."

Mr. Sargent, having been one of the governors for a number of years, and was for two years its honored president, fully appreciated this superb token of his associates' love and esteem; his characteristic geniality, his ever present cordiality and kindly nature endears him to his friends both old and new. Fond of humorous sallies, his dignified demeanor is often softened by a love for humorous illustration, which is one of his noted characteristics. May he be long spared to us, and each birthday be rounded out with as suitable an expression of the high regard in which he is held by the leaders in every division of the Hardware industry.

HARDWARE PATENTS.

The following list of Patents, Trade Marks and Designs of interest to the Hardware trade are furnished by Davis & Davis, solicitor of American and Foreign Patents, Washington, D. C., and St. Paul Building, New York City.

PATENTS EXPIRED NOV. 9, 1903.

352,136. BAKING AND ROASTING PAN, J. B. Leach, Roberts, Ill.

352,189. SASH FASTENER, R. M. Hutchinson, Boston, Mass.

352,233. PNEUMATIC CHECK FOR DOORS, ETC., J. B. Edson, Brooklyn, N. Y.

352,341. WOODEN SHOVEL, H. Middleton, Houlton, Me.

352,355. SASH FASTENER, F. L. Rosentretter, Cleveland, Ohio.

352,416. CARPET TACK TOOL, M. S. Lantz, Chestnut Hill, Pa.

PATENTS ISSUED NOV. 10, 1903.

743,519. TACK HAMMER, C. S. L. Kennedy, North Easton, Mass.

743,527. WINDOW OPENER, J. Leonius, alias Nilus Leclerc, St. Eugene, Canada.

742,552. CASTER, M. W. Owens, Hamilton, Ohio.

743,758. CLOTHES DRIER, G. F. Schrader, Rochester, N.Y.

PATENTS EXPIRED NOV. 16, 1903.

352,508. BICYCLE SUSPENDER, S. W. Babbitt, Meriden, Conn.

352,561. PRUNING SHEARS, J. Neff, Jr., Pultney, N. Y.

325,570. HAMMER, S. G. Pillsbury, Long Island, Kans.

352,617. SASH FASTENER, H. B. Ives, New Haven, Conn.

352,619. ROOFING FELT, F. L. Kane, Brooklyn, N. Y.

352,719. WINDOW SASH HOLDER, H. W. R. Strong, Oakland, Cal.

352,741. DOOR HANGER, I. Doan, Aurora, Ill.

PATENTS ISSUED NOV. 17, 1903.

744,060. SIEVE OR STRAINER, J. Frye, Toronto, Canada.

744,064. POCKET KNIFE, H. Goldin, New York, N. Y.

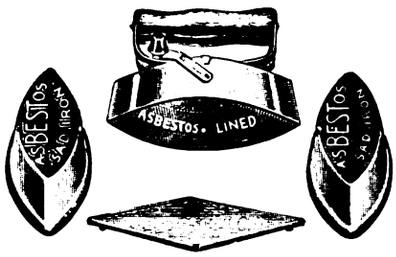
744,120. WRENCH, J. H. Shepherd, Denver, Colo.

744,149. SUPPORT FOR SHELVES OR OTHER ARTICLES, C. E. Wilton, Bristol, Pa.

744,232. BLIND OR SHUTTER HINGE, C. Purrington, Plymouth, Conn.

744,460. LAWN SWEEPER, K. F| Battle, Schenectady, N. Y.

BISSELL'S NEW LARGE LITHOGRAPHED HANGER A WORK OF ART.



Ever alert and progressive in the production of advertising features to broaden the fame and increase the demand for their product, the Bissell Company have just brought out what is unquestionably one of the most artistic and effective lithographed hangers that has ever been produced for commercial use. The original oil painting, from which this hanger is reproduced, was made by John C. Johnson, who promises to become one of America's great painters. These hangers are reproduced in fifteen colors on the best coated, lithograph stock, and the work has been done by one of the finest lithographers in this country. So faithfully has the work been executed that you can even detect the artist's brush marks in the reproduction. Although the cost of producing a hanger of this kind is considerable, it is apparent that this is a piece of advertising that will wield a powerful influence in creating a demand for the Bissell sweeper. Wherever this hanger is shown, it will be certain to command attention, and clinch in the minds of observers some strong points in favor of the Bissell sweeper. The Bissell Company will send one of these lithographs gratis to any dealer handling their carpet sweepers.

The Humboldt County Retail Hardware & Implement Dealers' Association held their first annual meeting in Eureka, Cal., on Oct. 28, and elected the following officers for the ensuing year: President, J. E. Janssen; vice-president, Fred Leach; secretary, H. E. Reid; treasurer, Frank Reid; executive Committee, C. C. Craford, Arcata; Chas. Williams, Ferndale; Fred Leach, Fortuna; Frank Kelly, Eureka; Peter Healey and J. E. Janssen, Eureka. The principal object of the association is to foster friendly intercourse between dealers to encourage co-operation in all matters pertaining to the interests of the trade.

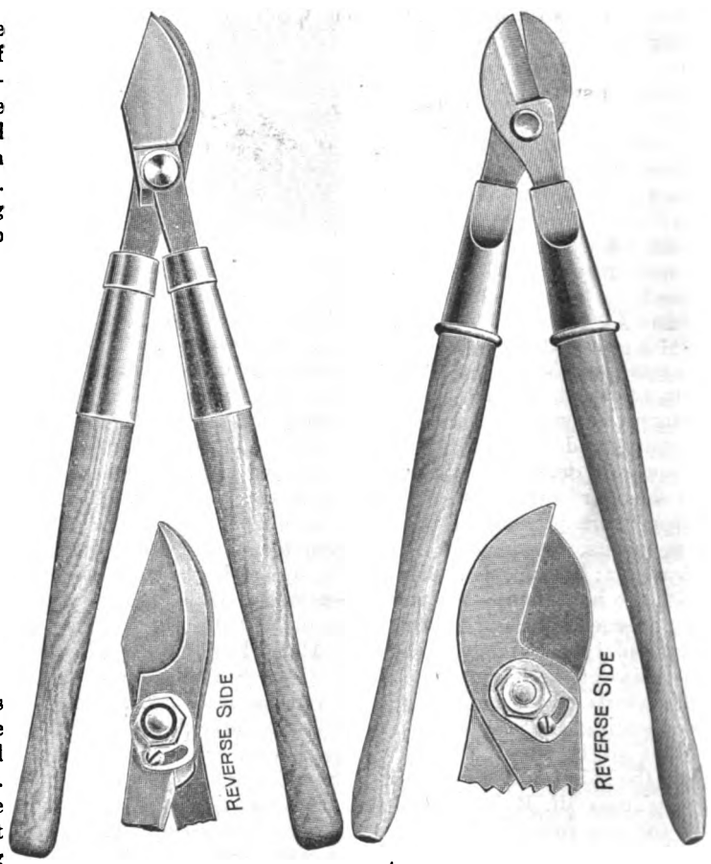
DOVER MFG. CO.'S ASBESTOS SAD IRONS.

The Dover Mfg. Company of Canal Dover, Ohio, manufacturers of Asbestos Sad Irons, call attention to the fact that they have recently made additions to their line until, as they state, they now have the only complete line of Sad Irons on the market, comprising as it does every iron which can possibly be required for use in the home. We illustrate their line herewith, and it will be noted that the irons which have been added are the Sleeve Iron and the Shirt

Waist Set. In construction, these irons are the same as the balance of the Asbestos line. By a proper employment of Asbestos liuing and dead air spaces, the handle of the Asbestos Sad Iron is rendered absolutely cool to use, while the core or bottom, being protected from drafts of cold air and being so constructed as to retain all the heat longer than would be possible with an iron of any other construction. The manufacturers state that Asbestos Sad Irons are being well received by the trade and the consumers. They are no



longer an experiment, but are everywhere recognized as among the leading Sad Irons. They say that their volume of sales during the past year has increased satisfactorily and the irons are well introduced throughout the entire country. The manufacturers are introducing a new feature in the packing of their product, the Laundry Irons, the Shirt Waist Set, the Pressing Iron and Polishing Iron being packed in individual boxes. These boxes are very neatly made of stained lumber, with lock corners and are intended

for the convenience of the housewives, as the irons may be kept in them when not in use. The manufacturers state that they have made a number of improvements in their shop methods during the past year and in consequence of these improvements they are producing more perfect irons, if possible, than ever before. They urge dealers to stock the entire line rather than any portion of it, and state that by their vigorous advertising in the leading publications read by women, they have created a steady and strong demand for them. They also state that their campaign of advertising will be continued and they propose to do everything possible to stimulate the demand for Asbestos Sad Irons and make them good, live stock for dealers to handle. The irons are carried in stock by the majority of the leading jobbers of the country and the Dover Mfg. Company will be pleased to mail catalogues and quote prices to all interested dealers upon application.

THE CRONK TREE OR HEDGE PRUNERS.

The Cronk & Carrier Mfg. Co., Elmira, N. Y., are the manufacturers of the Fresno pattern pruning shear of which we give an illustration. It is forged from high grade tool steel, finely tempered, having a solid wrought steel ferrule;

CRONK'S WOOD HANDLE PRUNERS.

also has their lock nut device making it impossible to work loose and ruin the shear. It is made in three sizes No. 120, 20 inches in length; No. 126, 26 inches; and No. 136, 36 inches. We also give an illustration of their Wood Handle pruning shear which also has the lock nut device. This tree or hedge pruner, being made with shear cut, will work very much easier than other pruners of this style. The blades of No. 10 are made of the best tool steel; the blades of No. 12 are made from fine cutlery steel, extra heavy and extra long. This is also made in three sizes, No. 10, 26 inches; No. 12, 36 inches and No. 14, 60 inches. The regular Cronk pruning shears have a long malleable socket in place of a one inch ferrule as used in most pruning shears, which is securely fastened to handle and riveted through blade, which in connection with the lock nut makes the bolted shear a decided success, being a great improvement over the old style shears which have been deficient in this respect. This new device is covered by their own patents both as to socket and lock nut.

OUR BRITISH LETTER.

(By our Special Correspondent).

LONDON, Nov. 15th, 1903.

EVENTS OF THE MONTH.

There have been few events during the past month of any special interest to Hardwaremen, and with the exception of the Brewers Exhibition, none of the Exhibitions held either in London or in the provinces have had any reference to the Hardware trade. The Brewers Exhibition, which has now been running annually for 25 years, was held at the end of last month at the Agricultural Hall, Islington, London, and was a very successful event. It included displays of apparatus and accessories required by brewers, hotel keepers and others, in the pursuit of their calling, and many manufacturers and manufacturers' agents made remarkably attractive displays of specialties, among which was a fair sprinkling of American novelties. Some good advertising mediums were on view and interesting examples of the potters' art included spirit kegs, bottle and water filters as well as domestic earthen ware. Some good examples of cooperage were shown, among which were some well finished woodwork and other novelties. The Cutlers' Feast was one of the important events of recent date. It is an annual event looked forward to by steel manufacturers and the functions associated with the election of the Master Cutler, together with his installation according to the usual ancient ceremonial, are interesting events. Mr. Michael Joseph Hunter, who has been elected Master Cutler for the ensuing year, is the third member of his family to occupy that position. His grandfather filled the office in 1852 and his father in 1860. The present Master Cutler was born in 1856 and took over the control of the firm's business, which consists in the manufacture of table and pocket cutlery, scissors and electro plate, in 1883. In my next letter I shall refer to the two important cycle shows which will take place simultaneously at the Agricultural Hall, Islington, and the Crystal Palace, Sydenham, at the end of the present month. These shows are looked forward to with a considerable amount of interest not only by motorists and cyclists, but by Hardwaremen and traders in cycle accessories and motoralities.

IRONMONGER-IMPLEMENT AGENTS.

Many country ironmongers in Great Britain add to their business that of agricultural implement agents, and distribute the productions not only of British manufacturers but of many of the more important American and Canadian firms of agricultural implement agents, during the Autumn and Winter months. The sale of most of the leading American productions is almost entirely at a standstill when the harvesting operations are over, and neither agents nor farmers entertain the question of buying or even considering the purchase of harvesting machinery and modern appliances whereby these operations are facilitated. The only machines which can rightly be placed under the category of harvesting machinery, now seasonable, is the potato harvester, which is now coming into general use in Great Britain, and, of course, is used during the Autumn months. The old-fashioned plan of harvesting potatoes was carried out entirely by manual labor, and during the late Autumn months many thousands of Irish farmers and agriculturists came over to this country, engaging themselves for a short time as potato getters, and their advent brought a considerable rush of trade to country ironmongers in consequence of the demand for potato forks, skips and baskets. The trade in these tools has largely been superseded by the use of potato harvesters, it being recognized that by the aid of these modern machines potatoes may be gathered much quicker and with less loss than formerly. Both English and American potato harvesters are now brought to such a state of perfection that the potatoes are not only dug up but collected and placed in sacks without the assistance of hand labor. The sale of such machines has engaged the attention of agricultural implement agents during the past two or three months, and now that the potato harvest is nearly over, the sale of food-preparing machinery occupies their attention. An examination of the stock of an up-to-date agricultural-implement agent reveals the fact that American manufacturers are rapidly coming to the front with their food-preparing machinery and grasping the requirements of this country. The chief machines now being sold by British ironmongers-implement agents consist of chaff-cutting machines, both for hand and power, root slicers, fingerers, and pulpers, as well as kibbling mills, corn and maize grinders and other appliances of a similar character; and country traders are now busily engaged canvassing their clients and introducing to their notice at markets and Autumn fairs, the respective merits of the different machines for which they hold agencies.

THE AMERICAN STEEL TRUST.

The present position of the Steel Trust in the United States has caused a considerable amount of apprehension on the part of British iron masters and manufacturers during the last few weeks. The threatended "dumping" of surplus stocks in Great Britain has naturally given rise to uneasiness; not only manufacturers, but dealers regarding the step with uncertainty not fully knowing what its influence on the market prices of both raw material and manufactured goods, will be. The threatened "dumping" has already become a reality and several cases of large consignments of American steel bars have been placed in this country at prices lower than British manufacturers were enabled to quote have occurred.

LARGE SHIPMENTS OF STEEL FOR SOUTH WALES.

The announcement that several cargoes of steel billets have recently been received in South Wales, where so much raw material is used in the manufacture of tin plates, has disturbed British makers of steel billets. One of the foremost firms of steel and tin plate manufacturers in the Swansea district have recently bought some thousands of tons of American steel bars at prices ranging fully 10 ? per ton less than English quotations. The tin plate trade in Glamorganshire and Monmouthshire has been in a very bad state during the last few years, and unfortunately many dismantled iron and steel works may be seen in the South Wales valleys. Within the last forty years upwards of 70 important works have been closed down. Messrs. John Lysaght, Ltd., who recently removed their extensive works from Wolverhampton to Newport (Monmouthshire), in order that they might receive the benefit of being located on the seaboard, have recently received a consignment of 100,000 tons of American steel bars. This firm's works, which are of an extensive character, are located along the banks of the River Usk, they are exceedingly convenient, and are built on the most approved plans, no expense having been spared in fitting up the new works with plant of the most up-to-date type. Messrs. John Lysaght, Ltd., are large manufacturers of galvanized iron, corrugated sheets, and other goods, in the manufacture of which large quantities of steel bars are required.

THE C. O. D. POSTAL SYSTEM.

Retail ironmongers have suffered considerably during the last few years in consequence of the energetic steps taken by some of the leading advertising firms and have lost many orders for novelties and specialties owing to the facilities given by parcel post arrangements, by which consignments of goods may be transferred from distant places at small cost. The threatened increase in the facilities for this class of trading has given rise to much controversy and discussion at recent meetings of ironmongers' associations, and the Central Board of the Ironmongers' Federated Association have taken up the question with a view of safeguarding the interests of retailers, especially those located in country districts where there is a natural tendency among residents to avail themselves of the greater advantages of trading at general stores and large emporiums. The Postmaster General has intimated that as soon as the country is ripe for the change and shows the need for an increased facility in parcel

Digitized by Google

post trading, he will put into operation a system of C. O. D. (cash on delivery) parcel post, somewhat similar to the experimental service which has been carried on in India for some time past. Private purchasers naturally regard the system by which they will be enabled to send their orders to unknown firms and to pay through the postal authorities when the goods have actually been delivered, with favor. The advantages to retail traders are very questionable and doubtless the majority of ironmongers will strongly protest against the innovation which will be little or no benefit to them, but which may seriously interfere with their returns. It has been argued by the promoters of the scheme that traders will be enabled to avail themselves of this C. O. D. system, but on the other hand it is pointed out that fully accredited traders have no need to pay cash before they receive the goods they order; consequently the C. O. D. system will not apply to them, because when goods are ordered by carrier or post, payment can be made in the usual way. In a similar manner I notice the National Association of Implement Manufacturers of America has placed on record their disapproval of the proposed Parcels Post Bill, the Committee on National Legislation having pointed out that its passage by the American Legislature would be prejudicial to American agricultural implement agents.

SHORTENING OF CREDIT.

There is a marked tendency in the direction of shortening of credit, and manufacturers, in this country, who formerly gave extended credit now insist on prompt monthly settlements. Naturally retail Hardwaremen find it difficult to pay prompt in view of the difficulty they experience in collecting their own outstanding accounts with the same degree of speed. The advantages of short credit and cash trading over the older credit systems have recently engaged the attention of the Liverpool Ironmongers' Association and members are urged to bring their terms of credit more in line with present day methods, reducing the time allowed and rendering their accounts with greater promptitude and at shorter intervals. It is only in this way that retailers can hope to cope with competition and obtain adequate capital whereby they may secure the full advantages of cash discount and ready money trading.

THE EIGHTIETH ANNIVERSARY.

The Pike Mfg. Co., Pike, N. H., find this year an exceedingly happy one for they are enabled to celebrate their eightieth anniversary. What a long period of time to have an American company continue without important change, except the volume and extent of a noted business! Few veterans in the Hardware business to-day can go back to a time when they never knew Pike and sharpening stones were synonmous terms. This business founded on a limited scale in the early days, now reaches to every port in the world where sharpening stones are regarded with any degree of interest. Even a half century ago there were but few varieties especially of scythe stones, when to-day they number an assortment with every grade of fineness demanded by the wants of the country that uses them. The noted distribution of sharpening stones now so important an item in the stock of a Hardware store, that none exists without an assortment; has been steadily developed by the far-reaching efforts of E. B. Pike who knows only too well the advantages of intelligent publicity, and in this he is ably seconded by his son, E. Bertram Pike, who keeps nobly to the pace set by his father. They own the quarries from whence are drawn the stones with which the name of Pike has long been identified such as the Black Diamond, White Mountain and Indian Pond Scythe Stones, the Lily White Washita and Arkansas Oil Stones. The company have the sole agency for the India Oil Stones, manufactured by the Norton Emery Wheel Company; they are also agents in this country for the celebrated Swaty Hones, Craigleith and Blue Miter Wheels, and handle nearly everything in the line of Sharpening Stones.

A TWENTIETH ANNIVERSARY.

The Detroit White Lead Works, Detroit, Mich., celebrate the twentieth anniversary of the manufacture of "Rogers Carriage Paints," one of their most important lines, by the issuing of a leaflet, cleverly written and handsomely printed, showing in an interesting manner "The origin of ready mixed varnish gloss carriage paints, and a short account of Rogers carriage paints." It is certainly in style and typography something for their advertising department to be proud of. In referring to the changes from past methods, the following is extracted from the "short account" given:

"To appreciate the value and perfection of Rogers Carriage Paint, we will look back to those years previous to its manufacture and consider the crude method then used for re-finishing vehicles. In the first place, when re-finishing became desirable, it was necessary to hire an experienced mechanic, who first laboriously scraped off the old paint and varnish. Then the vehicle was given a coat of lead, followed with several applications of color, and finally the rubbing and the finishing varnishes were applied. This process, as you can imagine, cost many dollars and consumed several weeks time.

No doubt there was much dissatisfaction felt over this slow and expensive method, but it was accepted as inevitable, and in consequence, many vehicles, either through lack of time or money, were never re-finished. Paint history makes no record of the fact but it hardly seems possible that no efforts were made to remedy this old system. In all probability there were many, but none that met with any success. The matter was brought to our notice by Dr. A. J. Gardner of Grand Rapids, Wood County, Ohio, to whose happy suggestion we owe the existence of Rogers Carriage Paint. It was not until after many months experimenting and by the use of materials hitherto unknown to the business that the perfected article was offered for sale, and it was thoroughly proven that Rogers Carriage Paint would take the place of lead, color and varnish. The result was that a man was enabled to paint his buggy himself for seventy-five cents, and have it ready for use in twenty-four hours." A neat little celluloid bookmark accompanies the leaflet and forms an appropriate advertising souvenir.

ONE CORPORATION FEEDS A MILLION PEOPLE.

Without question the United States Steel Corporation is not only the greatest corporation in the world in point of capital, but also in the number of stockholders. All over this country, in Canada, in England and on the Continent holders of Steel stocks are to be found. The common stockbooks have just closed for the quarterly dividend of 1 per cent., calling for $5,000,000 and it has been found that since June 6,010 persons have bought the common stock. This makes a total of 36,997 common stockholders, and is an increase of sixty-seven new holders for each day of the three months, counting Sundays. There are 34,958 preferred shareholders, which makes a total of 69,955 registered—the largest number in the world. To this there should also be added the holdings of the 28,000 employees of the corporation who are enrolled under the profit-sharing plan, making a grand total of 97,955 shareholders.

Census statisticians allow five persons to a family in the United States. On this basis something like 350,000 persons derive income from Steel stocks. As the number of employees is approximately 160,000, some 800,000 more persons get from the great corporation a livelihood through the wages it pays. This makes 1,150,000, or one-eightieth of the population of the United States, who look to the Steel Corporation for a living. To this number might well be added the shareholders and employees of many of the great railroads and transportation companies which handle the immense traffic of the company at Pittsburg and elsewhere. Certainly much of the revenue of these companies is derived from the operation of the big corporation, and this means wages and dividends for hundreds of thousands more people.

The corporations which approach the Steel Corporation in magnitude of stock lists are the Pennsylvania Railroad, with 35,000 shareholders; the Atchison, Topeka and Santa Fe, with 18,000; the American Sugar Refining Company, with 15,000, and the Union Pacific Railroad, with 14,000 stockholders. The greatest of these, the Pennsylvania Railroad, has only half as many registered holders. In Canada the Grand Trunk Railway is said to have 40,000 shareholders.

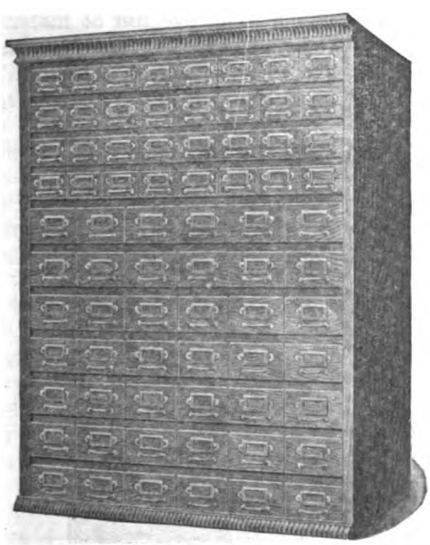
NEW GOODS AND SPECIALTIES.

AMERICAN ANTI-BENTWOOD CHURN.

The American Woodenware Mfg. Co., Toledo, Ohio, are the manufacturers of washing machines, churns, stable and derrick pails, plant tubs, and all kinds of tight cooperage. A specialty manufactured by them is their latest improved Anti-Bentwood churn, of which we give an illustration. It is constructed of first quality lumber, has patent adjustable hoops, three motion internal gears; the body is well constructed and sustained by steel rods, making it very strong

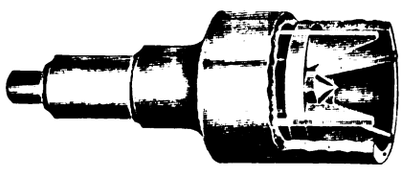


AMERICAN ANTI-BENTWOOD CHURN.

and substantial. Butter can be made from sweet milk by regulating the gear for the most rapid movement. For churning deep pan setting cream, the medium speed gear is used; for shallow pan setting, or heavy cream, the longest leverage on the large gear is called into play. This improved churn facilitates the butter being churned, washed, salted, worked and prepared for the table, in the churn. The company fully guarantee every churn.

HELLER'S DUST PROOF SCREW CASE.

We present below an illustration of the Heller's No. 1900 dust proof screw case, manufactured by W. C. Heller & Co., Montclair, N. J. It is one of the most practical cases ever offered to the trade for screws, taps, dies, machine screws,



HELLER'S DUST PROOF SCREW CASE.

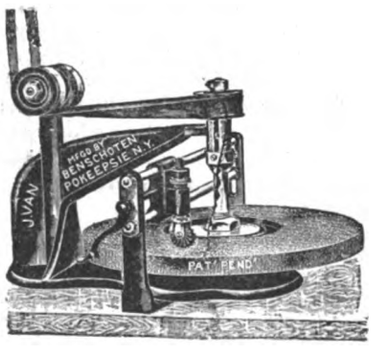
etc., etc. It contains 74 Heller's steel dust proof drawers, including a supply of divisions, so that the drawers can be divided into over 150 compartments holding from 3 to 5 gross of screws to a compartment. Each drawer is fitted with a bronze pull and card clip, and has a depression on side which is enameled, so the cost and selling price of contents can be written. The case has a steel back, keeping the contents in the same condition as if they were in their original packages. This case is so well made that it will last a life time, and takes but very small space. The size of the case is 26½ inches wide, 40 high, 11 deep and weighs 100 pounds. It is made with white wood or solid oak exposure, stained and varnished.

GOODELL MFG. CO.'S SPECIALTIES.

Goodell Manufacturing Company, Greenfield, Mass., are the manufacturers, among other specialties, of the Improved Bell Centering Punch, of which we give an illustration herewith. This tool is so constructed that it will quickly and accurately center both round and square stock. With only 4 bearings to touch the work and the guide following close to

GOODELL'S BELL CENTERING PUNCH.

the point of the punch, there is very much less liability of its being thrown out of the center by any unevenness of stock than with any punch put on the market. Size No. 1, centering up to 1 inch stock, is listed at $1. Size No. 2, centering up to 1½ inch stock, is listed at $1.50. This company also manufacture the Cutting-off Tool, of which we show an illustration. It is designed to cut quickly and smoothly any kind of round stock up to ½-inch. It is constructed with a



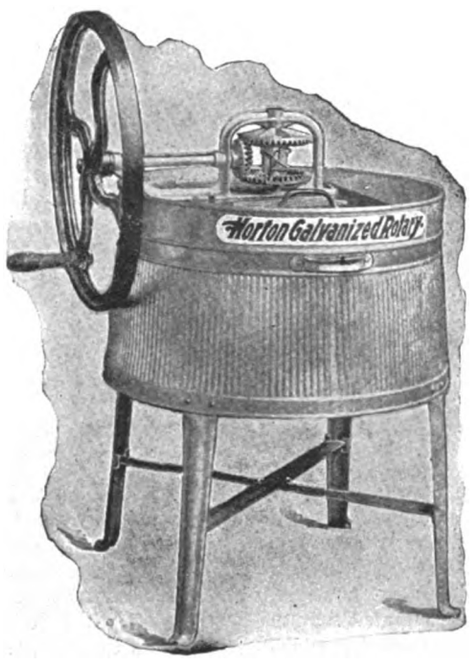
GOODELL'S CUTTING-OFF TOOL.

stop, enabling square and even lengths to be cut much more rapidly than by any other way. It is claimed to be invaluable in making dowels, pins, screws, etc. It may also be used with any lathe, cutting as it does, almost instantly by simply a light pressure of the handles. The cutter is circular, two inches in diameter, thus making six inches of cutting surface, and it is claimed that the low price at which it is marketed that no mechanic can afford to be without it, the list price being $2.

THE VAN BENSCHOTEN CLIPPER GRINDER.

The Patent Clipper and Surface Grinder, of which we present herewith an illustration, is a moderate priced tool placed upon the market by John Van Benschoten, 14-20 Catharine Street, Poughkeepsie, N. Y. It is constructed in

THE VAN BENSCHOTEN CLIPPER GRINDER.



such a manner as to make its operation a simple one. A depression of 3-8 inch at a 4 inch circle in the center of the stone, allows a flat 5 inches outside grinding surface, on

Digitized by Google

which clippers are held parallel, moving them laterally a trifle over the two edges while grinding, thus keeping the surface perfectly flat and true. A rigid and absolutely positive truing attachment permits of the stone being trued at will, removing all uneveness and glaze. It requires less than five minutes to grind a pair of clippers, the universal price of which is fifty cents. In sharpening, the clippers are supposed to touch on teeth and extreme back part which must set level when they will cut without any difficulty. Care should be taken to see that the emery wheel is kept absolutely true by means of emery dresser, as the slightest uneveness will prevent cutters from cutting. An emery wheel 14 inches in diameter, of special grade and construction, is furnished with each grinder and should be run at 1,400 revolutions. Pulley wheel on grinder is two inches in diameter for one inch belt. The wheel is intended to run from the point of the knives. This device can be used on any light surface, such as horse and barber clippers, meat choppers, sausage cutters, dies, plane irons, chisels, etc., etc.

HORTON GALVANIZED ROTARY WASHER NO. 9.

The Horton Mfg. Co., of Ft. Wayne, Ind., are introducing their new Galvanized Rotary Washer No. 9, illustrated herewith. This is made of black steel throughout and heavily galvanized after constructed. Its weight is considerably less than the wooden washer and the patented flywheel is so con-

THE HORTON GALVANIZED ROTARY WASHER NO. 9.

structed that it may be instantly removed when it is found necessary to move the machine about. This new Washer embodies all the virtues of any wooden washer and has the advantage of being much more durable and efficient. The manufacturers state that they have been working on it for more than a year, in building special machinery for its construction, and perfecting every detail before offering it to the trade. They make in addition to this Washer, a large line of Wooden Washers comprising all the best and most salable styles. They guarantee each machine to work properly and give satisfaction. They would be pleased to furnish catalogues and full information with prices, to interested dealers.

DOLPHIN MFG. CO.'S GAS HEATERS.

A. G. Kaufman of San Francisco, whose photograph is shown herewith, is the inventer of the "Yankee" and "Dolphin" Lightning Gas Heater, made by the Dolphin Mfg. Co. He is a graduate of Leland Stanford University, California, and of Frieburg University, Germany. For several years Mr. Kaufman was chief engineer of Siemens & Halske, Berlin. He is the inventor of the Siemens & Halske Street Car Tender, now exclusively used on the electric street cars by the German government. Mr. Kaufman is a

THE "YANKEE" HEATER.

recognized authority on the production of heat by gas. For his inventions in this line—soldering irons and Bunson burners of all kinds—the German government has given him

THE "DOLPHIN" HEATER.

medals of award at various expositions. Government shops of that country are making extensive use of his soldering irons and burners. They do away with forced draught and

A. G. KAUFMAN.

are, indeed, a revolution in gas burners. Preparations are under way for the manufacture of his various apparatus on a large scale.

RECENT TRADE PUBLICATIONS.

THE HOPKINS & ALLEN ARMS CO., Norwich, Conn., have issued a very artistic 6 leaf folder, each leaf having on it a picture of a different gun and an illustration of the use for which that particular gun is adapted, as, for instance, their No. 2012 lever action gun which has a decarbonized steel barrel, modified choke, 30 inch, 12-gauge, weighs 5½ lbs., made in 16 and 20 gauge, is accompanied with a picture of a boy taking aim at a rabbit on the run. The other side of the folder, as it is opened out, presents six colored pictures on the same principle ilustrating their revolvers and rifles. One picture is of their automatic hammer revolvers, made in 32 and 38 calibre, nickel or blued, shows a burglar with his mask and dark lantern "caught in the act" and "held up."

THE ROME MFG. CO., Rome, N. Y., are placing in the hands of their patrons a new catalogue of their nickel plated copper ware, such as tea and range kettles, tea and coffee pots; copper, brass and tin specialties, wash boilers, etc., etc. It is a very neatly arranged catalogue of 55 pages, illustrated throughout with very fine half-tones taken from photographs of the original article, and very finely printed on excellent paper. Altogether the book has about it the stamp of "high grade." The company claim that the "Rome" is the only copper tea kettle made with spout seamed solid to body and having wired ends to prevent denting in transit or in use. The body of the copper tea kettle is made from one piece of metal, tinned inside. Spout seamed solid to body and end wired to prevent jamming (which device was patented on May 17th, 1898). Bail one piece solid steel rod running through the wood. Heavy ear with handle rest, which they claim is the strongest ear made. The knob is riveted; flat bottom and swaged bodies. In shipping, these are wrapped in tissue and manila paper. Packed each in pasteboard box. One half dozen of a size to a case, the weight of which is about 35 pounds. All of the goods made by the Rome Mfg. Company are equal in quality and workmanship to the goods described above.

THE JOSEPH DIXON CRUCIBLE CO., Jersey City, N. J., have issued another of their very handsome booklets, the contents of which contain important information regarding their products. The graphite business now operated by the Dixon Company was established by Joseph Dixon, of Salem, Mass., in 1827. Beginning with the manufacture of stove polish, soon followed by the manufacture of plumbago crucibles, the business has come to include all those products in which graphite is an integral or component part. To-day the Joseph Dixon Crucible Company is the exponent of graphite knowledge and experience. They claim to be the only concern in the world which supplies graphite for every purpose for which it is used, and who handle graphite in every form in which it naturally occurs, and it handles far more graphite than any other house in the world, which consequently makes recommendations from them as to graphite and its various uses to be absolutely relied upon. The practical uses of graphite are probably as varied as any substance employed in the arts, and none of these uses is increasing more rapidly than that as a lubricating material. The purpose of the little booklet referred to above is to place in the hands of their customers a complete description of the various lubricants manufactured by them. The company state that it is their endeavor to truthfully describe these products so that the prospective buyer shall find no difficulty in making a selection to suit his particular needs.

THE ONE MINUTE CHURN CO., No. 9 Old Slip, New York, in their new catalogue, describe their One Minute Churn, which they designate "The Marvel of the Age," and claim is the only perfect milk and cream aerator in the world. It is an invention for churning butter in one minute, reducing labor, time and trouble to a minimum; producing the best grade and finest quality of butter. The construction of the churn is perfect in every detail. It is light, durable and simple to handle. All parts are carried in stock by the company and can be readily replaced. No oil or grease is necessary to lubricate the machine, thereby avoiding black streaks so common in butter manufactured by other patent churns. It is suitable for restaurants, hotels and clubs for churning sour milk and cream. The 1 gallon churn is recommended for small families, the 3 and 5 gallon churns for use on small farms. Each churn will churn about one-half of the quantity stated, the remaining space is occupied by the dasher.

SARGENT & CO., New Haven, Conn., and 149-153 Leonard Street, New York, have recently issued a large, attractive folder exploiting their food choppers, which is intended for those up-to-date dealers who handle the Gem. In connection with the above folder, an instruction booklet is sent out, giving many suggestions regarding window displays made with the Gem. Sargent & Co. are advertising the Gem extensively and creating a heavy demand for it. The pages of the booklet also contain many valuable suggestions for dealers who sell the Gem which will be to their advantage to read, as they will find in them many points they would wish to know. A point in favor of Sargent's Gem food chopper is the fact that the cutters are made of steel and cannot break. There are four cutters with each machine; for coarse, medium and fine chopping and for pulverizing. They chop in pieces of uniform size—do not mash, tear, squeeze or grind the various substances. They are made in three sizes, viz: No. 20, or small size, will chop 2 lbs. per minute; No. 22, or medium, will chop 2½ lbs. per minute, and No. 24, or large, will chop 3 lbs. per minute. A special nut butter cutter is also furnished with each Gem. Nos. 20 and 22. All of the Nos. 22 and 24 are made so that the sausage stuffer attachment can be screwed on and the Gem used for making sausages. Sargent & Co. furnish dealers who sell the Gem with advertising helps, cook books, envelope slips, show cards and electrotyped ads, all of which are described in the above-mentioned booklet, and will be found valuable mediums through which the Gem finds ready sale.

THE REED MANUFACTURING CO., Newark, N. Y., in July last issued their thirteenth annual illustrated catalogue, which has a very handsome cover heavily embossed in gold. The catalogue is devoted to Reed's patent anti-rust tinware. The company solicit inquiries and orders for each and every item contained in this catalogue on the following grounds, viz: "All the goods are absolutely as represented and up to the highest standard in every respect. The prices are and always will be as low as possible, consistent with the quality of the goods offered. Where tender are made of equal qualities for less money, you can rest assured that there is no equality." The size of their business in all its departments enables them to carry heavy stocks and to make prompt deliveries for all goods ordered. Every article of their anti-rusting tinware is guaranteed absolutely rust-proof, and in addition to this liberal warrantee protecting their customers in the handling of their line, customers have their assurance that in high-grade materials used, in skilled workmanship employed, in rigid inspection of all goods shipped, and in every particular possible, they propose to adhere strictly to their established policy that "The best is always the cheapest." The company give on the first page of their catalogue a fac-simile of their guarantee to merchants handling their anti-rust tinware. They desire to impress upon each dealer's mind the fact that they have ample capital to make this guarantee good in every instance, and replace free of cost, with new goods, such of their anti-rust ware as may be returned to the dealer rusted, which are to be retained by him for the inspection of the Reed Mfg. Co.'s representative. The catalogue is one that would be a valuable addition to the collection of any dealer, printed as it is on heavy coated paper and profusely illustrated throughout with very fine half-tones.

NEW U. M. C. PRODUCTS.

The 32 Automatic Colt Pistol is loaded with a special high power smokeless powder, giving high velocity and operating freely through the mechanism of the automatic Colt pistol (pocket model). Those with the soft point bullets will be found desirable for sporting purposes.

These cartridges are also made with metal cased bullets and are accurate for target purposes at ranges suitable to pocket pistols.

The 22 automatic rifle cartridge for the Winchester rifle (model 1903) is an inexpensive rim fire cartridge loaded with the best grade of smokeless powder. Especially adapted for small game and target practice.

U. M. C. ammunition shoots well in any make gun.

TRIBUTE TO SKILL OF OUR TOOLMAKERS.

W. H. Wakeman, in an interesting article on "Mechanics and Engineering," has this to say about the American toolmaker, whom he describes as the most skilled mechanic in the world: "When all the skill, capacity and brains utilized in the accomplishment of the mechanical results are considered, is it irrelevant to make the assertion that the genius and intelligence utilized in the inventing, developing, perfecting and manufacturing of machinery are second to none, and above most? We think not; and if any one who doubts the truth of it will stroll through a modern machine shop of the kind necessary to the production of intricate labor-saving machinery and notice the various operations which the parts used in the construction of such machinery go through, and the special tools, fixtures, appliances, arrangements, devices and machinery used for their production, we think he will change his mind and be grateful that America and Americans can boast of men who are capable of such things, for it is to such as they more than all others that we owe our commercial and industrial supremacy of to-day. The great changes in the last century which have contributed to the uplifting and betterment of the human race are marked by the achievements of men whose whole lives and energies have been devoted to the perfection and production of things mechanical. This genius of invention which has conceived, developed and made possible the manufacture of labor-saving machinery has multiplied and improved the necessaries as well as the luxuries of life.

"We are known and acknowledged to-day as the greatest world power," says Mr. Wakeman. "What has made us so? It is to those who have developed and perfected our modern manufacturing industries that we owe the most. It is because we can view with equanimity the striving of other nations to outdo us; because we can go out into the markets of the world and meet and overcome their competition, that we are what we are. And how has this come about? Simply through the great inventive ability and ingenuity of American engineers and mechanics. Thus has the production of all articles and necessaries of commerce been cheapened and multiplied. Go into the drawing, construction or tool department of any of the large machine establishments and note the men employed therein. They will be found to bear favorable comparison with those engaged in any of the other arts or professions. What is more, these men do not stand still, but keep increasing their knowledge, and thus step higher and higher to positions to which their ambition and capacities entitle them. From the ranks of such men come the best of our inventors of machinery, our superintendents and managers."

MILLIONS IN ILLEGAL ADVERTISING.

The disclosure was made in the recent annual statement by the Metropolitan Traction Company, of New York City, that the privilege of advertising in its cars yields it the enormous annual revenue of nearly a quarter of a million dollars. Every dollar of this advertising is diverted from legitimate publications such as the daily papers, the magazines, and weekly journals, and every dollar of it is illegal advertising, because the charter of the Metropolitan Traction Company does not give it the privilege to sell merchandise, advertising, or anything else on its cars. It only confers the privilege of conveying passengers and freight. If the publishers would take up this matter, as they should, with the proper authorities, they could compel the local traction companies of New York City to remove their advertising signs, and the same compulsion could be applied, we believe, in every other city in the country. The use of the space in street cars for advertising purposes is not only illegal, but it is also, in many instances, a nuisance. The space might much better be devoted to posters giving information regarding fares, routes, and so forth—information to which the passengers are justly entitled, and which they frequently find it difficult to obtain.—*Leslie's Weekly.*

REVIEW OF THE MARKETS.

WIRE NAILS. A steady trade is being continued but not large in volume as it is confined to filling in deficiencies in stock. The market is held at quotations ruling for some time, as follows: f.o.b. Pittsburgh, 60 days, or 2 per cent. discount for cash in 10 days:

Jobbers, carload lots	$2.00
Retailers, carload lots	2.05
Retailers, less than carload lots	2.15

New York. There is still a fair movement in the local market and immediate vicinity. Quotations as follows:

Single carloads	$2.20
Small lots from store	$2.25 to $2.30

CUT NAILS. Since the reduction in price the market for Cut Nails has been firmly held at quotations agreed upon, not many large orders being in evidence. Quotations are as follows:

In carload lots	$1.90 base
Less than carload lots	$1.95

f.o.b. Pittsburgh, plus freight in Tube Rate Book to point of destination; terms, 60 days, less 2 per cent. off in 10 days.

New York. By the recent reduction in prices, quotations in the local market have been changed as follows:

New York. The local market is without any special feature, demand for small lots being steady. Quotations are as follows:

Carloads on dock	$2.04½
Less than carloads on dock	2.12½
Small lots from store	2.20

BARB WIRE. No very heavy orders are noted, the demand being mostly for limited quantities. The regular quotations remain as previously given, as follows: f.o.b. Pittsburgh, 60 days, or 2 per cent. discount for cash in 10 days:

	Painted.	Galv.
Jobbers, carload lots	$2.30	$2.60
Retailers, carload lots	2.35	2.65
Retailers, less than carload lots	2.45	2.75

SMOOTH FENCE WIRE. The mills report a satisfactory business being done in this line, with the prospect of a continuance. Quotations remain as follows: f.o.b. Pittsburgh, terms 60 days, or 2 per cent. discount for cash in 10 days:

Jobbers, carloads	$1.90
Retailers, carloads	1.95
Less than carloads	2.05

The above prices are for base numbers, 6 to 9. The other numbers of Plain and Galvanized Wire take the usual advances, as follows:

	Plain.	Galv.
6 to 9	Base.	$0.30
10	Advance over base	$0.10 .30
11	" " "	.10 .30
12 and 12½	" " "	.15 .30
13	" " "	.25 .30
14	" " "	.35 .30
15	" " "	.45 .60
16	" " "	.55 .60
17	" " "	.70 1.00

SHEET ZINC. Under date of November 9 Matthiessen & Hegeler Zinc Company, La Salle, Ill., issue a circular announcing $6.50 as the price of Sheet Zinc in 600-pound casks, subject to the usual discounts in quantities.

BLACKSMITHS' VISES. The understanding which for some time has existed among the manufacturers of Blacksmiths' Vises has recently terminated, and the market on this line of goods is now an open one. As a result of this, and of the reduced cost of the raw materials lower quotations are being given.

SEAMLESS BRASS TUBES. Under date, November, 2 a reduction in the price of Seamless Brass Tubes was made by the manufacturers, the base price being put at 18 cents per pound.

CORDAGE. The demand for rope is slackening up as usual for the season. The following prices represent the market:

Pure Manila, 7-16 inch and larger	12
⅜ inch	12½
¼ inch and 5-16	13
Pure Sisal, 7-16 inch and larger	9½
No. 2 Sisal, 7-16 inch and larger	8½
⅜ inch	9
¼ inch and 5-16 inch	9½
Lath Yarn, Medium and Coarse	8½
Jute Rope, No. 1	6½
No. 2	6

LINSEED OIL. Under date of October 30th the following quotations on "City" Raw Oil are those announced by the Dean Linseed Oil Co.:

In lots of less than 5 barrels...38 cents per gallon.
In lots of 5 barrels or more....37 cents per gallon.

The "American" brand for respective quantites, 2 cents per gallon less.

The five barrel price applies only to deliveries of that quantity at one time.

Boiled Linseed Oil, 2 cents per gallon higher than Raw.
Calcutta Oil .....65 cents per gallon.

THE PHILADELPHIA TRADE.

Business continues in very fair volume and is very closely up to last year's record, which is all the more surprising as the last two months of 1902 showed a most exceptional volume of business. So far the declines in price have been mostly on paper, and the average trade report has pictured the market as much worse than it really is, for while it is true that some goods close to the raw material show a tendency towards weakness, still on the other hand we hear of occasional advances and manufacturers are still complaining that the reductions have so far benefited them but little. Cut Nails have been marked down somewhat, but Wire Nails show very little variation, and with the exception of Bolts and Heavy Hammers prices show a small degree of change. The general condition of the country continues good, and the shrinkage is so far effecting the well-to-do, while the general conditions of the country have been untouched. The production of iron and steel is being largely curtailed, and this is, of course, apt to have a beneficial effect upon the market. There is some dragging in collections which perhaps are not so good as they should be at this time of the year. With money coming in from crops and the sale of holiday goods there should be a larger volume of ready money, and the sharp change in the weather will probably do much to improve the situation. BIDDLE HARDWARE CO.

THE CLEVELAND TRADE.

As education culture and civilization advances, the tendency towards extremes is lessened. The process is slow as race education on all lines is, but it has made some progress in the last decade. Competition became so piratical by some of the leading manufacturers that co-operation was impossible and combination seemed the only relief. Over-capitalization of constituent companies seemed essential to its accomplishment. We are now realizing the evils of this and charging it to combinations. That combinations on a fair basis at conservative values and managed by upright men would be a public benefit has been demonstrated. One of the most disastrous booms with its natural results has been avoided by the Steel Trust, and we have been saved from an old-time panic with the added impetus of the over-capitalization. The success of the steel trust induced the attempt to organize many others, and over-capitalization, rather than benefit of combination, came to be the purpose, so that an incident in promoting is causing condemnation of combina-

Digitized by Google

tions. To destroy combinations by legislation would be asking to burning a house to get rid of cockroaches, and the public good will be subserved and business ethics promoted by combinations is already made apparent. The next ten years will increase the evidence of this.

The serious mistake of over-capitalization will not be repeated, but combinations will continue to be made, as notwithstanding its incident evils, its benefits will remain when these are forgotten. It would be difficult to estimate the benefit of preventing panics, or of modifying their effect to prevent disaster. Large, strong manufacturing firms are more essential for this than large banks or trust companies. If the steel company had been organized on a conservative basis, it would have been an unquestioned benefit, and this would have saved us from the disastrous organizations that followed. This suggests a simple remedy by making it a crime to willfully deceive the public for personal benefit.

The Lockwood-Taylor Hardware Co.

THE PITTSBURGH TRADE.

In Hardware jobbing circles, the event of this week, Nov. 16-21, is the convention at Atlantic City. The attendance is large and there is much of interest to discuss. The manufacturers' convention at the same time is of advantage to both manufacturer and jobber, as it gives opportunity for a free interchange of ideas regarding the marketing of products to the best advantage of all concerned. The weather has been remarkably fine up to this writing, and while it has been good for corn and cotton, has retarded the demand for rough and cold weather goods. There is a very fine trade moving, however, and while the latter months of 1903 may show some falling off in amount of business, the year will close about equal to 1902.

Logan-Gregg Hardware Co.

THE SAGINAW TRADE.

The past three weeks we have been favored with very seasonable weather which has had a very good effect on Fall trade. Sugar beets have been harvested and the crop is better than was expected. The farmers are beginning to receive their payments, which in the aggregate amount to several million dollars each Fall; this always has a good effect on local business. The volume of business compared with last year seems to be holding up wonderfully well. The unsettled condition of the market on staples appears to be felt very little in other lines and does not effect the buying public to any noticeable extent. It is our opinion that stocks are very light through this section of the country and, with anything like a normal Spring business, there is apt to be considerable trouble on account of delayed shipments and scarcity of goods.

Morley Brothers.

THE CHICAGO TRADE.

Notwithstanding the drop in prices of steel billets, steel sheets, etc., customers seem to be taking about the usual quantity of goods for this season of the year; even in a staple article like wire nails, the demand is excellent so that it has been necessary occasionally to back order a size. On barb and plain wire trade is a little less brisk. On scoops, shovels, stove boards, coal hods, husking gloves, stove pipe, and other Fall and Winter goods business is first class, prices fairly well maintained; and on cutlery our salsemen are having a good trade. Collections are good, with fewer failures than a year ago. We look for a good season in Winter goods, especially so in skates, as our stock is already practically sold except some of the cheaper grades.

Wells & Nellegar Co.

THE DAVENPORT TRADE.

This week the wholesale Hardware dealers are divided into two classes, those who go to Atlantic City and those who stay at home. Those who go will have the most fun, but they will also have to bear greater responsibilities. Those who remain will toil in the old treadmill of routine work that has been mapped out for them for years, working hard to sell goods at two and a half to ten per cent. profit, knowing full well that their expenses for making these sales are far in excess of the profits they obtain.

NICHOLSON FILE COMPANY
GENERAL OFFICES: PROVIDENCE, R. I., U. S. A.

MANUFACTURERS OF
FILES AND RASPS
NICHOLSON, KEARNEY & FOOT, ARCADE, AMERICAN, GREAT WESTERN, McCLELLAN, EAGLE, J. B. SMITH, "X. F.", GOLD MEDAL.

In Atlantic City they will endeavor to formulate some plan of leaving the paths their fathers trod and find some way to sell each article for a little more than cost, including the expense of selling same. Will they succeed? We hope they may. The solution of this problem has been studied for "Lo! these many years," the representatives attending local, State and National Hardware conventions have worked hard to this end, in and out of season, worked persistently, vigorously, enthusiastically and unselfishly for the common good of the members of these fraternal organizations. They have accomplished much in the way of better acquaintace, one with the other, and consequently have brought about a more friendly feeling. Through the means afforded by these conventions, they have been brought into personal contact with the manufacturers, from whom they buy and have met in conventions assembled the retail dealers, to whom they sell. So far, and in this way, much has been accomplished.

If the foregoing conclusions are correct, are not conditions ripe, now, for one more step forward and in some way to adopt some methods of making a little money? As making money is, after all, what Hardware jobbers, as well as other mortals are working for. The present profits in jobbing Hardware are too small. Now, Mr. Hardware Jobber, large or small, may we ask you if this is not true? You have made money. How have you made it? Simply by speculation. The great bulk of your fortunes have been made in a few, very few, indeed, isolated years, of the many that you have been in business; those years were when the markets advanced suddenly and you reaped the benefit of these advances. Well, admitting all this, what can be done about it? The delegates in Atlantic City this week will possibly answer. We can not. In reading a book of travel to-day, we found the following from Constantinople, which impressed us as an object lesson. It reads: "The dogs of Stamboul! They are here in force. They have their mission and seem to know it. They are not so poor and rough of coat as writers sometimes tell, but are rather jolly, knowing whelps, that have an eye for *business*. They have their own ranches to themselves. A half a dozen curs or so own so much of a street—forty rods, perhaps—and woe to any trespasser that dares to hunt a crumb on their preserves. If a stranger dog appears at either end, the alarm is sounded straight. Every sleeper jumps up with a *business* snap and in a bunch they make a dash upon the intruder. If he retreats, all right. If he lingers too long, it will take him some time to count the holes in his skin." Now it strikes us that this is a "dog-gone" good idea for our delegates at Atlantic City to consider. Could we not secure more crumbs in our own legitimate territory and let the other fellow do likewise?

SICKELS, PRESTON & NUTTING CO.

THE CINCINNATI TRADE.

Under existing conditions trade is surprisingly healthy, sales keeping up beyond the average. The goods, however, ordinarily selling at this time of the year for Spring consumption are not being sought in desirable quantities. The action of the Steel Trust is accountable for this backward tendency. Even though prices are guaranteed, dealers seem afraid to buy. Wire cloth is about the only thing that is meeting with any very great demand. The jobbers all report that it will be difficult at this time to make any positive statement as to how the market will be next month, but it cannot be said to be encouraging. The unsettled condition of labor in Chicago has caused a number of manufacturers to enter into negotiations for the locating of their plants in the suburbs of Cincinnati, claiming this city to be freer from strike disturbances. The Pike Mfg. Co., of Pike, N. H., was represented here by their regular traveling salesman as well as by a member of the firm, Mr. E. Bertram Pike. The jobbing trade contributed a bunch of good orders for next year. Pickering's weekly specialty sales seem to be producing results they anticipated. They draw people who would not go to the store for articles which could be obtained nearer to their own homes, but which they buy when attracted by these special articles offered.

The Newport Rolling Mill asked consent of the Amalgamated Iron, Tin and Steel Workers to reduce wages twenty-five per cent. in the scale of wages as now paid, and to permit open tonnage. Col. J. A. Andrews, president of the company, stated that unless the reduction is consented to, the mill will be obliged to shut down from Dec. 15th indefinitely owing to the demoralized condition of the iron and steel market. It is impossible, Col. Andrews says, to compete longer with the mills controlled by the Steel Trust.

CINCINNATI TRADE ASSOCIATION.

THE COLUMBUS TRADE.

There is no dropping off in trade so far, but the weather has not been right for retailers to dispose of Fall goods such as horse blankets, robes, stoves, etc. We think reorders on such goods will be light on account of the pleasant weather. We have found that when dealers have stock enough to carry them well along in the season, they will often lose sales rather than buy more, while if the season is favorable and their stock becomes broken early, they will reorder liberally. We have been favored with light rains during the past week which is going to help in many ways. It has been so dry, farmers could not husk corn with any satisfaction. Wheat and pastures were suffering. From personal observation during the past week while hunting Bob Whites, I found the corn crop to be an average crop in quantity and much better quality than last year. The hay crop was excellent both in quality and tonnage. Taking all in all, the farmer has had a good year and is getting good prices, corn bringing 50 cents a bushel delivered direct from the field. Corn is vastly more plentiful than Bob Whites. The rabbit crop is good, but they seem to have caught the two minute trotting fever and go at a record breaking speed; but they are poor, dry meat anyway. Orders for Spring goods are being placed with some conservatism as many dealers think there is more chance of declines than advances. However, there is no reason for not placing orders for their legitimate wants as it is one sided anyway, as prices must be guaranteed up to date of shipment and they are more likely to have the goods in time for early trade. There is no denying the fact that the dealer who has his goods on hand when the first demand is

Digitized by Google

STANLEY RULE & LEVEL CO.

NEW BRITAIN, CONN., U. S. A.

Improved Carpenters' Tools.

SOLD BY ALL HARDWARE DEALERS.

made, gets the cream of the business. If a customer knows he will need some article and happens to see it he is liable to buy, even if it should be a month before he can use it. Prices on some goods that have been too high are settling down to where they belong, while articles that have been low have advanced. We think prices will average up about where they were last invoice, and we see no reason for demoralization of prices for next year. The business of the country is in a healthy condition and there will no doubt be a good demand for goods. The Smith Bros. Hardware Co.

J. H. Smith.

THE MINNEAPOLIS TRADE.

With us business is continuing fairly good. On the whole a little ahead of last year, although we appreciate the fact that dealers in nearly all lines are complaining. There seems to be a little let down in the price of some lines, but prices here on the whole are being fairly well maintained. Collections are a little slow. W. K. Morison & Co.

CARBONS AND HYDROCARBONS.

Natural gas and oil are hydrocarbons which are supposed to have resulted from the decomposition of coal beds in the earth. All hydrocarbons ignite comparatively readily, but fixed carbons exist sometimes in forms which burn only at comparatively high temperatures. The diamond is a form of pure carbon which requires a very high temperature for its ignition. Graphite is another carbon which is so difficult to consume that crucibles are made of it. Retort carbon obtained in the process of making illuminating gas is used for making carbons for arc lamps, where it is slowly consumed at the high temperature of the electric arc, but the fireman who tries to burn a few of these carbons in his furnace will find the sticks of carbon among the ash practically unchanged, the temperature of the furnace having been entirely insufficient to dispose of them.—*The National Engineer.*

Notice on the following pages a few groups of Hardware showing some of the Artistic Designs manufactured at our New Haven works.

Hardware Dealers

should be especially interested in these fine goods because they afford a profit to the dealer, satisfy the user, and they are not extravagant in price.

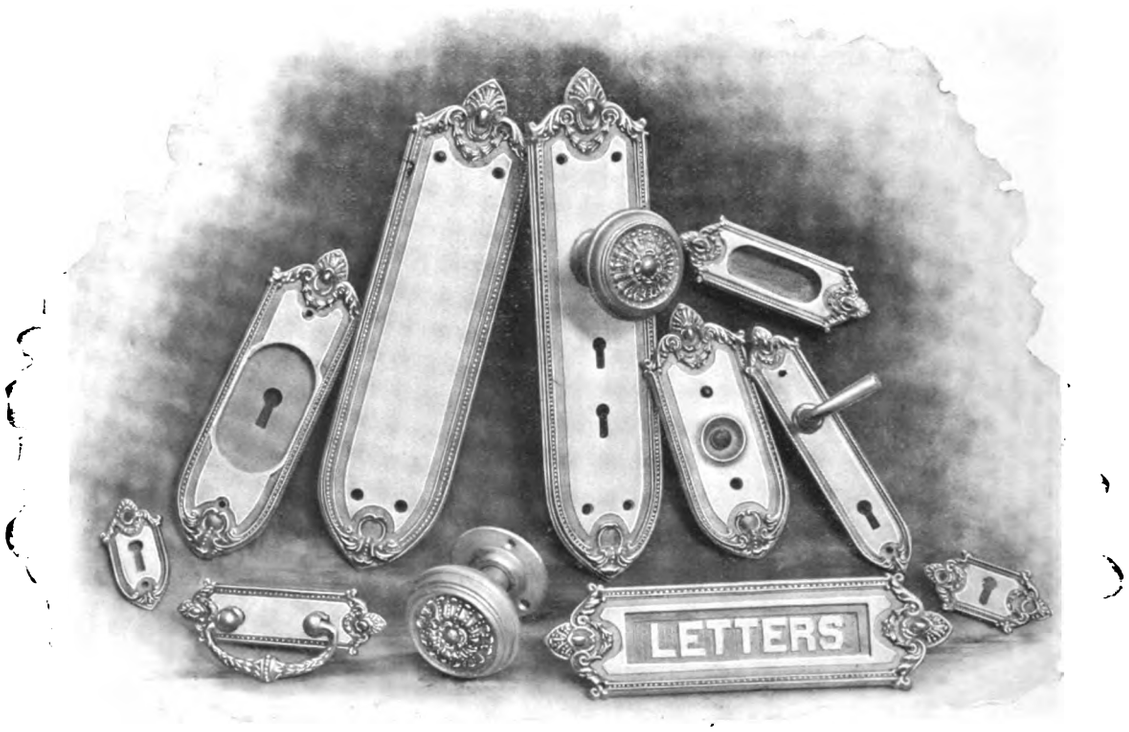
Y—YGRANDE DESIGN (LOUIS XIV). SARGENT'S ARTISTIC HARDWARE.

Sell profitable goods.

Steer your customers away from the cheap competitive goods which have to be sold at competitive prices—you can do it—and call their attention to Sargent's Artistic Hardware, which can be sold at prices allowing a good profit for your trouble, and which will also prove satisfactory to your customers and be economical as well. In "Our Little Red Book," which circulates largely among those who intend to build, we say: "The Hardware is but a very small item in the whole cost of a building, even if the very best is used; the difference in cost between good locks and poor locks is so little that an owner would not consider it a saving to use poor locks if the matter was brought to his attention." This matter should be brought to the attention of builders by the Hardwareman. It is important to the builder, and after the Hardware is on the building, if it is the satisfaction-giving kind, the dealer will be thanked for his advice. Some dealers attempt to substitute other makes for Sargent's, claiming that they are "just as good." That is poor business; the customer may buy the substitute goods, but there remains with him the feeling that advantage has been taken of him, and he always has an idea that the goods he purchased are not giving the same satisfaction as Sargent's.

Your advice will be appreciated

Our Easy Spring Locks and Artistic Hardware have been advertised very extensively during recent years, and as a result builders have a more general knowledge of what is good in Hardware. Sargent's Hardware is favorably known; it gives satisfaction wherever used, and such satisfaction extends its popularity—a pleased customer is the best kind of an advertisement, and our advertising helps our customers as well as ourselves.



Favorably known. Gives satisfaction.

THE NATIONAL HARDWARE ASSOCIATION.

NINTH ANNUAL CONVENTION

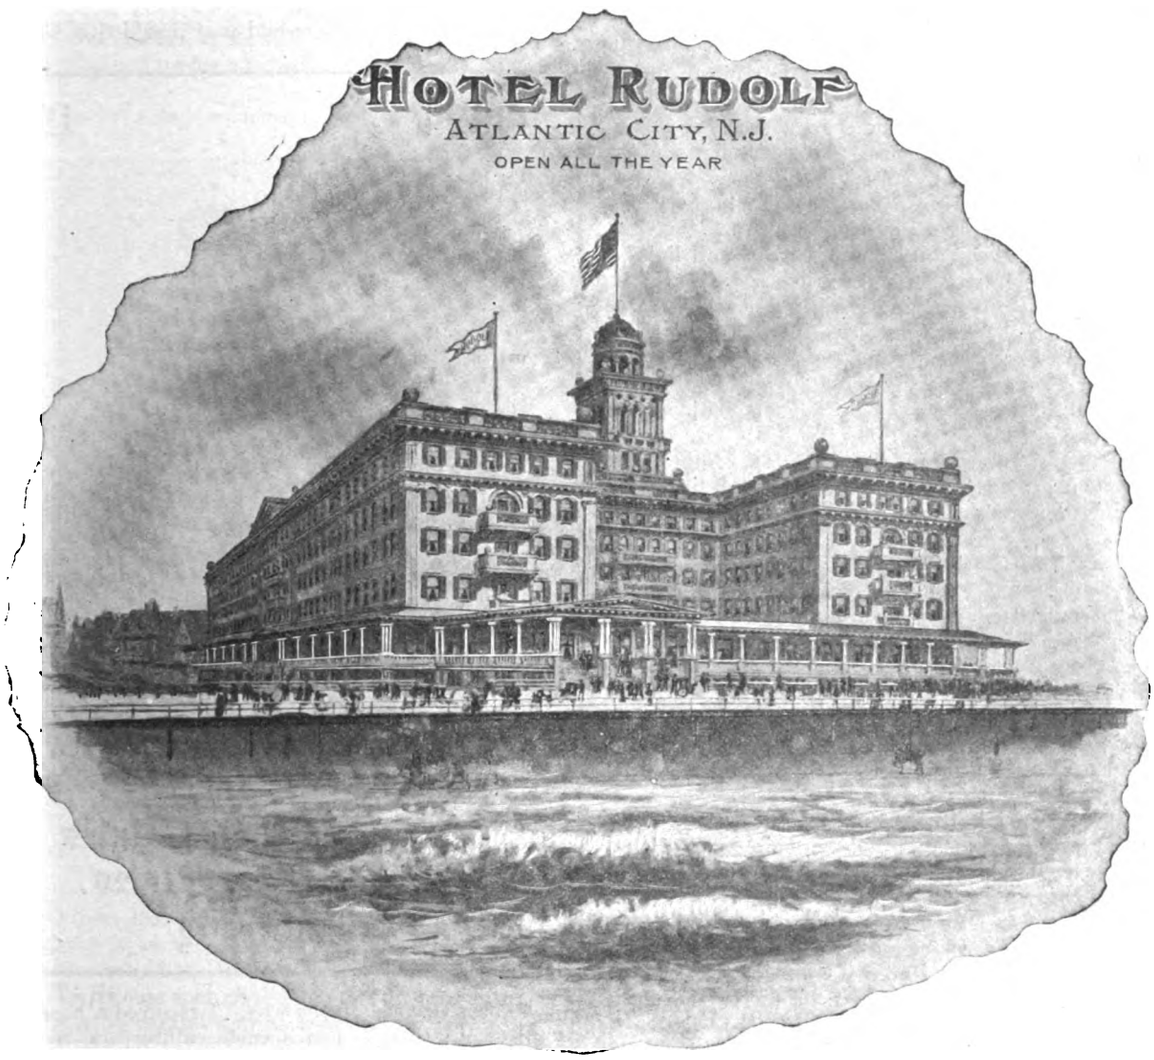
LIST OF OFFICERS AND COMMITTEES.

Following are the officers and members of committees of the National Hardware Association:

PRESIDENT.

R. A. Kirk, Farwell, Ozmun, Kirk & Co., St. Paul.

FIRST VICE-PRESIDENT.



John C. Koch, John Pritzlaff Hardware Company, Milwaukee.

SECOND VICE-PRESIDENT.

Brace Hayden, Dunham, Carrigan & Hayden Company, San Francisco.

SECRETARY-TREASURER.

T. James Fernley, Philadelphia.

EXECUTIVE COMMITTEE.

Samuel A. Bigelow, Bigelow & Dowse Company, Boston.
P. E. Strauss, Fitz, Dana & Co., Boston.
J. D. Moore, Moore & Handley Hardware Company, Birmingham, Ala.
R. M. Dudley, Gray-Dudley Hardware Company, Nashville.
W. S. Wright, Wright & Wilhelmy Company, Omaha.
John Freeman, Freeman Delamater & Co., Detroit.

ADVISORY BOARD (Composed of former presidents).

William W. Supplee, Supplee Hardware Company, Philadelphia.
H. H. Bishop, McIntosh Hardware Corporation, Cleveland.
John Bindley, Bindley Hardware Company, Pittsburgh.

MEMBERSHIP COMMITTEE.

A. D. Clinch, chairman, Underhill, Clinch & Co., New York.
A. C. Rulofson, Baker & Hamilton, San Francisco.
Col. John Conover, Richards & Conover Hardware Company, Kansas City, Mo.
George E. King, King Hardware Company, Atlanta, Ga.
William Chamberlain, Emery-Waterhouse Company, Portland, Maine.
F. A. Heitmann, J. W. Heitmann Company, Houston, Texas.
A. J. Bihler, Jas. C. Lindsay Hardware Company, Pittsburgh.

TRANSPORTATION COMMITTEE.

George B. Logan, chairman, Logan-Gregg Hardware Company, Pittsburgh.
Cortland Van Camp, Van Camp Hardware & Iron Company, Indianapolis.
George Tritch, Jr., George Tritch Hardware Company, Denver.
W. R. Wheeler, Holbrook, Merrill & Stetson, San Francisco.
H. L. Doten, Austin & Doten, Boston.
J. A. Warner, Wyeth Hardware & Mfg. Company, St. Joseph, Mo.
F. W. Hurty, Farwell, Ozmun, Kirk & Co., St. Paul.

ENTERTAINMENT COMMITTEE.

T. James Fernley, chairman, *exofficio*, Philadelphia.
Col. B. F. Eshelman, Stauffer, Eshelman & Co., New Orleans.
Edmund W. Wunder, James M. Vance & Co., Philadelphia.
Hobart Weed, Weed & Co., Buffalo.
James S. Bonbright, Supplee Hardware Company, Philadelphia.
James H. Ritter, Biddle Hardware Co., Philadelphia.
John R. Griffith, Shields & Brother, Philadelphia.

GRIEVANCE COMMITTEE.

Wm. M. Glass, chairman, Lee-Glass-Andreesen Hardware Company, Omaha.
G. R. Vaughan, Barney-Cavanaugh Hardware Company, Mobile, Ala.
James R. Fones, Fones Bros. Hardware Company, Little Rock, Ark.
A. H. Decatur, Baldwin, Robbins & Co., Boston.
W. H. Robertson, Corbett, Failing & Robertson, Portland, Ore.
Felix Bahlmann, Kruse & Bahlmann Hardware Company, Cincinnati.
W. S. Donnan, W. S. Donnan Hardware Company, Richmond, Va.

PRESS COMMITTEE.

Geo. Braun, chairman, Bostwick, Braun & Co., Toledo, Ohio.
Capt. F. Barker, Barker Rose & Clinton Company, Elmira, N. Y.
E. W. Morley, Morley Brothers, Saginaw, Mich.
George W. Herrick, Holder & Herrick, Boston, Mass.
A. B. Palmer, Palmer Hardware Company, Savannah, Ga.,
W. H. Harwi, A. J. Harwi Hardware Company, Atchison, Kan.
O. L. Davis, Smith Brothers Hardware Company, Columbus, Ohio.

FRATERNAL RELATIONS COMMITTEE.

A. L. Scott, chairman, Pacific Hardware & Steel Company, San Francisco.
Chas. H. Turner, Albany Hardware & Iron Company, Albany, N. Y.
H. F. Chorley, W. H. & G. W. Allen, Philadelphia.
C. A. Knapp, Knapp & Spencer Company, Sioux City, Iowa.
A. M. Wiley, Frye, Phipps & Co., Boston.
O. B. Barker, Barker-Jennings Hardware Company, Lynchburg, Va.
C. F. Bragg, N. H. Bragg & Son, Bangor, Maine.

METAL COMMITTEE.

A. J. McKee, chairman, Merchant & Co., Philadelphia.
Wm. T. Gummey, Gummey, McFarland & Co., Boston.
H. W. Waite, Waite, Ranler & Co., Boston.
Col. B. F. Eshleman, Stauffer, Eshleman & Co., New Orleans.
H. H. Rudd, Geo. Worthington Company, Cleveland.
J. P. Townley, Townley Metal & Hardware Company, Kansas City, Mo.
T. G. Walther, Hackett, Walther & Gates Hardware Company, St. Paul.

HEAVY HARDWARE COMMITTEE.

Col. R. S. Woodruff, chairman, C. S. Mersick & Co., New Haven.
A. C. Harvey, the A. C. Harvey Company, Boston.
Gen. C. Whitney Tillinghast, J. M. Warren & Co., Troy, N. Y.
John C. Koch, John Pritzlaff Hardware Company, Milwaukee.
Col. P. P. Beals, Beals & Co., Buffalo.
Irving D. Booth, Irving D. Booth, Elmira, N. Y.
D. H. Kane, Pacific Hardware & Steel Company, San Francisco.

Digitized by Google

The largest meeting ever held by the National Hardware Association and the American Hardware Manufacturers' Association convened at Atlantic City on Wednesday, November 18.

As early as Tuesday the delegates and visitors began to arrive at the Rudolph in large numbers and by evening the lobby of the hotel was crowded with as happy a lot of hand shaking Hardwaremen as one could wish for. Bad weather seemed to have had no contrary effect on the determination of the members of both associations to make this the Banner Convention.

Good Business.

Notwithstanding the pessimistic reports and rumors which have been pervading the business atmosphere surrounding the Hardware trade in some quarters for the past month or two, every one seemed satisfied with present conditions and optimistic as to the future.

Many of the manufacturers reported that they were still receiving orders in sufficient numbers to keep their factories running full time and not a few reported that they were several months behind orders. In some cases a dropping off in orders has occurred during the past few weeks but almost invariably those manufacturers stated that they were continuing to run full time to make up stock for January orders. As one manufacturer expressed himself: "My travelling men report that the retail stores are nearly all lightly stocked and in their opinion as soon as prices become a little more settled they will want their goods all in a heap."

Travellers in the West and South are in such a prosperous condition that there could be no logical reason for expecting anything but good business in the early part of 1904. Taken altogether the pessimist was entirely out of place at Atlantic City last week.

The Hotel Rudolph accommodated nearly all of the visitors and the management of that famous hostelry is to be congratulated on the way the conventions were entertained.

THE CHICAGO SPECIAL.

On Monday afternoon, 16th inst., a special train of delegates and visitors started from Chicago for Atlantic City going via the Lake Shore to Buffalo and from thence to Philadelphia over the Lehigh Valley route. The train was made up of eight Pullman cars, two of which were diners and was for the exclusive use of delegates to the conventions. The observation car in the rear was assigned to the ladies of the party. A smoking and buffet car was provided for the gentlemen. From various causes the train was delayed west of Buffalo over an hour, but after reaching the rails of the Lehigh the time was quickly made up. In spite of the drizzling rain the splendid scenery along the Lehigh Valley line was thoroughly enjoyed by the party. The recent heavy rains had swelled the mountain torrents, which gave additional interest to this rugged region.

At 12.30 P. M., Tuesday, a dinner was served in the dining cars, tendered by the manufacturers.

At Philadelphia the party was joined by the celebrated Ringgold Band, of Reading, Penn., which furnished music for the balance of the journey. Atlantic City was reached in time for dinner, the party making their headquarters at the Hotel Rudolf.

Wednesday Morning Session, Nov. 18.

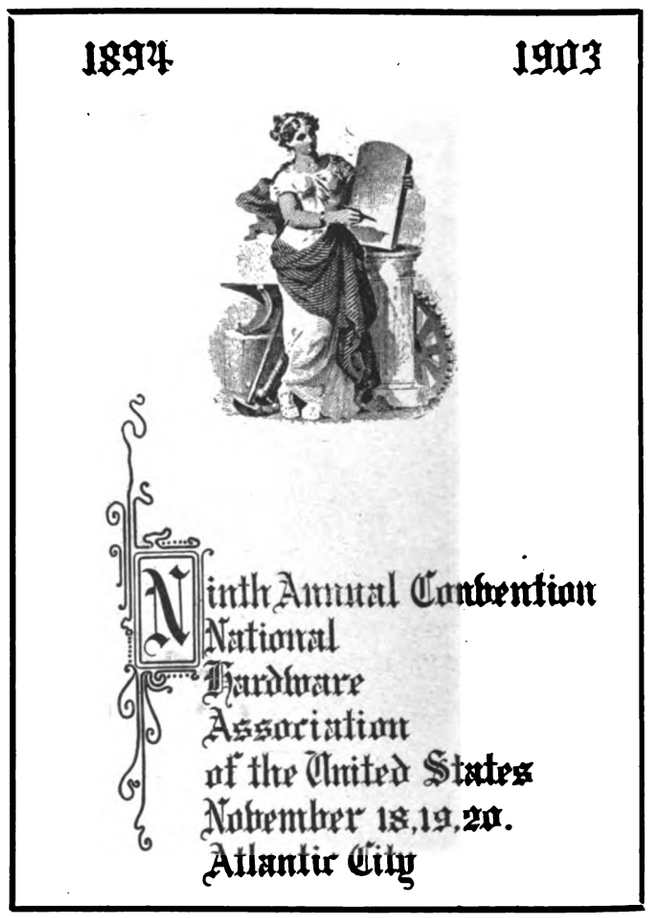
This session was open to manufacturers, members of the press and ladies and was called to order by President Kirk at 10 a. m.

The programme opened with the singing of "America," lead by Mr. Hobart Weed.

President Kirk then welcomed the conventioners with the following well chosen remarks:

Members of the National Hardware Association, ladies and gentlemen:

It is a particular pleasure that we meet here with you this morning. We are sure that we will find this place peculiarly adapted to the wants of our convention. We feel sure that from the beginning we can anticipate that this meeting will be a very profitable one for us all. We are very glad this morning to have with us the American Manufacturers' Association and also by no means less having so many ladies present with us in this opening meeting. (Applause). We shall have the exercises of the morning curtailed as much as possible owing to the delay in our beginning which was unavoidable.



Rev. Dr. John R. Davies of the Bethlehem Presbyterian Church of Philadelphia was then introduced and invoked the divine blessing.

President Kirk then introduced the officers of the Canadian Wholesale Hardware Association and Mr. John Bowman of London, Canada, addressed the meeting as follows:

ADDRESS OF JOHN BOWMAN.

Mr. President, ladies and gentlemen:

I see that you are subject this morning to some disappointments in your speakers. Our Canadian delegates seem to have been delayed. We expected a goodly delegation of five or six members—presidents and past presidents. They seem

to have been delayed on the way. I received a message from our president that he had a cable calling him to England, that he would not be able to be present at the convention and present you with a formal address, and he asked me to make a few remarks. Therefore, anything which I may have to say, Mr. President and ladies and gentlemen, will be of an informal character.

I notice that you have the ladies here largely in evidence, this is rather embarrassing to us business men who are not used to expressing ourselves on trade matters, at least for the ladies, but I judge that the ladies here take a most decided interest in all things, that they are

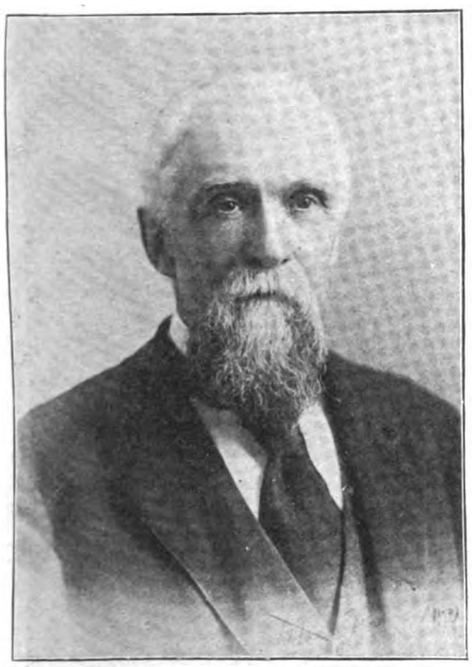
RULERS NOT ONLY IN THE HOUSE BUT IN BUSINESS.

(Laughter). I am sure that we are deeply indebted to your officers and to your secretary for the courtesies you have extended to the representatives of the wholesale Hardware Association of Canada from time to time. You have received us most cordially and our presidents who have been here in years before it is impossible now to keep them away, and they will be here sure, although it may be a little late.

However, perhaps the only note of regret that I would give expression to in addressing you, is that we have not had a goodly delegation yet from the National Hardware As-

Digitized by Google

sociation of America to visit our association during the convention in Canada, and I desire, Mr. President, now to extend a most cordial invitation to you and your delegates to be with us at our next Annual Convention.



Now that

THE BOUNDARY LINE BETWEEN THE TWO COUNTRIES

seems to be pretty well settled (laughter) you can go there without any danger of going astray. I, for one, feel sure while there you will always feel at home and there will be no danger then of an "Alaskin Chill." (Laughter). Now your worthy president has intimated that your time is already partially gone, and I hardly know how in the brief time to deal with the various questions, perhaps, that might be of interest to you.

Our Canadian Association has now entered upon its sixth year association. We have been guided by your experience, and the reports brought back from time to time by our delegates and the reports in the different trade journals, and we are working along pretty much the same lines as you are pursuing.

We have the same problems to deal with that you have.

R. A. KIRK,
PRESIDENT.

Our association has not grown in numbers. We have desired to make it as exclusive as possible. It is difficult to become a member of the Wholesale Hardware Association of Canada. To become such the jobber has to have an excellent standing, a good capital and a large staff of travelling men —to be doing what we might call an exclusive jobbing business. We find that by this policy

ALL THE LEADING JOBBING HOUSES ARE VERY ANXIOUS TO JOIN OUR ASSOCIATION,

and I think I am safe in saying that every jobbing house of any standing, or doing any considerable business, in Canada is associated with the Wholesale Hardware Association of Canada.

Probably the most serious problem we have to deal with in Canada is the relation between the manufacturer, the jobber and the retailer. We have always desired as jobbers that the manufacturers whose goods we distribute to enjoy a liberal profit. We have not made any movement whatever to reduce their profit, but rather to give them such a profit that will be satisfactory with handling their goods through a distributor—the jobber. The jobber, however, desired also fairly liberal profits. You know we want to live, and so by arranging with the manufacturers prices were fixed for the retail trade. We find that as time passes that the manufacturer becomes more eager for a double profit. He seeks more earnestly after the retail trade. He increases the number of his travellers and he adopts methods of rapidly reaching the trade by quoting new prices and gathering up the better part of it and leaving the fragments for the jobber. I don't know whether you experience this in your association, but it is becoming a serious—a very serious thought—with us, and I think we are rapidly approaching the position that the manufacturer of goods

MUST BE HANDLED EXCLUSIVELY BY THE JOBBER

—the manufacturer must call off his travelling men to the retail trade. I don't know how that would apply to you, or whether you consider it to be practicable.

Another question I will suggest as of some trouble is the term of credit. We endeavored to reduce our terms of credit to the same terms as arranged by your association, but we found it met with a great deal of opposition and it was deemed unwise to so construct it; so we reduced our terms to two off, 30 days or 90 days. Now we have a difficulty arising with our government. The minister of customs takes the ground that our duties are fixed on what might be termed a credit basis, and it may be of interest to the manufacturers of the United States to know that on an invoice coming to the Canadian jobber lately 2 off 10 days—30 days that our government has advanced the valuation 5

JOHN C. KOCH,
VICE-PRESIDENT.

per cent., claiming that these goods are all invoiced on a cash basis, whereas the duties of the country are fixed upon a credit basis. So I simply make this suggestion to the manufacturers or jobbers to change their invoices and make them read 2 off 10 days—60 days. I think that will overcome the difficulty.

Mr. President, perhaps I am taking up too much of the time of your convention, but our outlook in Canada we consider to be most excellent. We have no fear whatever of depression—of trade depression.

THE COUNTRY IS MAKING MOST WONDERFUL STRIDES.

Our exports from the year 1893 to the year 1903 increased from $118,000,000 to $214,000,000, an increase in ten years of 81 4-10 per cent. Our total trade last year was some $467,000,000, an increase over the previous year of $43,000,000. Our population is now between five and six millions. I think the record of our bank deposits is something marvelous. We have on deposit $460,000,000. Our foreign trade being $79.00 per capita.

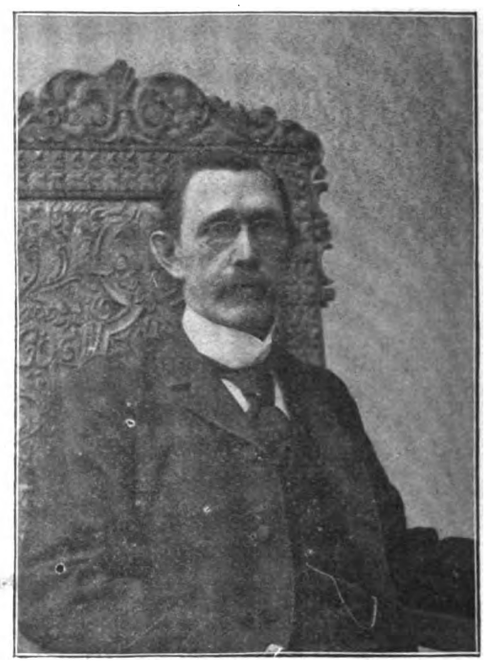
Our imports to the United States in the year 1898 were $74,000,000. In the year 1903 they had increased to $129,000,000. The imports from Great Britain, $37,000,000—increased to $58,000,000. Our imports since 1868 has increased with Great Britain 56 per cent.; with the United States in the same period of time have increased 485 per cent. (Applause). I think we are very good neighbors.

Probably the question which is of the most serious inter-

Digitized by Google

est to you and of the greatest interest to us is the movement for a preferential trade in the empire—the attempt to have England change her fiscal policy, and that movement, it would be well to understand, is one of gradual growth. It is not a sudden movement accredited to Sir. Jos. Chamberlain, the late secretary of State for the Colonies, but it has grown up through the action of the chambers of commerce throughout the whole of the British empire—at the trade congresses held in Great Britain where representatives from all the colonies were present. The question of the consolidation of the empire—the improvement of transportation, of cable service and all that class of questions—an imperial defense and also of trade within the empire, engaged the attention of those congresses, the feeling seemed to be strengthening, and at these congresses the movement met with merely the prejudices that existed through the years.

This year—I might say last year—we had a congress in Canada—some 143 representatives being present from all parts of the Dominion. There the enthusiasm was intense with regard to the strengthening of bonds between the empire, and also to formulate some policy for the increase of



T. James Fernley,
SECRETARY-TREASURER.

trade within the empire. We had the representative of the English colonies, Colonial representatives from India, South Africa, New Zealand, Australia and from all parts of Canada and from all the trade centres of Great Britain. We had the strongest men in England, the largest manufacturers, the men most largely interested in commerce and shipping, and they all gathered in Canada this year and took a tour through Canada and they held a conference in Montreal. The prejudices of a great many of those men were broken down during that conference, and most enthusiastically was the resolution passed for preferential trade within the empire. This means that England and her colonies will build up a protective tariff—inaugurate a protective policy—against those who close their gates against them.

It is hardly reasonable to expect that England and her colonies, or England and her united Kingdom—will continue to leave her gates open, and her trade for the convenience of those who close their gates against her. She has been wonderful in her forebearance for the American people. She must have loved them much to keep the door open and I am sure gentlemen, the day is coming when England will build her tariff wall. You should also congratulate yourselves. My idea personally is that in the process of time these preferential barriers may be swept away and that we may have not only preferential bonds strengthened, but we may have commerce throughout the British Empire with the United States, on such a basis that there shall be a full and liberal interchange of all we can produce. (Applause).

Following this address which was received with hearty applause, President Kirk said the convention desires to convey its most hearty thanks for this most able address from our Canadian friends, and we wish to assure our Canadian friends that the bonds of friendship and sympathy that have existed between their organization and our organization have been strengthened as the years have gone by, and I wish further to assure them that if the matter of securing closer trade relations as well as social relations with Canada the people on this side are without any question inclined more and more towards favorable arrangments, and that the cause of reciprocity with Canada on fair business lines to both the countries is ever more and more attracting the attention of the business men on this side and out of which without any question favorable action is going to come.

On motion of Mr. Morley, Mr. Van Newkirk of& Philadelphia was made journal secretary of the convention and on motion by Mr. Walther, Mr. Dudley and Mr. Fernley were selected as pages, seconded and carried. Mr. Griffith moved that Mr. T. J. Fernley, of Philadelphia, be elevted as railroad secretary for the convention. The motion was seconded and Mr. Fernley was elected.

William W. Supplee,
MEMBER OF ADVISORY BOARD.

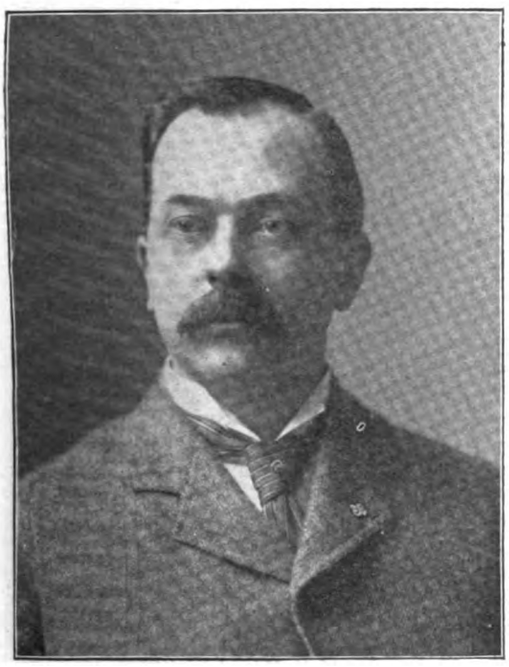
President Kirk then read his annual report as follows:

PRESIDENT KIRK'S ANNUAL ADDRESS.

Members of the National Hardware Association:

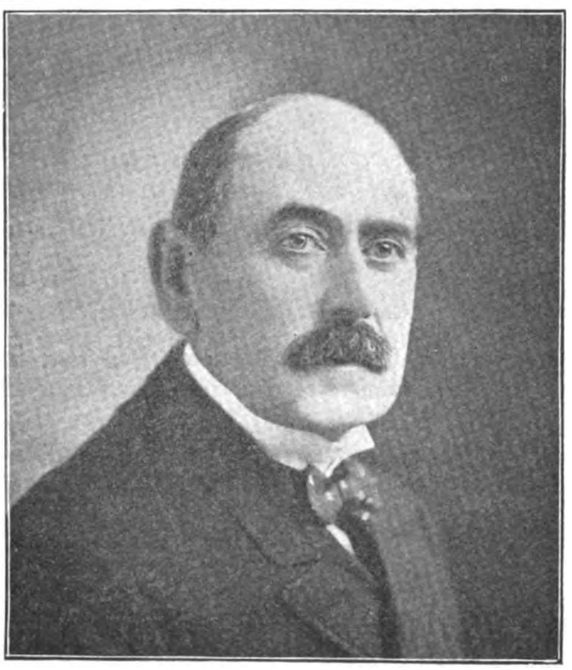
A year has passed since our meeting in New Orleans and throughout these twelve months we have carried very pleasant memories indeed of that delightful meeting—delightful not only in enjoying the charming hospitality of the Queen City of the South, but delightful also in the spirit of harmony and co-operation which animated that convention during its sessions and which has since followed us.

In my address at the opening of the New Orleans convention, reference was made to the five years of remarkable prosperity which had been enjoyed and also to the reasonable expectation that, sooner or later, days and probably years would follow when the sun would not shine so bright and the clouds would lower. It was our expressed belief, then, however, that, while lower levels of prices in the order of events might be expected, great changes at an early day were not probable and that steady markets generally might reasonably be expected for the large part of the following year.



Although we have seen during the past year a most remarkable depreciation on the stock markets, one that in the magnitude of the interests involved as well as in the wide scale of fluctuations has perhaps never been equalled, yet

Digitized by Google



OUR GREAT MANUFACTURING AND COMMERCIAL INTERESTS

have gone steadily along. Speculation and inflation had run their maddening pace and the day of reckoning came, but the channels of legitimate business have not been greatly disturbed. There has been a slight decrease in the demand for certain heavy iron products—and in such lines there has been left the choice of lower and perhaps in some cases unprofitable competitive prices or of restricted production, but the great wheels of industry generally have been kept in motion and the business energies of the country, while affected to some extent sympathetically, are still actively and profitably employed. Aside from speculation there have been also other harmful influences that have come in and have interfered largely with the regular currents of business.

Among these baneful factors it is safe to say that labor troubles have done more to disturb and impede the progress of the country in material improvement during the past year than all other causes combined. This condition of things is greatly to be deplored and in our opinion the time has come

H. H. Bishop,
MEMBER OF ADVISORY BOARD.

John Bindley,
MEMBER OF ADVISORY BOARD.

when the business interests of the country must necessarily take a more active part in efforts to prevent these great disturbances and the tremendous losses entailed by them. There is surely some practical way in which employer and employee, capital and labor

CAN BE BROUGHT TO WORK TOGETHER FOR THEIR MUTUAL GOOD

and that will render strikes and boycotts harmless and impossible.

At the New Orleans convention the evils resulting from the published prices of catalogue houses on certain standard goods were duly considered and action thereon was taken. Your officers and Executive Committee have given time and effort toward carrying out the object in view. In this work we are co-operating with the National Retail Hardware Association and have reached some degree of success. The trouble is, however, deep and far-reaching and much work and also time will be required to effect a cure.

Our members were pledged in that convention to assist the officers of our Association in the prosecution of this work and we trust that this pledge has been faithfully observed and that you stand ready to-day to renew this pledge and to do all in your power to help remove this great evil.

In this connection we call your attention to the renewed effort that is now being made to induce Congress to pass the bill known as the Postal Parcels bill. This bill is

DIRECTLY IN THE INTEREST OF THE MAIL ORDER AND CATALOGUE HOUSES

and its chief support comes necessarily from them. We can readily see the powerful influence that is back of this movement.

If this bill were to pass, we believe that the evils which the great body of retail and wholesale dealers of the country have already suffered from this most pernicious practice of the houses referred to would be small indeed when contrasted with those that would surely follow. The yearly deficit in the Post Office Department is already large and it is rapidly increasing and its deficit comes very largely from the fact that the Government is now carrying second and third-class matter at from one-fourth to one-third the actual cost of its carriage. By the provision of this iniquitous bill a package of 11 pounds of merchandise would be carried for 25 cents. For this price this package of 11 pounds would be carried from New York or from the most distant point on the Atlantic Coast to San Francisco or any other Pacific Coast point, including Alaska, and the same price would carry it to Honolulu or Manila.

Statistics show that the cost of handling mail matter in this country is now about eight cents per pound. Advocates of this bill would ask the Government to sustain this tremendous loss, in the fact of the present year deficit of many millions of dollars which the Government already suffers from carrying second and third-class matter, under the present regulations. Bear in mind also that this great additional burden to the Government would be taken on expressly for the purpose of carrying articles of merchandise. The public is doubtless willing, if need be, to submit to some loss in the carriage of newspapers and periodicals, on the ground of the educational advantages thus given to the people. But for the Government to become a carrier of merchandise and to undertake to handle vast quantities to from one-fourth to one-third of the actual cost incurred seems to us

SUCH A STUPENDOUS PIECE OF FOLLY AS TO TAX OUR CREDULITY

regarding the possibility of such a bill becoming a law.

First-class mail matter now substantially pays its way and if the Treasury at some time in the future shall be in a condition to bear a larger deficiency than it now carries from the Post Office Department, let us have one-cent postage on first-class matter and thus help the general public and at the same time not have the Government lend itself to be the tool of large interests that are working for their own selfish ends. Action in this direction by Congress at the proper time in the future, we believe, will meet with the hearty approval of the people. I trust that, in view of the strong efforts that are now being made in behalf of this bill, this convention will take such action on the subject as it may deem proper.

As we come to the close of the year the prospects for the coming year deeply concern us and the cry of the prophet of

Digitized by Google

old, "Watchman, What of the Night" is often on our lips. It is the constantly recurring thought that comes to us year by year, as we face new conditions and new problems. There is a readjustment of prices now going on in a few lines of Heavy Hardware. In this process the adjustment it is believed that the great body of articles of Hardware will not be

SAMUEL A. BIGELOW,
MEMBER OF EXECUTIVE COMMITTEE.

affected, not at least until manufacturers can materially reduce the cost of such goods. We can, therefore, readily see that there is no ground to expect radical changes in prices in most lines of Hardware.

As we take in the outlook to-day and fully appreciate the difficulties before us we also see the many evidences of favorable conditions ahead that cheer us on to fresh endeavor.

The general conditions of business are good and the signs of the times certainly indicate that, over and above anything that tends to discouragement, there is much more to give us AN ABIDING FAITH IN THE FUTURE FOR HIM WHO STEADILY WORKS on and plans and bides all his time.

In my address at our last convention I gave as the strongest ground for our confidence in the new year the prosperous condition of the American farmer. We are able to say that this condition still continues. Droughts, floods and destructive insects and other misfortunes have prevailed in certain sections, but still our great farming communities are fairly prosperous. In the final analysis we all come at last to the farmer for our support and so long as he is able to get a reasonable compensation for his labor the business interests of the country will not permanently suffer and so long as speculation does not run wild and labor organizations shall free themselves from dangerous and lawless leaders and counsels and so long as the Lord of Harvests shall continue to crown the work of the tiller of the soil with His blessing throughout our vast and wonderfully productive country, so long we may expect our people to come up to our yearly conventions with satisfaction and thanksgiving.

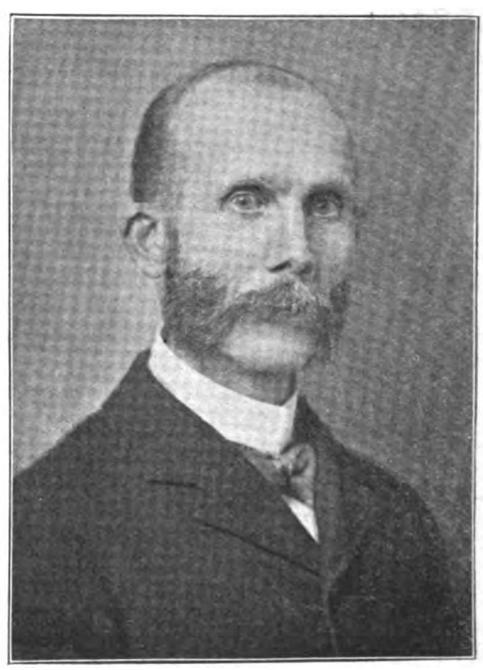
Since our last meeting the following-named members have departed this life:

Charles G. Dennison, of Sidney Shepard & Co., of Buffalo, N. Y., and C. Sidney Shepard & Co., of Chicago, Ill., died March 17th. Mr. Dennison was devoted to the interests of his house and so constant was he in his labors in the extension of its interests that his health broke down under the strain. Mr. Dennison was recognized as one who was a loving husband and father and a genial friend and associate.

Charles Wesley Hackett, of Hackett, Walther, Gates Co., St. Paul, Minn., died March 21st. Mr. Hackett was in his 72d year. He was a faithful soldier for his country and a strong advocate of principles of the National Hardware Association. He attended several of its conventions and endeared himself to all with whom he came in contact. He was successful in business and was a man of high Christian character.

Edward P. Beals died April 9th. Mr. Beals was senior member of Beals & Co., Buffalo, N. Y., and has been identified with the Hardware business fifty-seven years. His life was full of good deeds and during his long and successful career no one could ever ascribe to him other than honorable transactions.

John Tredway, treasurer of A. Tredway & Sons Hardware Co., Dubuque, Iowa, died April 13th. A man of only forty, he was removed from a loving family and business associates to whom he had much endeared himself. He left an unsullied name.



James G. Forsyth, of Sidney Shepard & Co., Buffalo, N. Y., died May 10th. Mr. Forsyth was in ripe old age, having reached the age of seventy-one years, and had been faithful to commercial interests from early in his life, and was looked upon as one who had done much for the improvement of the city of Buffalo.

Samuel B. Hubbard, president of the S. B. Hubbard Co., Jacksonville, Fla., died June 21st. He had reached three score years and ten and had identified himself with the growth and development of the city of Jacksonville since 1866. He was one of the most progressive business men of that city, occupying positions of honor and responsibility in a large number of important enterprises.

Edwin C. Harwi, treasurer of the A. J. Harwi Hardware Co., Atchison, Kansas, died September 4th. He had been in the active Hardware business in Atchison for twenty-six years and had the confidence and respect of the entire community.

It is with great pleasure that we meet the American Hardware Manufacturers' Association, now holding its third annual convention in this city and whose members honor us by their presence in this hour. We anticipate large benefits to both Associations from these meetings, not only from thus coming to know each other better personally but also from our conferences on the many important subjects which mutually concern us.

Gentlemen of the National Hardware Association, let us

J. D. MOORE,
MEMBER OF EXECUTIVE COMMITTEE.

see to it that these days which we shall pass together here shall be profitably employed. In them we have the opportunity to do much that will help us to make our business, in our respective houses, more pleasant and profitable. Let us come into these sessions to give, as well as to get, and let us see that this convention shall be one that will go down in our lives with many gold memories.

At the close of his report the president stated that in ad-

Digitized by Google

dition to the deceased members mentioned recently Mr. Stauffer, of the firm of Stauffer, Eshelman & Company, of New Orleans, had passed away.

The secretary-treasurer, Mr. T. James Fernley, then read his annual report as follows:

REPORT OF SECRETARY-TREASURER.

By T. James Fernley.

To the Officers and Members, National Hardware Association of the United States:

Gentlemen:

To-day we come before you with an annual report for the ninth time and we assure you that it becomes more difficult each year to treat in a document of this nature, of the work

R. M. DUDLEY,
MEMBER OF EXECUTIVE COMMITTEE.

performed, in a manner which is in harmony with its importance.

It is more difficult to present in a condensed form than would be the case if it were not for the fact that we have been in almost daily correspondence during the year with the members of our Association; indeed, owing to our constant communication with you, there does not seem to be a necessity to review the many details of which we have treated through this correspondence.

I assume that the members of our Association, when assembled in convention, merely desire an outline of the character of work which has been pursued. The importance of the work is becoming more and more recognized by manufacturers and retailers, as well as by members of the organization. Manufacturers of goods sold by the Hardware jobber seem pleased to know that there is an avenue through which they can obtain information as to the desires of their customers. Hence, in addition to voluminous inquiries through the mail and a large number of individual conferences, your secretary-treasurer is invited before almost every body of manufacturers coming together to arrange a selling policy.

The responsibility on occasions of this kind is realized and we always endeavor to present the interest of the jobber in such a way that the manufacturer will not feel that we arrogate to ourselves the right to dictate to them, but rather, that our interests are so closely interwoven that one cannot suffer unless the other is affected. Further, in coming before the manufacturers we never lose sight of the fact that they have difficulties of their own which sometimes are not fully appreciated by the jobber and it is not always best for them to do all that the jobber feels should be done. We also have constantly before us the fact that certain firms are doing a small jobbing business who are not connected with this Association, but who have rights and privileges which entitle them to recognition.

We feel that

OUR POSITION IS MUCH STRONGER WITH OUR MANUFACTURING FRIENDS

because they recognize that we are absolutely fair in all requests which we make. We also have constantly before us when conferring with manufacturers, the fact that the retail merchant of the country is also an important factor in the general scheme of distribution and that under no circumstances is it right for us to purpose any plan which is not in harmony with the best interests of this branch of the trade.

We have successfully demonstrated to the manufacturer that his goods can reach the hands of the retail merchant

AT A LESS PRICE THROUGH THE CHANNEL OF THE JOBBER

than if the manufacturer was to attempt to distribute his own goods, and this fact is fully appreciated by the retail merchant, so that in all parts of the country the retailers are quite content to rely upon the jobbing houses competing for his business as a basis of supply and therefore the retailers realize that it is of greatest importance to have close at hand an assortment of goods in large quantities from which immediate wants may be speedily supplied.

In the wholesale Hardware business there is no longer an inclination to argue on the necessity of the jobber. It is only necessary for the jobbing trade to endeavor to co-operate with the retail merchant in such a way as will cause a continuance of the present mutuality of interest. During the past year we have been in very active co-operation with the National Retail Hardware Dealers' Association, which organization is composed of representatives from the various State Retail Hardware Dealers' Associations. Eighteen States are well organized and all of them are now affiliated with the National organization.

This Association is officered by men of highest ability who

F. A. HEITMANN,
OF MEMBERSHIP COMMITTEE.

are doing their utmost to serve the interests of the retail merchants of the country. The policy of the National Hardware Association of the United States is thoroughly in harmony with that of the National Retail Hardware Dealers' Association, so very naturally we are working side by side for mutual interest.

On May 18th, 19th and 20th a conference was held between the Executive Committee of the National Retail Hardware Dealers' Association and our Executive Committee This conference extended over a period of three days and resulted in the formation of plans of work which we be-

Digitized by Google

lieve will eventuate in a marked improvement of present existing conditions.

One of the subjects discussed on that occasion was the Postal Parcels Bill, so-called, which provides for the carrying of merchandise in the mail, at a very low rate and to which retail dealers are strongly opposed.

We hope our Association will go on record as also opposing the passage of the measure which is designed for this

GEORGE B. LOGAN,
MEMBER OF TRANSPORTATION COMMITTEE.

purpose. Truly the retailer is between Scylla and Charybdis and we can but express the hope that the National Hardware Association of the United States will be the Odysseus who will safely convey them past these menaces to their future welfare.

CORRESPONDENCE WITH SALESMEN.

During this year we have issued a large number of letters to the traveling salesmen connected without membership, endeavoring to assist these most estimatable men in their efforts to conduct business according to the motto adopted by the first president of our Association, which is, as you know, "We advocate and strongly urge the conducting of the wholesale Hardware business on a high standard of business methods."

Our Association in taking up this department of work realizes that in order to carry out to the fullest extent the object for which we were organized it is necessary to enlist the active support of upwards of 3,000 traveling salesmen in the employ of members of this Association.

The letters alluded to above have been sent out at frequent intervals; 3,300 being distributed with each issue. These communications have in each instance been sent to the head of the Sales Department and some very valuable replies have been received from the traveling salesmen.

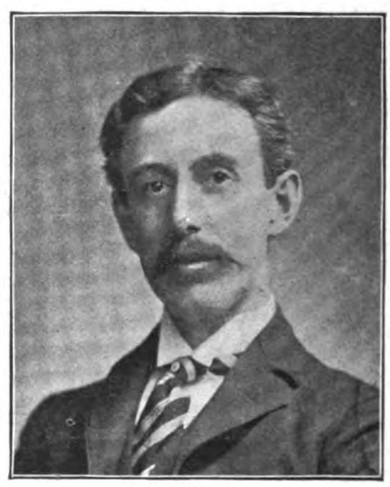
We purpose to continue this branch of our work and express the sincere hope that the salesmen connected with our membership will take a lively interest in the same.

LOCAL AND SECTIONAL ASSOCIATIONS.

It has been our pleasure during the year to visit a number of Hardware trade associations in various parts of the country. We feel that it is extremely important that these organizations should be supported even more strongly than at present, as there are many matters which can be adjusted through the good offices of the local and sectional organizations which would not be feasible to regulate through the National organization.

We particularly commend to the jobbers of the South that most vigorous organization—the Southern Hardware Jobbers' Association; to the jobbers of the Coast—the Pacific Coast Hardware and Metal Association; to those of the extreme Centre West—the Missouri River Hardware Jobbers' Association; to those located in the State of Texas we commend the Texas Hardware Jobbers' Association; to those of New York State we urge and heartily commend the New York State Hardware Jobbers' Association, and to those of New England —the New England Hardware and Metal Association.

MEMBERSHIP.



The members of our Association show continued interest in the affairs of the Association. Letters have been answered where an answer has not been called for; new business is constantly being placed in our hands for execution and we are pleased to report that our roll shows practically the same number of members as in previous years.

We have had an unusually large number of applicants for membership, some of which have been acted upon favorably, the others remaining on our waiting list. It is the policy of the committees determining the question of membership to extend the privileges to only such as in their judgment shall add strength to the organization.

PREMIUMS FOR ANTICIPATED PAYMENT.

We are very much pleased to advise you that our efforts with manufacturers who had abandoned the cash discount prinicple, have been highly successful, so that at the present time few prominent manufacturers refuse to give the buyer, who places funds in his hands within ten days of shipment, a special discount or premium.

We believe that if it had not been for the efforts of this organization along this line, during the past three years, the cash discount would have been denied all classes of buyers. Several prominent manufacturers have yielded this point. During the past year their names have been mentioned through correspondence with our membership and as they are to be present at the meeting when this report is read, we prefer not to mention their names, fearing they might be criticised by their competitors for being so slow to realize the justice of the position which this Association assumed in the convention of 1899. Suffice it to say, they have successfully yielded to our request.

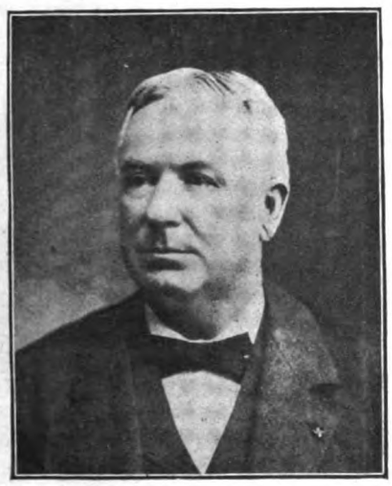
JAMES H. RITTER,
MEMBER OF ENTERTAINMENT COMMITTEE.

CLASSIFICATION OF THE TRADE.

We find that this branch of our work is meeting with increased favor and that the retail merchants realize that we are aiding them. Before our Association took up this work, there was no avenue through which a manufacturer, who desires to protect a retailer, could obtain authentic information as to the character of business conducted by any house. As it is at the present time, this branch of our work is given great prominence and the manufacturers of the country are realizing that they can consult without any fear of their own name of the party submitted becoming public.

It is impossible, therefore, to give any adequate statement of the benefit accruing to our membership from this branch of our work or even to the other officers of our Association. They recognize the importance of such information being in the custody of the secretary and treasurer of the Association, and I want to publicly state that at no time has any officer or member of our Executive Committee attempted in any way to obtain such information.

And now, for the ninth time, I want to thank the members of this Association for the confidence which they have reposed in me. We recognize our shortcomings; if nature had endowed us with more ability, you should have had the advantage of it. At all times we have been willing to do all we knew how, but unfortunately, we realize that we have not had the ability which we should have liked.



During the period we have held this position you have

Digitized by Google

placed five of the most worthy and talented men connected with the Association in the position of presidency of the same and whether it was under the administration of him who has been declared the best organizer connected with the mercantile life in the last quarter of the Nineteenth Century, William W. Supplee, or under the guidance of that calm, cool, clear-headed and conscientious Bishop or the gentle and loving Shepleigh or the conservative and energetic Bindley, or, last but not least, under the administration of him, who has the confidence, love and respect of every member of this Association, Mr. R. A. Kirk.

We have been guided and instructed by all of these in such a way as they believed would be to our best interests.

The past is a matter of record and the future is not ours. We can but hope that this organization will complete the last year of its first decade in a manner which will reflect honor on not only its own members but lead to its continuation by all who are engaged in what we believe to be the most honorable calling, namely, the distribution of Hardware, and strong pressure is brought to bear on your present secretary-treasurer he may be induced to remain in office for the good of the cause and the slight financial consideration allowed.

COL. J. R. NUTTING.

President Kirk: We have with us, ladies and gentlemen, to-day two of the representatives—the president and the secretary—of the National Retail Hardware Association. They have been invited to address us on such subjects as in their opinion mutually concern the retail and the wholesale Hardware associations of the country, Mr. W. P. Bogardus, of Mt. Vernon, Ohio, is president, and Mr. M. L. Corey, of Argos, Ind., is the secretary. We now desire to hear from these gentlemen. As I undestand it, Mr. Bogardus desires to have the order of procedure changed and instead of his speaking first Mr. Corey will first address us.

Mr. Corey addressed the convention as follows:

ADDRESS.

By M. L. Corey.

We recognize in speaking to you to-day that we occupy a position entirely new in the annals of Hardware; that it may open opportunities and questions not visible, nor even thought of at this time. There is one question that is considered paramount in this meeting, but the sentiment as expressed to us by members of the two associations represented seems so nearly a unit in our favor I ask your indulgence while I briefly touch another topic that we firmly believe is responsible for the new question that really accounts for our presence to-day.

Hardware jobbers have settled the question, at least to their own satisfaction, that they are an absolute necessity in the distributing of Hardware products. This being the case, they must naturally be vitally interested in another class, and that is their retail customers, for they are the foundation upon which the jobbers' trade is built. The retailers' success depends upon the prosperity of the towns and villages in which they live, the good will, confidence and patronage of their community. Anything that threatens the stability and permanence of this arrangement becomes a mutual menace, and should be so recognized and dealt with.

CATALOGUE HOUSES.

I wish to call your attention to the catalogue house and its effect upon 90 per cent. of your customers. I refer to the

CHARLES H. TURNER,
OF FRATERNAL RELATIONS COMMITTEE.

country merchants. Understand, these houses, while affecting our city brothers to some extent, especially aim to capture the farmers' trade—to prejudice him against his local dealer. Their alluring and misleading advertisements and low-priced leaders are having their effect, and energetic, intelligent, combined effort is necessary to maintain the jobbers' and retailers' supremacy. The success of the catalogue house depends entirely upon under-selling the retailer on staple articles and brands of goods already introduced and well known, through the man who stands face to face with the consumer. Give them price advantage and they can sell a necessity, but the personality of the salesman is necessary to create desire, and introduce a new line. If this is true, then the catalogue houses are simply lawful pirates, and in view of some of their unscrupulous methods, most dangerous and demoralizing competitors. A single instance will illustrate: Sears, Roebuck & Co., of Chicago, sent out over the country a letter to postmasters, offering to pay a cash commission on every money order written in their favor. This was an unlawful proceeding, but as the postmaster himself became a party, and the transactions were concluded between the two, convictions were almost impossible.

We will not attempt a comparison of prices. We appreciate the fact that each of you have at some time or other been up against them. Careful examinations prove that about 90 per cent. of the catalogue house leaders are selected from Hardware and kindred lines; that especially well known and meritorious brands are very desirable for cut-price attractions, the danger from this does not appear at first glance. It comes from the gradual alienation of the consumer's confidence and patronage of his home dealer, and injures the jobber as well. To meet this condition the retailer must adjust his prices to compete. Upon you, Mr. Jobber, rests the burden as well.

It is common experience among our members to ask you for a certain article and be quoted higher than the listed catalogue price. This should not be. It is imperative that both the jobber and the retailer meet the issue, even if it mean for a time a mutual loss. A revision of your prices should be made, and your traveling salesmen instructed why it is done. He in turn could explain to the retail customer the necessity and advantage of retailing the article at the catalogue house price. We are continually preaching to our members this doctrine: Meet the price. We need and should have your intelligent, active co-operation. Here is where our Association can benefit. Suppose your efficient Secretary Fernley should send each of you a letter naming such arti-

Digitized by Google

cles as are used as leaders by this competition, and the price they quote. Suppose he or you would post your traveling salesmen to assist the retailer in protecting our mutual trade? Would it not act as a muffler on their thunder?

We cannot see how any jobber can consistently sell or encourage catalogue houses; their success means your failure as sure as the retail system is crippled. They only buy of you when the manufacturer will not sell them, or to fill short items in their daily business.

A mail order house moved from one city to another; the principal reason given for the change was that the wholesalers refused to furnish them goods to fill their short items. Mail order houses claim an advantage in their making the manufacturer and jobber carry their stock. Many of them would not exist without such assistance.

Some manufacturers, when approached concerning low prices quoted on their goods by this competition, have sent us circulars and newspaper clippings proving some of our members are selling in given localities even lower. Catalogue houses have justified their cut prices on these grounds, and a few jobbers have agreed with them. We emphatically protest against this injustice of such comparison. A retail price of 50 cents on an eight-quart Enterprise stuffer would scarcely be noticed 25 miles away, let alone 100, 200 or 1,000 miles distant. Even in the same town considerable difference in prices may remain unnoticed. But let a catalogue house name 50 cents on an eight-quart Enterprise stuffer and every customer from Maine to California is told that this article is worth only 50 cents and anyone who charges more for it is either unable to buy right or will not sell right, and in either case not entitled to the patronage of his community. When an unprofitable cut price is named every dealer in the United States faces exactly the same condition and must adjust himself to meet it.

Jobbers and retailers alike are in business for profit. Manufacturers must realize that whenever their lines become unprofitable something else is substituted. Therefore we claim that whenever a manufacturer sells mail order people he should do so under a limited selling price agreement. This position is taken by the retail associations and should be as firmly insisted upon by the jobbers. Such contract is a lawful one and can be enforced.

It has been frequently charged that jobbers (not members of your association, I am glad to say), have bought certain goods in large quantities, thus securing a price advantage, and turned the surplus over to the catalogue houses at a very slight advance; conclusive proof of such work would justify our members in withdrawing their patronage from such firm or firms.

Entirely too much preference has been shown to the quantity buyer. It encourages over-loading and under-selling; it builds up a catalogue house; breaks down the distinction between the jobber and retailer and demoralizes trade generally. The merchant who buys his supplies through the wholesaler buys often and as his trade demands. If this is good business he should not be handicapped by higher cost on his stock. Special prices on a quantity basis have built up this new competition for us until it does not hesitate to dictate terms to the largest manufacturer, and if their demands are refused the catalogue houses proceed to advertise the manufacturer's products at cost or less, even though they cannot fill a single order. Their plain object is to injure the manufacturer by making the sale of his products unprofitable to the general trade. In this way they expect to hold and gain further special privileges. It is blackmail; it is dirty business; it is dishonesty; but it has been done time and again, and is being done this very moment.

We have always claimed that catalogue houses were only large retailers and not entitled to jobbers' advantages. Recently these houses are asserting that they are doing a big jobbing business with regular merchants. Whether this claim is made to secure recognition from manufacturers or to further influence the consumer to patronize them we do not know. It does not need very much calculation to figure out the calibre of their merchant customers. It is safe to say that Dun or Bradstreet never gave them a rating.

As to the economy of the mail order system as compared to retail dealers we have a decided advantage. The cost of printing and mailing their books alone is stated as nearly 10 per cent. of their sales. The increase in the number of these supply houses will result in fierce competition between themselves, and a constant and continual hammering for lower and special prices, and cheaper made goods.

If our friendly jobbers are alive to the situation; if you can sell us our stock as low as this competition can buy; if you will aid us in defeating injurious measures, the future should not only strengthen the position of the jobber and retailer, but result in more harmonious and closer relations between our individual members.

There is a growing tendency among retailers toward better business methods, neater and more attractive stores, discrimination favoring a higher grade of goods, more prompt collections and payment of bills, more intelligent and effective advertising; the standard of gentlemanly traits of both retailers and their clerks has been raised until the Hardware

COL. B. F. ESHLEMAN.

dealer in almost every town and village in our country is regarded as one of the representative men in his locality. How much credit for these conditions is due to our Retail Hardware Associations and our loyal trade press that has continually co-operated with us I will not venture to say. Certain it is that every State Association has worked hard and earnestly to accomplish these results. This education has also taught us there is such a thing as common interest between the jobber and retailer; that an injury to one means a corresponding loss to the other. Individually we never would have ventured to suggest an alliance—a sincere co-operation for a mutual advantage. Our associations open the way.

I think all present will also admit that there is to-day a greater amount of business fellowship between the two great bodies of distributors of Hardware products than ever existed before. There is more charitable and broader interpretation of individual differences that will always happen between buyer and seller. There is more confidence in the honesty and good intentions that regulate the average daily trade transactions. We speak of the trade in general. Some of your members as well as ours have not become converted and in touch with the changes. During the year 1903 less than one-fourth as many complaints have been made against your members as in 1902. Prior to 1902 the retailers regarded your association with suspicion, and as an organization formed for your individual advantage. I speak as the representative of thousands of retail Hardware dealers when I say that our members to-day regard the jobber who belongs to this association in a more favorable light than the one who persists in going it alone. I know this from personal contact and letters received. The man who should be held

Digitized by Google

mostly responsible for this change of sentiment is none other than your secretary, Mr. T. James Fernley. The conference held in Philadelphia between the officials of our respective associations opened our eyes to the further advantages of a combination of influence to obtain mutual benefits. In our coming conventions we will emphasize the desirability of encouraging those who have pledged themselves to respect our rights and territories, and who have joined us in making a common cause against common evils.

Mr. Corey's remarks were heartily applauded and President Kirk then introduced Mr. W. P. Bogardus, the president of the National Retail Hardware Dealers' Association. Mr. Bogardus said:

ADDRESS.

By W. P. Bogardus.

It has been to me an ideal condition when men whose business interests are so interwoven as manufacturers, jobbers and retailers of Hardware are could get together and talk over their business affairs. I have felt that a better understanding between the different branches could be established by conferences. That face to face talks would result in greater mutual confidence. The result of the conference, held last May in Philadelphia, has strengthened my belief and when the invitation came to the president and secretary of the National Retail Hardware Dealers' Association to meet you here and discuss further some questions that seemed to be important to us, and about which it seemed we should have a common opinion, my hesitancy, to appear before so notable a gathering of manufacturers and merchants many of whom have world-wide reputations, and all of whom have helped to establish the commercial supremacy of our common country, I say my hesitancy is driven away by the hope that further good may be accomplished by this conference.

There seems to be a feeling, on the part of some that the government was organized to look after their private affairs and take care of them. To this end propositions are continually being brought to the attention of Congress, and action urged upon ill digested measures. And

THE RESULT IS A GREAT ACCUMULATION OF SPECIAL LEGISLATION

that is unjust and unfair, to the general public. Our attention is being called at the present to a bill that is to be introduced in Congress, at the coming session, and if possible passed into a law. This bill is called a Post Office Bill, and the purpose of it is to have the government carry as merchandise all sorts of goods in the mails. One paper advocating the bill lays particular stress on the idea that he can get his vegetables fresh every morning by mail. The bill further proposes that the Government shall insure the safe delivery of goods up to the amount of $10 without the sender declaring any value. When he declares a value then the government will pay the sender the full value of his shipment up to $25 on proof that goods were damaged or lost through fault of the government. All this work is to be done by the government for one cent on packages of less than three ounces, two cents for packages over three ounces, up to six ounces, five cents for a pound, two cents up to the limit of 11 pounds. No package shall be over three and a half feet long nor occupy more than two cubic feet. This bill evidently is not original with the man who drew it. It might with perfect propriety be called "An Anglo Maniac" for it is not to the "manor born," but is an importation from the paternal government brought here with the evident intention of trying to graft it on a democracy. The effort should be a failure because it is legislation for the few at the expense of the many. This is a government of the people, for the people, and by the people, and we have no use for paternalism in this country.

The P. O. Department is weighed down, at the present, with a burden that results in an annual deficit running into millions of dollars. This deficit is brought about year after year as a result of special legislation. The rate on second class matter is one cent per pound. The actual cost to the government for handling and transporting second class matter is seven cents per pound. So that on every pound of second class matter sent through the mails, the government loses six cents. If second class matter was confined to the limits prescribed by the statue, even if there continued to be a loss on account of it no one would raise any objection.

The universal reading of the newspaper and magazine by the people of this country is one of the most hopeful signs of the times. It means a broader view on all subjects;

IT MEANS THAT THE AMERICAN PEOPLE THINK.

To many the newspaper and magazine constitute their entire library. I would not under any circumstances deprive them of their paper or magazine.

Now with the fact of this continued deficit staring us in the face, it is proposed that the third and fourth class matter be consolidated into one class, and under the name of merchandise be sent through the mails at an actual loss of

W. P. BOGARDUS.

from two to five cents on every pound so shipped. Who is going to pay this loss, and how long will the public stand for it? At present the loss on second class matter is partially made up by the excessive charge of two cents on letters. When the business men of the country presented a petition for a reduction of letter postage to one cent, the P. M. General said, it could not be done, because the government could not afford it. So you see that every one who writes a letter helps to overcome the shortage occasioned by the rates on second class matter. Shall we extend this losing rate to other classes? Who will be benefitted by it? There are certain houses who rely for their success in business on their ability to get their catalogue in the hands of as many people as possible. At present it costs thirty-two cents to send out a four pound catalogue. Under the proposed measure it would cost 11 cents.

AT PRESENT THE CATALOGUE BEARS THE BURDEN OF TRANSPORTATION.

Under the proposed bill the government would have a very large share of the expense of transportation to pay. Why should this be asked of the government?

One of the peculiar conditions that has arisen under the handling of second class matter is referred to in the last available report of the P. M. General.

A certain publication sent through the mails costs the government for each issue $11,184 for transportation, and for handling an additional $4,473, making a total of $15,657. For this the government receives in postage $2,236, leaving a balance of loss to the government of $13,429. There is 112 tons sent out at each issue. It costs the publishers $4,473

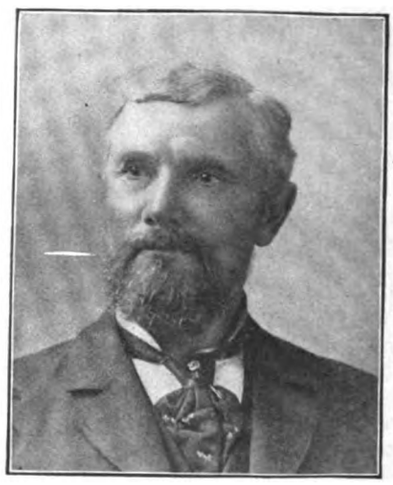
Digitized by Google

for the paper and an additional $2,864 for the expenses of getting out the publication making a total of $7,337. So you see the government pays out $6,083 more than the publisher to get the publication in the hands of the reader. And the most astonishing fact in connection with this remarkable transaction is that in the opinion of the P. O. Department there is not one genuine subscriber for any of the 112 tons. For the advertisements in each issue of this publication the publishers get $53,780. It is to the interest of every legitimate publisher to join hands in building up a sentiment against any such misuse of the postal facilities. Especially when the fact is developed that this publication is not devoted to the spread of information of a public character, takes no interest in literature, the sciences, arts or any special subject. It is just advertisements. If this was the only case it would not have the force that it does but it is one of a very large number. And if it does not serve to warn us the time will come when an angry public will arise in its wrath and strike indiscriminately at the special rate that is now so much preverted illegitimate publications.

The English Parcels Post Bill is held up as a shining example of what we should do in this country. But the example fails utterly when we remember that the average haul of parcels and letters in England is forty miles while here it is 442 miles.

The railways of England and Wales are 21,885 miles long and they carry annually 1,142,000,000 passengers. The railways of the United States are 200,000 miles long and they carry annually 600,000,000 passengers. The mail routes of England are 4,000 miles. The mail routes of the United States are 507,774 miles. The price in England is two cents for the first pound and one cent for each additional pound up to the limit of twelve pounds. If it cost one cent to carry a pound in England forty miles can you with any degree of reason say that two cents is enough to carry a parcel in this country four hundred and forty-two miles.

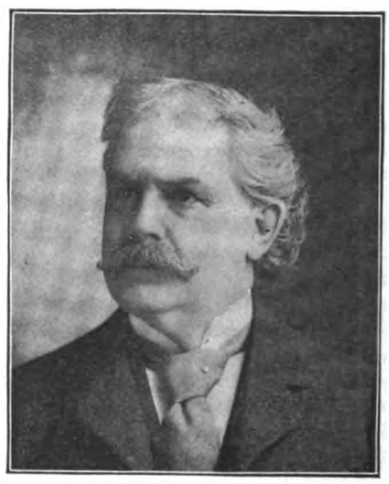
The reference to the English parcels post is unfortunate for the reason that its continuance has resulted in



A BREAKING DOWN OF THE TRANSPORTATION FACILITIES OF THE COUNTRY.

Harper's Weekly in one of the Sept. numbers in an editorial calls attention to the experience of an American who was staying for a short time near London. He wanted to send his trunk to Southampton. The parcels post limit was twelve pounds. So that he must needs send his trunk with a man to London and buy a ticket to Southampton before he could get it checked. When a business depends on its ability to wreck others, and cannot succeed until it has torn some other business down. It has very few redeeming qualities.

In the prospectus of the Post Parch League we read that "barrels of flour and sacks of grain can be carried to better advantage to the public, under the post office and at low uniform rates." The league seems to base its argument on the proposition that if the government can carry second class matter for one cent per pound, why can it not carry merchandise at a two cent rate. Perhaps it could but when the fact that the government is losing six cents on every pound of second class matter is remembered it would seem very unbusiness like for the government to experiment any further in that direction. The attempt on the part of the government to do in connection with private corporations has always been a failure. Do you need confirmation of this statement? Go to the government printing office, the navy yards and other distinctly public works from municipal to national and you will find all the evidence you will need. Governments are organized for the protection of the people and for the purpose of entering into the competition with their subjects. The Postal League says that



THIS COUNTRY HAS THE BEST MACHINERY FOR TRANSPORTATION IN THE WORLD.

We are ready to admit that but it did not come from any work on the part of the government. Private enterprise and push and vim, brought it about, and the government has taken advantage of these facilities to carry forward as complete a system of postal service, considering the distances covered, as there is on the face of the globe. And yet there are some who want some kind of a change. They want the government to go into partnership with them and pay the freight. We protest against any action of this kind because there is no call for it by the people. It will only be through misleading statements that the people will ever be lead to call for it. The ones who will be largely benefitted by the enactment of the proposed bill into a law are those who are seeking a break down to the jobber and retailer for their avowed intention is to "cut out the middle man." To this end they are seeking to enlist the press by promises of large amount of advertising and the advertising syndicate with

C. B. Lockwood.

larger fees. The bill is not fair to the business interests of the country. The large amounts now invested in transportation facilities for the prompt distribution of merchandise all over the country would be seriously jeopardized without any compensatory equivalence. It is unjust to the general public because it adds to the taxes and increases the number of government employees. Surely no one will contend that merchandise can be carried at the rates named in

E. W. Morley,
OF THE PRESS COMMITTEE.

the bill all over the country. It is unbusiness like to demand that goods shall be carried from Portland, Maine, to Portland, Oregon, for the same rate as they could be carried from Boston to New York. It is selfish because it aims to array the government against the man of small means and discourage him from going into business for himself. It is dangerous.

THE AIM OF SUCH LEGISLATION IS TO GET GOVERNMENTAL AID

to help build up mammoth business interests in the large cities at the expense of the smaller towns and villages. It means that the retailer and his clerks will be looking for

Digitized by Google

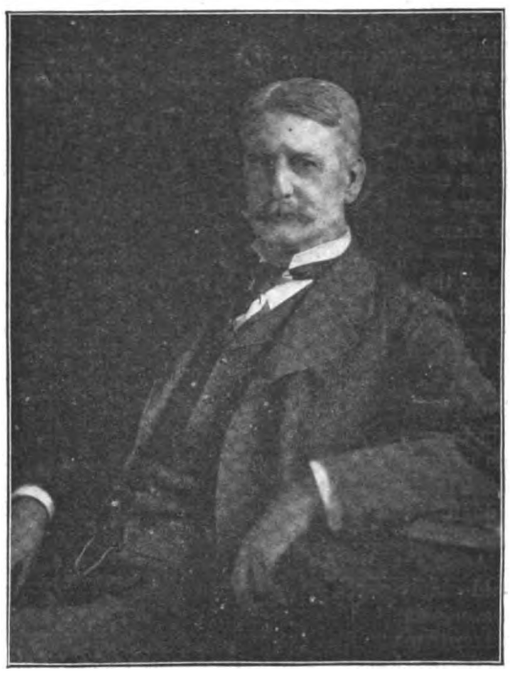
some other way to get a living, and the jobber and his traveling men will be looking in vain for his customers. There is no country so sure of peace and plenty as the one that is filled with small towns and cities. Large cities are a menace. It is special legislation and doubly dangerous, because it is in the interests of the few as compared with the interests of the many. It is socialistic in its tendencies, because it will help to educate the people to believe that the government is on the side of the rich. This bill if passed will put immense fortunes in the hands of a few and bring ruin to many who now live contented in their small way and are useful and respected citizens. Outside of all personal interests I view the proposed legislation with fear and apprehension. I believe it tends towards teaching the people that they have a right to look to the government for support. It tends to undermine the independence of the people and helps them to feel that it is the duty of the government to help them get a living. It opens the way to very great corruption when a saving of $500 can be made by two houses by the passage of this bill in shipping catalogues. The commercial spirit of the age and the opportunities afforded, the eagerness to get rich quick and a public sentiment that bows to wealth, without asking any questions as to how it was attained makes the temptation opened by this bill if passed, too great for the ordinary man to resist. It means that old fashioned honesty and independence must take a back seat. We are opposed to the bill because it is an effort on the part of the catalogue and mail order houses to get the government to pay the expense of their traveling men. The retail trade of this country does not want any legislation in their favor. Neither do they want any legislation favoring any other class. This is a fair fight and no favor.

On motion by Mr. McKee it was ordered that the secretary send a copy of the address of Mr. Bogardus to each congressman and senator of the United States, to the officers of the various Hardware Associations and to the trade papers.

President Kirk: The last feature of our morning session you will notice is called a collocution. One of the unfortunate victims selected for the function calls it the "electrocution." Now we wish to change the order of proceedure a little and we will call on Mr. J. C. Birge of the St. Louis Shovel Co., of St. Louis, as the first speaker. You will notice that the subject that has been selected is that of the "Jobbers' Association as viewed from an outside standpoint."

Mr. Birge addressed the convention as follows:

J. C. BIRGE'S ADDRESS.



Mr. President, ladies and gentlemen:

Sailing out from Santiago Harbor one morning after the Spanish war, a military officer, pointing to an old Cuban who stood on the bridge with the captain, said to me: "That is the pilot who was compelled to stand beside Cervera on his flagship when that Spanish admiral made his fatal attempt to escape from the same harbor. On reaching the opening, looking seaward there suddenly came upon the pilot's view the great Oregon, the Texas, the Iowa and other battleships awaiting the enemy with their guns levelled upon the harbor, whereupon the pilot swiftly stepped to the ship's side and leaped overboard, preferring to trust his life to the treacherous sea which he knew so well rather than face the fiery storm of shot and shell which he knew was soon to come. The result proved the pilot's wisdom. I have been ordered by one of your officers, whose imperial commands are given with evidence of high authority, to appear before this body as an outsider and tell you to your faces what I think of you. Stepping on the platform in an effort to perform my assigned duty I find myself confronted, as I believed I would be, by an array of

VETERAN WARRIORS OF TRADE AND COMMERCE,

whose victories in the battles of life are well known. At my right I see Minnesota. There is Oregon and New York, Massachusetts and California, and many others. You are too old in the arts of rhetoric to desire an eulogy; in fact you invite the worst. Should I or my friends assume to give criticism or impart advice then you might well reply to us as did Job to Zophar, the Naamathite, and his friends, when in reply to their advice he said to them: "Ye believe that ye are the people and that wisdom shall die with you." Nevertheless, we will briefly survey you as individuals and as an association report as we proceed and then jump overboard.

We are convinced that each of you has at his command or in his warehouse enough guns and ammunition, pistols and knives to equip a pirate ship or to stock an arsenal. Nearly every outlaw and train robber in the land, either directly or indirectly receives these death-dealing supplies from your stock. Having thus equipped them you then seek to furnish the hand-cuffs with which to bind them, the nails to fasten their coffins, and finally the shovels to cover them. As if to

JULIUS C. BIRGE.

follow their requirements even further I am informed that some of you are advertising refrigerators. You get them "a comin' and a goin'."

But there are bright faces and women by the side of you which indicate that you are in the soft light of a better influence.

Among your number I see men who are known to have been active in works of charity and in deeds of patriotism, and who are laboring for the social, moral and material elevation of the communities in which they live.

With some knowledge of the history of your trade for many years, it appears that from among the thousands who in the past have embarked upon a career similar to your own, entering the hurlyburly of life, passing through the ups and downs of business, the crash of financial storms and the withering blight of trade depression, many falling by the way-side, you with a few others whom you call eligibles have passed the ordeal and remain to be

PLACED ON THE ROLL OF HONOR AMONG THE SUCCESSFUL HARDWARE MERCHANTS

of America. I say American merchants—Tyre sent her traders to northern Africa. Venitian merchants skirted the Mediterranean and far beyond. In late years European merchants have with much success struggled for the markets of the world, but it is doubtless safe to assert that not in all time or in any country than our own has there been a single merchant who has controlled a volume of business of your branch of trade equal to that which is controlled by some merchants now in this room, and the greatest Hardware market in the world is the United States of America.

I recognize your brothers from Our Lady of the Snows whom you have cordially welcomed. Only by a matter of chance 100 years ago through the uncertain fortunes of war we might have been they, or they might have been we. Either result would have been serious, for we are chiefly one blood, having the same spirit of liberty and enterprise.

Digitized by Google

Having considered the factors which enter into your organization we glance at your association. Your chief work is doubtless in secret—in those mysterious executive sessions shut off from the world. This we cannot analyze. If at any meeting you settle one misunderstanding between two members and correct one error your organization is securing a benefit.

LIFE IS NOT FOR BUSINESS, BUT BUSINESS IS FOR LIFE.

Therefore, if during this convention, having escaped the battle and rush of your store you will unbend the bow for a day and look out upon that ever changing ocean with its suggestions of infinity, and on to-morrow evening you will sit with your friends in the social occassion prepared for us and remain until the delicate blue smoke rises above you—an emblem of peace—it will pay you. It is much to be a brother merchant, but more to be his friend. Therefore, if through your organization you can remove any cause of friction and make a friend of a competitor, it pays.

If you, by exchange of views can learn the best methods of business and keep abreast of advanced ideas, it pays.

You have problems to solve and we manufacturers have some of them with you.

IT IS NOT THE CLOSE BUYERS THAT THE MANUFACTURER FEARS so much as the merchant who is a reckless seller. You have the same fear. The reckless seller is like the mule in the dairy room; it kicks over the cans of milk in which he cannot put his feet and starves to make others suffer. If you can induce one mule to put some of the milk in his stomach instead of putting his feet in the cans it would pay.

You have struggles with problems arising from the distribution of goods through avenues which to many seem unnatural. The freight department of the postal service may be an advantage to catalogue houses. I think it can be shown to be a disadvantage to farmers, retailers and jobbers. A fair investigation of this matter would pay.

I would gladly speak of your relations with the manufacturers' associations which have been pleasant, and I trust mutually advantageous. They would not likely be pleasant were you and they to become competitors in your legitimate field. Your secretary who has to my knowledge often met bodies of manufacturers has represented your interests with courtesy and ability.

You know it is written that at the building of King Solomon's temple there was heard neither the sound of axe, hammer or any tool of iron—how the Hardware trade must have languished in Jerusalem.

In time we all will be in a country where those sounds will not be heard,

WHERE HARDWARE MAY NOT BE USED

and where associations never break up.

There from the standpoint of a true outsider we may conclude that all influences and organizations, which while advancing material prosperity and adding to knowledge have also made for peace and good-fellowship, are of value.

If they have helped to pull men out of the narrow rut of their individual lives and lead them to honor, respect and cooperate with their fellowmen they have been of value.

All these conditions and many more I believe are clearly within the scope of your association.

President Kirk then introduced Mr. Charles F. Smith of Landers, Frary & Clark, New Britain, Conn., who spoke as follows:

JOBBERS' ASSOCIATION AS VIEWED FROM AN OUTSIDE STANDPOINT.

By Charles F. Smith.

You ask me to speak of the National Jobbers' Association as it looks to an outsider. I confess I find it difficult to speak from that standpoint.

THE MOST POWERFUL OF ALL THE TRADES OF MAN.

There rises in my mind a picture of this great Hardware trade in which we are all engaged. It is a trade the most ancient as it is the most powerful of all the trades of man. In this industrial age and in this the greatest of all industrial nations it stands supreme. Whether we look at the thousand articles man uses in his home, his buildings, his bridges, his railroads and vehicles that carry him by land, the palaces in which he crosses the sea, and the armadas with which he protects his coasts, the instruments of his agriculture, the weapons of his battles, or the monuments he raises to his own adornment and glory, there you shall find everywhere mightily embodied the work of the artificers of iron, of bronze and of steel.

In the background of this picture we see far off the myriads of miners digging out of the earth here and beyond the sea, the materials of this great trade; then nearer, the hosts of men engaged in the manufacture of its cruder forms. We have a dim but vast vision of the numbers employed in the tributary trades, and more clearly, because near at hand, we see both that great industrial army which turns these cruder forms into finished products, and those great mercantile organizations which distribute those products to the consumers.

THAT MUTUAL RELATIONSHIP AND DEPENDENCE UPON ONE ANOTHER.

Looking upon this picture and thinking alike of the splendid achievments and vast numbers of the men who with their wives and children depend for their living upon this great trade, we shall find it not only a majestic but a moving spectacle, one that touches the chords of human sympathy so that we feel a common pride, a common interest, and a sense of that mutual relationship and dependence upon one another, which all unseen yet surely does unite every man in the Hardware trade, from the laborer in the mine to the merchant in his warehouse.

Holding these sentiments, you must see how difficult it is for me to consider myself as an outsider, or speak to you fittingly from that standpoint. The more I consider the matter, the more strongly am I impressed with the intimacy of the relations that exist between the makers and the distributors of Hardware. We are parts of one great machine and neither can be affected but that the other feels it. When the goods move freely out of your warehouses, then the wheels of our factories will be found turning busily. When your salesmen find orders difficult to get in Oregon, Texas and Maine, then the fires go out in the mills of Pittsburg, the wheels stop turning in the factories of New England, and the struggle for existence grows harder in the countless homes of the workers. All these are truisms you may say. So indeed they are, but it is well at times to consider the truisms. It would have been better for the country at large if in these last few years more thought had been given to the truisms and less to the "isms" that are not true. And be they truisms or not, I am sure I speak the thought of all Hardware manufacturers when I say that your failures are our failures; that your successes are our successes, and that we are so intimately connected in this great and complex business that in no true sense can we be considered as outsiders. At any rate, holding such sentiments you will hardly expect from me any hostile criticism of your Association.

IT IS ALWAYS EASY TO CRITICISE.

It is always easy to criticise. For one man who tries to do something, there are always a dozen others who could tell him how to do it better, but who somehow never do much better themselves. You, I think, know better than we do how far you have failed to realize your own expectations, just as we manufacturers realize our own shortcomings. It is, perhaps, more fitting, and at any rate a more pleasant duty that we as manufacturers should bring to your councils instead of criticism, whatever we can of aid, of comfort, of appreciation, and good cheer. We realize the difficulty of the task you have undertaken. We know from our own experience how difficult it is for even half a dozen rival manufacturers to legislate wisely, fairly and successfully for the governing of their own particular branch of industry. You have a much more difficult task. It is continental in size for your organization covers a continent in its membership. Never, so far as I have read, has an attempt been made in any country, or in any business, to establish methods for conducting for the mutual advantage of its members, an organization covering so vast a field, with a membership so numerous, with interests so diverse, dealing in such a varied line of goods, or doing so great a volume of business. Your task, I repeat, is continental in size. Is it any wonder then that you move slowly? It is a greater wonder that you have been able to move at all. That you have been able to hold your organization together all these years

Digitized by Google

is itself an achievement to be proud of, and moving along the broad lines which the conditions of your organization make necessary, you have certainly made progress that you and we are conscious of. I confess that I have not always taken this view, but I am sure that no manufacturer who considers fairly the size of your task and its difficulty can help feeling respect, sympathy, and admiration for the effort you are making to carry on your work.

DEVELOPING A MUTUAL TOLERATION, SYMPATHY AND CO-OPERATION.

It is not my purpose to speak of what you have accomplished within your organization for the betterment of the

O. B. BARKER,
OF FRATERNAL RELATIONS COMMITTEE.

Jobbers of Hardware. What you have done you know better than we. I wish it were more. I hope it may be, for as I have said before, your success is ours. Let me give you this thought when you get despondent, if you ever do, because you have not been able to accomplish more, it is but fair to consider what would be the conditions in the Hardware Jobbing trade if your organization did not exist. Contrasting that condition with what you now enjoy, you will find, I am sure, reason enough in that alone to congratulate yourselves. For I hold that no body of men can get together year after year as you have done, working away together at the problems surrounding your business, without developing a mutual toleration, sympathy and co-operation which by some fine alchemy which I will not attempt to explain, but which is to the credit of our poor human nature, is actually transmitted into dollars and cents on the right side of your balance sheets.

With this brief reference to what you have done for yourselves, I pass to the consideration of what you have done for us, the manufacturers. You have made us welcome at your conventions. You have enabled us to meet in two or three days time your members gathered from all over the country. Some of you under ordinary circumstances we never should have met, certainly not all without months of time spent in traveling. The heads of the Jobbing Houses have met the heads of the Manufacturing Establishments, and the work of your buyers and our salesmen has been supplemented and made more effective by this acquaintance.

A FEELING OF FRIENDLINESS THAT DID NOT EXIST BEFORE.

Sometimes we know that our presence must have been inconvenient to you, but your courtesy has never made us conscious of the fact. And out of these acquaintances there has grown a feeling of friendliness that did not exist before —a mutual understanding of each other's difficulties that could have been reached no other way. That mutual understanding and friendly feeling has been of great advantage to us. It has, I know, been of some advantage to you also. If you really for the moment want to consider us as outsiders and want our opinion of your organization we are all ready to say that if you have done nothing else your organization has a right to be called a success for that friendly feeling that it has infused into the relations between the Jobber and the Manufacturer.

I referred a moment ago to that alchemy which transmitted into gold the influence that arises from your association together as jobbers. I believe that in a similar way the influences that arise from the association at your conventions of manufacturers and jobbers are working for the substantial benefit of both parties. To disbelieve that is to doubt that the world is growing better or that men and associations do in the long run make some advance along the line of their finer feelings and more generous ideas.

I perceive a more frank appreciation by jobbers and manufacturers of the difficulties of each other's position. I notice a greater readiness on the part of the jobber to co-operate with the manufacturer—a livelier interest on the part of the manufacturer that the jobber shall make a profit on his goods, an interest so lively at times that it takes the form of gentle coércion and forces the jobber to make money in spite of himself. Now if I am right in thinking I see these tendencies, and I think I am, then by so much as you legislate to foster these tendencies, by so much will you hasten the process of getting the most substantial results out of these meetings.

A good deal of water has run under the bridges since your last convention, and many things have happened. Aladdin with his wonderful lamp and his hydraulic pump has disappeared.

THE WORLD OF BUSINESS IS DISENCHANTED.

We see things as they are, we know that the arithmetic of our boyhood was right after all, that 2 + 2 actually do make 4 and not 11 or 8, that one dollar in gold and 10 barrels of water mixed together do not make a fortune, but only just

IRBY BENNETT.

one dollar and such other value as the water has for drinking and household uses.

We know

THERE IS NO SWIFT ROAD TO WEALTH THAT IS SAFE,

that the Napoleons of finance usually march through ruin and desolation to moral or financial St. Helenas, and pondering these things we are going to be more contented to do business in the safe and conservative way that has given the Hardware trade such soundness and stability. But if the country has learned these things, it has lost something in the learning, and that loss both of money and of confidence may make it harder to do business for a while, and if it is for a while going to be harder to do business there is all the more reason for forbearance, patience and mutual co-operation and assistance between the jobber and manufacturer.

Digitized by Google

The improvement of those relations has been one of the greatest results of your work. That you will continue to foster those relations we implicitly believe, and so we extend to you our congratulations on this the Ninth Convention of your National Association. We promise you our co-operation, and wish you long life and prosperity.

Wednesday Afternoon, Nov. 18.

The jobbers met in executive session Wednesday at 3 p. m. President Kirk was in the chair.

The reports of the Committee on Membership, Transportation, Press, Metal, Heavy Hardware, Entertainment and Grievances were listened to and the handling of ammunition was discussed at some length.

President Kirk appointed the following committee on nominations: C. A. Knapp, Sioux City, Ia.; John Freeman, Detroit; Chas. H. Turner, Albany, N. Y.; W. D. Krenson, Savannah, Ga.; J. G. Brown, Boston, Mass.; Geo. A. Braun, Toledo, O.; H. J. Lee, Omaha, Neb.

At 5 p. m. the convention adjourned.

After adjournment a meeting of the dealers interested in the sale of metals took place. The manufacture and sale of tin was discussed at some length. The meeting of those interested in heavy Hardware was postponed to a later date.

During the afternoon the lady visitors were entertained on Young's Pier by Ringgold's Band.

Smoker.

On Wednesday evening the conventioners assembled in the Rudolph "Grotto" as guests at a smoker given by the Hotel. Refreshments both solid and liquid were supplied in generous quantities and souvenir pipes were given to those present. Music was furnished by Ringgold's Band and a very good vaudeville entertainment kept the visitors merry until a late hour. The program included a musical specialty, juggling, monologues, impersonations, cake walk and ventriloquist. The performers were not by any means amateur and the Philadelphia Hardware Merchants and Manufacturers' Association, by whom this part of the program was furnished, deserve the thanks of both Associations.

Thursday Morning Session.

This session was devoted to the discussion of the relation of the jobber to the manufacturer.

A portion of the report of the executive committee was read and discussed and at 12:45 the convention took a recess until 3 P. M.

At the close of the meeting the members of the association interested in the sale of heavy Hardware met and discussed the condition of their business. The matter of selling horseshoe nails was discussed at length and resolutions adopted for the regulation of the trade.

Thursday Evening.

The conventioners assembled after dinner in the Rudolph Grotto, where they were entertained by the Ringgold Band, of Reading, Pa. At 10.30 all who wished participated in a dance in one of the parlors, where their feet kept time to the music until a late hour. The presence of an unusually large number of ladies made this feature of the program an enjoyable one.

Friday Morning Session.

The jobbers were called to order at 10 A. M. Uncompleted business of the previous day's executive session was taken up.

The report of the Executive Committee was considered and the recommendations contained therein and the question was discussed at length as to the best plan for estimating the cost of goods and securing a reasonable profit, and the regulation of prices made by salesmen.

The president appointed the following committee on resolutions:

W. D. Taylor, Cleveland, O.; H. L. Doten, Boston, and J. L. Boucher, Rochester, New York.

Friday Afternoon Session.

At 3 P. M. the jobbers' association continued the executive session of the forenoon.

Important matters were considered relating to the question of prices on various commodities in the Hardware line and the relations of the jobbers to the manufacturers.

The report of the treasurer was read, showing the finances of the association to be in a flourishing condition.

The place of holding the next annual meeting was next taken up. Invitations were read from various cities, particulraly from St. Louis, offering accommodations. The general sentiment of the members seemed to be that Atlantic City offered the most attractions, especially in point of ample hotel room, which heretofore had been the greatest drawback, and it therefore was unanimously selected as the place of next meeting.

The report of the committee on nominations was called for. The committee reported the following:

For president, Samuel A. Bigelow, of Boston.

For first vice-president, Hon. John C. Koch, Milwaukee, Wis.

For second vice-president, Brace Hayden, of San Francisco.

For members of the Executive Committee to serve three years to fill vacancies—Capt. Frederic Barker, Elmira, N.Y., in place of Mr. Bigelow, and J. D. Moore, Birmingham, Ala., (re-elected).

On motion the report of the committee was adopted and the secretary was requested to cast the vote of the association for the members nominated. They were declared elected.

After the election of officers the doors were thrown open and all manufacturers, ladies and visitors were invited to attend the closing exercises.

The retiring officers made short addresses. A prosperous future was predicted for the association. The ladies were complimented for their numerous attendance.

The following resolutions were adopted:

Resolved, That the thanks of this Association be and are hereby tendered to those who have in various ways added to the pleasure of this, the most satisfactory and most largely attended convention this association has ever held.

The ladies have added much to our enjoyment and have very kindly permitted their husbands to give strict attention to our business sessions. For this they are to be highly commended.

We also desire to tender our thanks to the Rev. John R. Davies, pastor of the Bethlehem Presbyterian Church, of Philadelphia, who opened our exercises with prayer.

Our thanks are also tendered to Charles H. Meyers, proprietor and owner of Hotel Rudolf, who has exhausted every effort to cater to our physical comfort during the days of our convention. At no convention of this association have we ever been more satisfactorily entertained.

We also desire to acknowledge the courteous treatment of the manager of the Hotel Rudolf, Mr. Wm. E. Cochrane, and also the head room clerk of the hotel, Mr. M. L. Ott, as well as all other attaches of the house.

Our thanks are also tendered to Mr. J. H. Van Newkirk, who has efficiently acted as journal secretary of the convention. We also desire to extend our thanks to Thomas A. Fernley, the railroad secretary of the convention, and to Col. Bob. Dudley, Jr., and Geo. A. Fernley, who have acted as pages of the convention.

On motion the convention adjourned *sine die*.

At the close of the convention the visitors, ladies and members filed by the table of the presiding officers and were presented to the retiring officers and ex-presidents by Secretary-Treasurer T. James Fernley.

At roll call, Wednesday, the following jobbers and representatives reported present:

ALABAMA.

J. D. Moore; Moore & Handley Hardware Company, Birmingham.

CALIFORNIA.

Brace Hayden, C. W. Gause; Dunham, Carrigan & Hayden Company, San Francisco.

CONNECTICUT.

Col. R. S. Woodruff; C. S. Mersick & Company, New Haven.

GEORGIA.

George E. King; King Hardware Company, Atlanta. A. B. Palmer; Palmer Hardware Company, Savannah. W. D. Krenson.

ILLINOIS.

Geo. W. Trout; Trout Hardware Company, Chicago. Chas. D. Clark; Clark, Quien & Morse, Peoria. Rudolph Tenk; Tenk Hardware Company, Quincy. C. M. Hurst, Morehouse & Wells Company, Decatur.

INDIANA.

C. Van Camp; Van Camp Hardware and Iron Company, Indianapolis.

IOWA.

C. A. Knapp; Knapp & Spencer Company, Sioux City. E. D. Adams; Drake Hardware Company, Burlington. F. E. Cutler; Cutler Hardware Company, Waterloo.

KANSAS.

J. G. Bauer; W. A. L. Thompson Hardware Company, Topeka. F. W. Martin; Hockaday Hardware Company, Wichita. W. H. Harwi; A. J. Harwi Hardware Company, Atchison. J. B. Silliman; Blish, Mise & Silliman Hardware Company, Atchison.

KENTUCKY.

Henry Terstegge; Stratton & Terstegge, Louisville.

MAINE.

William Chamberlain; The Emery-Waterhouse Company, Portland, Me. F. Walker; Edwards & Walker Company, Portland, Me. C. F. Bragg; N. H. Bragg & Sons, Bangor.

MASSACHUSETTS.

Samuel A. Bigelow; Bigelow & Dowee Company, Boston. Albert M. Wiley; Frye, Phipps & Company, Boston. John H. Robbins, Austin H. Decatur; Baldwin, Robbins & Company, Boston. John G. Brown, Brown-Wales Company, Boston. Peter E. Strauss; Fitz, Dana & Company, Boston. Geo. W. Herrick; Holden & Herrick, Boston. Harry L. Doten; Austin & Doten, Boston. Arthur C. Harvey; The Arthur C. Harvey Company, Boston. H. W. Waite; Waite, Ranlet & Company. George F. Blake, Jr., & Company, Worcester. Charles C. Lewis; Chas. C. Lewis & Company, Springfield.

MICHIGAN.

J. G. Standart; Standart Brothers, Limited, Detroit. John Freeman; Freeman, Delamater & Company, Detroit. Buhl Sons & Company, Detroit. Edward W. Morley; Morley Brothers, Saginaw. C. C. Philbrick; Foster, Stevens & Company, Grand Rapids.

MINNESOTA.

Major T. G. Walther; Hackett, Walther, Gates Hardware Company, St. Paul. R. A. Kirk, F. W. Hurty, Frank B. Platt; Farwell, Ozmun, Kirk & Co., St. Paul.

MISSOURI.

J. A. Warner; Wyeth Hardware and Manufacturing Company, St. Joseph.

MONTANA.

D. P. Patenaude; A. M. Holter Hardware Company, Helena. N. S. Little; Missoula Mercantile Company, Missoula

NEBRASKA.

H. J. Lee, J. G. M. Anderson; Lee-Glass-Andreasen Hardware Company, Omaha.

NEW HAMPSHIRE.

C. A. Adams; John B. Varick Company, Manchester.

NEW YORK.

Charles H. Turner; Albany Hardware and Iron Company, Albany. Hobart Weed, L. C. Davenport; Weed & Company, Buffalo. Sidney Shepard & Company, Buffalo. Capt. Frederic Barker. Irving D. Booth; Irving D. Booth, Elmira. B. A. Hawley, J. H. Van Newkirk, T. J. Usher, Edw. Meyer, J. D. Russel; Russell & Erwin Manufacturing, New York City. Alfred D. Clinch; Underhill, Clinch & Company, New York City. Sargent & Company, New York City. J. W. Black; Burhans & Black Company, Syracuse. Gen. C. Whitney Tillinghast. J. H. Underwood, Fred. Hinds; Babcock, Hinds & Underwood, Binghamton.

NORTH CAROLINA.

Charles H. Ireland; Odell Hardware Company, Greensboro.

OHIO.

H. H. Bishop; The McIntosh Hardware Corporation, Cleveland. W. D. Taylor; The George Worthington Company, Cleveland. E. H. Leutkemeyer; H. W. Leutkemeyer & Sons, Cleveland. Felix Bahlmann; The Krause & Bahlmann Hardware Company, Cincinnati. Thomas F. Smith; The Smith Brothers Hardware Company, Columbus. George A. Braun; Bostwick, Braun & Co., Toledo.

PENNSYLVANIA.

William W. Supplee, E. S. Fogg, N. F. Cressman, Frank W. Huff, Nelson Perine, Chas. A. Huff, Walter W. Watt, James D. Green, James S. Bonbright; Supplee Hardware Company, Philadelphia. John R. Griffith, Paul A. Griffith; Shields & Brother, Philadelphia. Chas. M. Biddle, James H. Ritter, Chas. M. Biddle, Jr., Robt. Biddle, 2d, Edward Knight, C .C. Read; Biddle Hardware Company, Philadelphia. H. F. Charley; Newlin-Knight Hardware Company, Philadelphia. William C. Peters; James M. Vance & Company, Philadelphia. John R. Seltzer, S. Spencer Scott, R. J. Maharg, Thomas Nelson; Seltzer-Klahr Hardware Company, Philadelphia. Clarke Merchant, J. A. McKee; Merchant & Company, Philadelphia. J. P. Balderston; W. F. Potts, Sons & Co., Philadelphia. William T. Gummey; Gummey, McFarland & Company, Philadelphia. Z. T. Hall; Hall & Carpenter, Philadelphia. T. James Fernley, Thomas A. Fernley; T. James Fernley, Philadelphia. John Bindley, E. J. Lloyd; Bindley Hardware Company, Pittsburg. P. L. Logan, Robt. M. Repp; Logan-Gregg Hardware Company, Pittsburg. A. J. Bihler, J. O. Fitzsimmons; James C. Lindsay Hardware Company, Pittsburg.

RHODE ISLAND.

J. H. Congdon, H. E. Nickerson; Congdon & Carpenter Company, Providence.

TENNESSEE.

Bruce Keener; C. M. McClung & Company, Knoxville. W. G. Thomas; Thomas, Barnes & Miller, Memphis. Col. Robert Dudley, Col. Bob Dudley, Jr.; Gray & Dudley Hardware Company, Nashville. J. H. Fall, J. H. Fall, Jr.; J. H. Fall & Company, Nashville.

VIRGINIA.

John Donnan; The W. S. Donnan Hardware Company, Richmond.

WEST VIRGINIA.

W. P. Heiskell; Ott-Heiskell Hardware Company, Wheeling, W. Va.

WISCONSIN.

Hon. John C. Koch; John Pritzlaff Hardware Company, Milwaukee. John C. Kroner; Frederick Kroner Hardware Company, La Crosse. L. Gotfredson; Gotfredson Brothers Hardware Company, Green Bay.

On Thursday the following letter was read before the Jobbers:

T. J. Fernley, Esq., Secretary-Treasurer of National Jobbers' Hardware Association

In order that our relation with the Post Parcel subject may be clearly defined, we desire to state that at a meeting of the Manufacturers' Association yesterday announcement was made that our company had contributed and was in accord with the movement to secure legislation that would reduce the cost of distributing product. Since this contribution was made our views on this subject have changed very materially and we appreciate the fact that the passage of such a bill would be a very serious embarrassment to our friends the Hardware dealers of the country.

We would be pleased to have you announce at an early meeting of your association that we will use all legitimate means in our power to secure the defeat of this movement. We are in hearty accord with the sentiments expressed by the President of the Jobbers' and Retail Association and have reason to believe that the project will not receive favorable consideration in Washington. We remain,

Yours Very Truly,
P. & F. CORBIN,
C. H. PARSONS, 2d Vice-President.

WHAT SUCCESS MEANS IN AMERICA.

An article in *Everybody's Magazine* for November on "Successful American Men Who Are Not Rich" contains the following observations that many of our foreign readers will read with interest:

"'Brains may be more important than money, but nowadays the best way to convince the world that you have brains is to make money.'

"This remark was made within a year, not by the head of a trust, but by a distinguished and scholarly lawyer, prominent in national affairs, before a class of law students. It was a neat way of putting an almost unanimous conviction; it has only to be stated for nearly every one to give it a smug approval. Thirty years ago the country at large didn't know the names of many of New York's rich men, or Boston's, or Chicago's. But to-day almost every reader of the daily press could name, without stopping to coach himself, from twenty to forty of the very rich men of the United States.

"These are heroes of success. When magazines give accounts of successful men, it is the heroes who have subdued competitors in the acquirement of vast financial power. The successful men pointed out for to-morrow are the virile handlers of business.

"All this is because we, the people, now believe in our hearts and confess with our mouths, that the getting of wealth is the most fascinating operation in the world, and that the getters of wealth are the most interesting personages in the world, and that their success is almost the only success that is imperative. We have fallen under a universal witchcraft."

AMERICAN HARDWARE MANUFACTURERS' ASSOCIATION.

FIFTH CONVENTION.

OFFICERS AND COMMITTEES.

Following are the officers and the members of the different committees of the American Hardware Manufacturers' Association:

PRESIDENT.

Fayette R. Plumb, Fayette R. Plumb (Incorporated), Philadelphia, Pa.

VICE-PRESIDENTS.

F. S. Kretsinger, Iowa Farming Tool Company, Fort Madison, Iowa.
J. C. Birge, St. Louis Shovel Company, St. Louis, Mo.
George W. Corbin, Corbin Cabinet Lock Company, New Britain, Conn.

SECRETARY-TREASURER.

F. D. Mitchell, 482 Bourse Building, Philadelphia, Pa.

EXECUTIVE COMMITTEE.

C. W. Asbury, chairman, Enterprise Mfg. Company, Philadelphia, Pa.
Robert Garland, Garland Nut & Rivet Company, Pittsburgh, Pa.
N. A. Gladding, E. C. Atkins & Co., Indianapolis, Ind.
Frank L. Clark, Alabama Tube & Iron Company, Birmingham, Ala.
Henry B. Lupton, Oliver Iron & Steel Company, Allegheny, Pa.
W. S. McKinney, McKinney Mfg. Company, Allegheny, Pa.
H. C. Holt, the Lamson & Sessions Company, Cleveland, Ohio.
Geo. M. Landers, Landers, Frary & Clark, New Britain, Conn.

MEMBERSHIP COMMITTEE.

William H. Hays, chairman, Iron City Tool Works, Pittsburgh, Pa.
Geo. P. Hart, the Stanley Works, New Britain, Conn.
Edward Ingalls, the Atha Tool Company, Newark, N. J.
D. W. Simpson, Wilcox Mfg. Company, Aurora, Ill.
E. G. Buckwell, Cleveland Twist Drill Company, Cleveland, Ohio.
Gifford V. Lewis, Old Dominion Iron & Nail Works Company, Richmond, Va.
Tom Almgill, G. & H. Barnett Company, Philadelphia, Pa.
Edward Kemp, Wabash Screen Door Company, Chicago, Ill.
George H. Bishop, George H. Bishop & Co., Lawrenceburg, Ind.

GRIEVANCE COMMITTEE.

Oliver Williams, chairman, Bryden Horse Shoe Company, Catasauqua, Pa.
Alfred W. Barnett, G. & H. Barnett Company, Philadelphia, Pa.
W. T. Norton, Norton Tool Company, West Park, Ohio.
George H. Harper, Clendenin Brothers, Baltimore, Md.
P. B. Noyes, Oneida Community, Limited, Kenwood, N. Y.

RECEPTION COMMITTEE.

Henry B. Lupton, chairman, Oliver Iron & Steel Company Pittsburgh, Pa.
T. B. Coles, American Steel & Wire Company, New York City.
Tom Almgill, G. & H. Barnett Company, Philadelphia, Pa.
Fred S. Merrick, Standard Horse Nail Company, New Brighton, Pa. Pa.
W. C. Reitz, Pittsburgh Steel Company, Pittsburgh, Pa.
F. W. Davis, Lake Erie Iron Company, Cleveland, Ohio.
Fred. I. Johnson, Iver Johnson's Arms & Cycle Works, Fitchburg, Mass.
George P. Hart, the Stanley Works, New Britain, Conn.
Edward Ingalls, the Atha Tool Company, Newark, N. J.
E. G. Buckwell, Cleveland Twist Drill Company, Cleveland, Ohio.
George A. Baird, Republic Iron & Steel Company, Chicago, Ill.
George M. Landers, Landers, Frary & Clark, New Britain, Conn.
Chalmers M. King, McKinney Mfg. Company, Allegheny, Pa.

Wednesday Afternoon Session.

The opening session of the Manufacturers' Association took place in the "Grotto" of the Hotel Rudolph Wednesday at 3 P. M, with the chair occupied by President Plumb, who opened the meeting with the following address:

ANNUAL ADDRESS.

By President Fayette R. Plumb.

Gentlemen:

I have the honor to bid you welcome to the fifth meeting and the second annual convention of the American Hardware Manufacturers' Association. Let me express the hope that your stay here will not only prove pleasant, but that the breezes wafted to us from the grand old ocean so close to our doors may bring balm and comfort to those of you who have become worn by the season's work and that for this reason all of you may feel fully paid for your journey here. Our committee, I feel sure, had not only this in mind when they selected this place for our meeting, but they also felt that you would have more time to devote to Association work and that you would, therefore, endeavor to make this the most interesting meeting of any yet presided over by your President.

While our Association is prosperous and

WE ALL FEEL PROUD OF OUR MEMBERSHIP

because of those associated with us, let me impress upon you the fact that you do not show the interest in its future that the management has the right to expect from you. You should not be contented until you have included in its membership every reputable Hardware manufacturer in the United States. In addition to this, we should show more in-

FAYETTE R. PLUMB,
PRESIDENT.

terest in the proceedings and endeavor, by concerted action, to prove that we are determined to win the approval and admiration of those who remain at home and make it easy for us to be here. There are so many abuses which might be overcome by earnest endeavor that I am surprised at the indifference shown.

At every meeting I have alluded to some of the most objectionable evils presented since we became an important factor in the trade and I think it proper to again bring them before you in order to freshen your memory in regard to the views expressed on the floor and the support extended at the time they were discussed. The chief of these evils are:

Cash Discounts.
Contracts.
Special Brands.
Contributions to Catalogues.
Guaranteeing Prices.
Packing Small Orders for Direct Shipment Without Extra Charge.
Deduction of Cash Discount from the Gross Instead of the Net Amount of the Invoice.

All these subjects are interesting because they have a direct bearing on our profits.

Digitized by Google

While I believe

THE ABUSES ARISING FROM CASH DISCOUNTS AND CONTRACTS HAVE BEEN ELIMINATED

to a great extent, the evils arising from the manufacture of special brands are increasing rather than diminishing and while I don't think it is possible to wipe them out entirely I do believe that they can be greatly curtailed if we are determined to make a record in our efforts to correct these abuses. It strikes me that the proper way would be to charge more than for factory brands. If cost is to be considered, we certainly should be justified in such action.

Although a resolution was passed at a previous meeting expressing our disapproval in the contribution to customers' catalogues yet these abuses still continue. In fact, appeals for such assistance are increasing and have become so great that it is imperative that a resolution be submitted at this meeting re-affirming in strong terms our former position on this subject—and do not let our action stop here, but let us hope that every member will make a firm resolution in every instance by firmly standing by the decision of the Association. While I should not go so far as to refuse to furnish electrotypes to illustrate our goods, I believe I express the sentiment of the great majority of the Association when I say

F. D. MITCHELL,
SECRETARY-TREASURER.

WE SHOULD NOT BE EXPECTED TO PAY THE COST OF CATALOGUES

any more than to assume the other expenses of marketing our customers' wares.

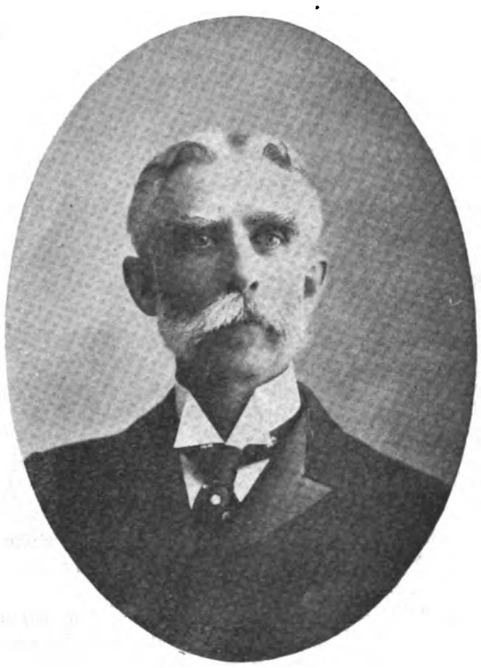
The other subjects mentioned, namely, guaranteeing of prices, packing small orders for direct shipment, deduction of cash discount from the gross instead of the net amount of invoices have not as yet received proper consideration. We have, therefore, plenty of work mapped out for us and I sincerely hope our executive meetings will be well attended and that all will take part in the discussions. If you will do this, we can accomplish something that will redound to our credit as long as our Association lasts.

The proceedings at Saratoga were published in detail and are in possession of every member and I hope all of you have taken the time to read them, especially the addresses of the invited guests.

It is not only a duty I owe to this convention but a source of pride and pleasure to call your particular attention to the able remarks of Mr. Daniel Davenport concerning "Boycotts, and How They Can be Destroyed."

There is no man in the country who has done more practical work in this direction than Mr. Davenport. Through his influence, an association known as "The American Anti-Boycott Association" has been formed

TO FIGHT THIS UNLAWFUL AND TYRANNICAL EVIL



and it should have the unqualified support of all manufacturers in every line. The work already accomplished has been far beyond the hopes of the most sanguine members and has been of incalculable value to every law-abiding citizen in the United States. They have taken the ground that the boycott is a conspiracy created to deprive the manufacturer of the liberty bequeathed to him by those who founded our government and is in violation of our laws and in justification of this belief they have arrested and prosecuted the labor leaders who have attempted to enforce it. Those of you who have followed Mr. Davenport's work in Chicago during the strike last Summer know of what great assistance he was to the manufacturers in that city. Scores of leaders were arrested and imprisoned and public opinion was aroused to such an extent that the labor agitators were compelled to recall their action.

What we need are more leaders like Mr. Davenport, "Who have no axes to grind" and can battle for our rights without fear or favor; those who will arouse public sentiment in our behalf and stand for what is right and just.

THE GREAT MAJORITY OF OUR CITIZENS ARE IN FAVOR OF FAIR PLAY

and when they can be shown that we want nothing but justice they will flock to our support.

No manufacturer, I take it, objects to labor unions if conducted in a proper manner for the betterment of their members: but when they attempt to interfere with the right of an employer to discharge or employ whom he pleases they are performing an illegal act and there should be a way to punish them for it. Until this is accomplished labor troubles will constantly confront us and interfere greatly with our ambition to control the markets of the world.

F. S. KRETSINGER,
VICE-PRESIDENT.

It is inconceivable that labor should be so blind as to stand in its own light at a time when co-operation between employers and employees is not only essential to win our battles with other nations; but to preserve and promote trade at home. The conditions at the present time are so diametrically opposite that the continuance of

THE PRESENT PROSPERITY IS THREATENED UNLESS THE LABOR LEADERS ARE SHOWN THEIR FOLLY.

The recent conviction and imprisonment of one of the most notorious of their schemers has cleared the atmosphere somewhat and prevented another disastrous strikes among the iron workers.

The State of Alabama has shown that her citizens are true Americans and believe in fair play by recently passing an anti-boycott law; this bill received a large vote and provided a fine of not less than $50 and not over $500 or imprisonment at hard labor for 60 days for persons convicted of boycotting, blacklisting, picketing and similar assaults upon the rights of individuals. As most of you may not have seen the account of it as published in the Daily Bulletin of

Digitized by Google

the Manufacturers' Record, I have thought it best to give you the text of the law, as follows:

Section 1. Be it enacted by the Legislature of Alabama, that it shall be unlawful for two or more persons to conspire together for the purpose of preventing any person, persons, firm or corporation from carrying on any lawful business within the State of Alabama or for the purpose of interfering with the same.

Section 2. That it shall be unlawful for any person or persons to go near to or loiter about the premises or place of business of any person, firm or corporation engaged in a lawful business for the purpose of influencing or inducing others not to trade with, buy from, sell to or have business dealings with such person, firm or corporation, or to picket the works or place of business of such other person, firm or corporation, for the purpose of interfering with or injuring any lawful business or enterprise.

Section 3. That it shall be unlawful to print or circulate any notice of boycott, boycott cards, stickers, dodgers or unfair lists, publishing or declaring that a boycott or ban exists or has existed or is contemplated against any person, firm or corporation doing a lawful business or publishing the name of any judicial officer or other public official upon any blacklist, unfair list or other similar list because of any lawful act or decision of such official.

Section 4. That it shall be unlawful to use force, threats or other means of intimidation to prevent any person from engaging in any lawful occupation at any place he or she sees fit.

Section 5. That it shall be unlawful for any person, firm or corporation to maintain a blacklist or to notify any other firm or corporation that any person has been blacklisted by such person, firm or corporation, or to use any other similar means to prevent such persons from receiving employment. Any firm, person or corporation violating any provision of this act must, on conviction, pay a fine of not less than $50 nor more than $500 or to be imprisoned not to exceed 60 days hard labor for the county.

That all laws and parts of laws in conflict with the provisions of this act be and the same are hereby repealed.

If every State in the Union would take similar action, the walking delegates would be known no more and peace and prosperity would be ours.

The question for us to decide to-day is "How are we going to grapple with all these questions that are before us?" I firmly believe that our Association can accomplish something to relieve the situation by forming section committees, as requested in my address in this city a year ago last Summer. Let these committees, representing the different lines, get together at least once a month, discuss remedies to do away with the objectionable features of their business with the understanding that the chairmen of the different committees are to meet with the Executive Committee of this Association every three months. If such a plan is formulated at this convention I am convinced that something will come out of it and that our next meeting will be full of interest.

IT WILL TAKE TIME, THOUGHT AND LABOR,

but I am sure we are willing to accept these conditions if they promise success. With this thought in view, the secretary has made a classification of the different trades. It may not be perfect, but it will, undoubtedly, be of some assistance to you. After you meet, it may be necessary to make other divisions in order to bring the different trades closer together; if so, this can be easily arranged. The main thing is to make a start and try to help ourselves. Those who think they do not need help by taking part in your deliberations should attend to show the others why they are so prosperous. I am so much interested in this matter that I feel confident if you make a beginning now that some of you may find it necessary to devote another day to the work. Saturday is a short day with the manufacturers and it could not be put to better use than to devote it to committee work.

We are standing to-day at the "Parting of the ways." One leads to anarchy, despotism, revolution and oblivion and the other leads to self-government, peace, prosperity and enlightenment. Which are we to take? It remains for us, as a nation, to decide. I do not fear the result; but we must be up and doing if we wish to save our country and our homes.

In his address Mr. Plumb preserved his reputation as a hammer man by striking several "nails on the head" and that the many strong points were well received by the manufacturers present was indicated by the hearty applause given at the close of his address.

Mr. James L. Cowles, secretary of the New York Postal Progress League, was then introduced. He addressed the meeting at considerable length on the subject of the proposed Parcels Post. He called the attention of those present to the improvement during the past two or three decades in the postal laws of the United States and the marked difference existing between the postal laws of this and foreign countries. Mr. Cowles argued that owing to special rates which he charged were being allowed by express companies to catalogue houses the proposed bill would not be of any special benefit to that class of business houses.

ROBERT GARLAND,
MEMBER OF EXECUTIVE COMMITTEE.

At the close of Mr. Cowles' remarks Mr. Kretsinger said: "Whether we agree with Mr. Cowles or not I feel that a vote of thanks is due him for his presentation of this matter." This motion was carried, and Secretary-Treasurer Mitchell read his report.

REPORT OF THE SECRETARY-TREASURER.

By F. D. Mitchell.

Mr. President and Gentlemen:

I have pleasure in reporting that during the past year our organization has made distinct progress in matters of membership, reforms in part accomplished, financial condition, publicity, and enthusiasm as manifested by increased demands upon your secretary's office, and more full and prompt responses to our requests for information for use of other members.

While business changes have necessitated a few resignations, these have been more than covered by new admissions to membership. Heavier expenses have been met by increased revenues. Contracts between our members and their customers are being more definitely framed, and more uniformly observed.

SOLICITATIONS FOR CATALOGUE CONTRIBUTIONS ARE FEWER IN NUMBER,

less aggressive in tone, and more explicit in outlining the

Digitized by Google

service to be rendered; and compared with two years ago are now practically unknown to many of our members. The deduction of cash discount after the specified time for payment has elapsed is meeting with a concerted check, and in many other matters the publicity given to the official expression of the sentiments of this organization has had a tendency to change for the better many unbusinesslike methods heretofore prevailing.

Our program indicates that this report will be followed by reports from our several committees, but I think it proper at this time to allude briefly to two important matters. There have been, and, no doubt, still are, some members who do not recognize that

A PREVAILING SENTIMENT IS OF BUT LITTLE IMPORTANCE IN THE ABSENCE OF AN OFFICIAL EXPRESSION

of such sentiment, and who are prone to view with indifference the various resolutions adopted by this organization; and to these alone, I would state that the adoption of a resolution by this Association is but a preliminary step in the matter. Immediately after the convention copies of this resolution are placed in the hands of every prominent Hardware

H. B. LUPTON,
MEMBER OF EXECUTIVE COMMITTEE.

PUBLICITY IS GIVEN TO SUCH ACTION THROUGH THE VARIOUS TRADE JOURNALS.

jobber in the United States, whether he be a member of an organized body or not.

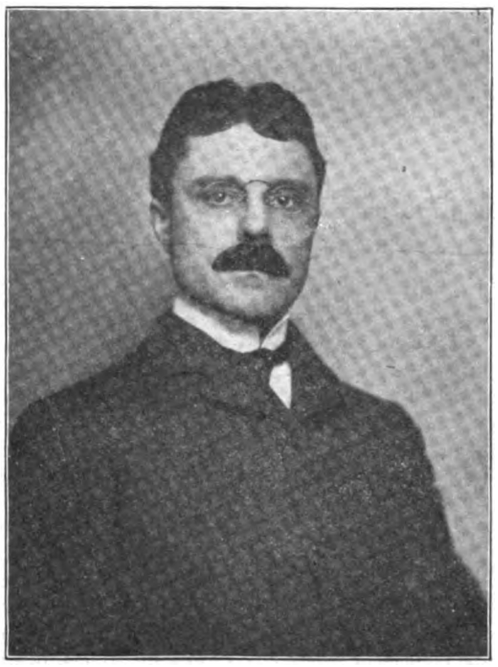
Copies are addressed to the secretaries of the various organizations in interest, and following this we receive requests from our members for some three or four thousand printed copies of the resolutions, to be by them used in connection with their correspondence in the matter, so that the parties for whose particular benefit these resolutions are framed receive definite advice of this active sentiment from perhaps a dozen different sources, in a form requiring acknowledgment, and could not, if they would, remain insensible of the existence of such sentiment.

In calling to your attention the second matter, viz., our small membership, this brief allusion should not be used as a measure of its importance. With merely nominal annual dues our organization should certainly have enrolled as members a much larger percentage of the concerns eligible. Were our membership doubled, the increased revenue

WOULD ENABLE US TO INSTALL A PERMANENT HEADQUARTERS

and enlarge the scope of our work, admitting of our giving tangible treatment in many lines not possible under our present small income. But this really can only be accomplished in one of two ways—we must either send a representative to visit the various concerns who may be eligible to membership and enlist their active interest, or we must look to those who attend these meetings and who continue their membership as a desirable quantity, to individually constitute themselves a committee of one to secure one new member. I hope that this organization will decide to employ both of these methods and that at our next meeting we shall be able to congratulate ourselves upon having at least double the number of our present membership.

This report was unanimously adopted and Messrs. Kretsinger and Birge spoke briefly but much to the point on the advisability of stronger efforts being made by all members to increase the membership of the Association.



Chairman Asbury, of the Executive Committee, then read his report:

REPORT OF EXECUTIVE COMMITTEE.

Report of the Executive Committee to the American Hardware Manufacturers' Association.

The work of your Executive Committee during the past four months or in other words since the adjournment of the last convention in Saratoga, July 17th, has been largely routine.

An investigation has been made of the existing evils in the manufacture or sale of Hardware, and a considerable

C. W. ASBURY,
CHAIRMAN OF EXECUTIVE COMMITTEE.

volume of correspondence has passed between your Committee and members of the Association, in the hope of getting a full, frank expression from them of their experiences. We have urged each of them to submit for discussion and consideration at this convention resolutions bearing upon their respective complaints. In order that these resolutions may be intelligently considered your Executive Committee recommends the appointment of a special committee to serve during this convention whose duty it shall be to receive all resolutions after the discussion of them on the floor of the convention and before final action thereon, the object being to insure a draft by the committee of all resolutions in such language as will reasonably be a composite of the views expressed by members, and further to encourage the submission of resolutions bearing upon the larger questions of interests and value to our membership.

Much consideration has been given by your Executive Committee to the subject matter of conferences with officials and committees representing other similar and allied bodies. We can but hope that our actions broadly speaking may meet with your approval.

The details of the arrangements for this convention have also demanded a considerable portion of the time of your committee. We do most cordially invite suggestions from our membership and desire to impress upon them the fact that they have in the Association and its officials a very exceptional opportunity for the protection of their interests and for the elimination of trade evils whether in the manu-

Digitized by Google

facture or the sale of their goods. The opportunity is here. The organization is here, officered and manned, willing to serve in any capacity which will be of benefit to any of the members. All we ask is that more use be made of our equipment.

In the coming year we hope for a largely increased membership. What we most need is numbers for strength. Our scope for usefulness is limited only by our resources.

Respectfully submitted,

C. W. ASBURY,
Chairman.

Following the suggestion of Mr. Asbury, President Plumb appointed Messrs. Asbury, Pratt, Pike, Gladding and Kretsinger a committee to consider resolutions.

Chairman Hays, of the Membership Committee, reported a total membership in the Association of 175.

Chairman Oliver Williams, of the Grievance Committee, reported that the only grievance reported since the last convention was from the Southern Association to the effect that some manufacturers were giving to trade papers for publication their lowest discounts. He said that this matter was under consideration, and closed by inviting all to bring to him their "cares and sorrows—troubles and woes."

The roll call was made and 115 members and representatives answered present.

Thursday.

The manufacturers met in executive session Thursday at 10 a. m., with President Plumb in the chair.

The following addresses were listened to.

WHAT ARE WE HERE FOR?

By William M. Pratt.

Mr. President and Gentlemen of the Convention:

When our genial Secretary invited me to address you upon this subject he was kind enough to inform me that the gentleman whom the Executive Committee desired to have deliver this address, was unable to do so, and would I do it? If he felt that he was making a little party call, so to speak, on account of an accommodation of a similar nature extended to him in the past and hoped he would not find me at home, he was very much mistaken; I fairly jumped for the bait, the subject which he had selected just suited me, I thought that I knew exactly how to handle it, I felt as the Whale said to Jonah that it was "a good opening for a young man."

"What are we here for" is a good deal like Dave Harum's low bridge, we have all seen it. I remember having it pretty thoroughly impressed upon me when I first entered a commercial office and was told in plain English what I was there for; it was impressed so thoroughly that the impression has always remained and I have found from time to time when it has been necessary for me to break in young men who have had no previous experience in commercial life that to show it to them was not out of order. I therefore felt that it would be a pretty easy matter for me to take a few minutes of your time in explaining what I consider were

THE NECESSARY PERQUISITES TO THE SUCCESSFUL WORKING OF THIS ORGANIZATION,

what it should stand for and what it should not stand for, how it should court strength and avoid weakness, and how we could get the most out of our various gatherings.

Upon deliberation however I found it was an entirely different proposition from what I had imagined; we can neither invoke military discipline nor martial law, the services and attendance of our members must of necessity be entirely voluntary, it is not practical even to draw an idealistic line and endeavor by persuasion to induce every member to toe it; and the more I attempted to get something that could be presentable and not bore you instead of being reminded of the Whale's remark to Jonah, I was rather more deeply impressed with Jonah's reply, that he felt "rather down in the mouth."

Before I had my ideas more than worked to a boiling point my most esteemed friend in the Editorial Department of the *Iron Age* comes along with an article that digests the whole subject, sort of pours off the heat, delivers the good iron and about all I find left is slag, and I feel that perhaps I could do better justice to the members of this Association by reading that editorial rather than by trying to improve upon it.

ASSOCIATION AND ORGANIZATION SEEM TO HAVE BECOME A PRESENT DAY NECESSITY,

by them, and because of their being, it is possible to draw together men and minds of vast and varied experience, make our Association prismatic and the concentrated brain power can be directed by our officials and made to stand as a menace to all evil practices and the champion of whatever is just and right. Let us stand for progress and against retrogression; by getting together and interchanging ideas we shall be able to see things as they *are*, to cope with conditions that *exist* while the fantasies of our own imagination shall take their proper form and flit away; a single individual is like an old time flail while a well directed organization is like a modern steam thrashing machine. The folly of attempting to flail out 1,000 acres of wheat is too apparent to need discussion, it is equally presumtuous for an individual to attempt to correct trade abuses *single handed* or to endeavor to

WILLIAM M. PRATT.

cope with modern trade conditions with meagre knowledge acquired only through the narrow windows of his own individuality.

THE WELL WORN RUTS OF THE PAST MUST BE ABANDONED;

and as a municipality aroused by public sentiment finds it necessary to replace thir rutty roads with asphalt pavements, so must our merchants and manufacturers who desire to keep abreast of the times displace antiquated methods and adopt those suited to prevalent conditions if they expect to attempt even to keep their place in the march of progress.

Self interest, the strongest of all motives, has impelled us to organize because we believe organization to be beneficial. So far so good. We have also elected from our members a most efficient corps of officers and they have performed their duties faithfully and well, we have had several meetings with considerable success and fair attendance, and let us consider the past well done.

I am reminded right here of a little story of a consulting physician, whose acquaintance I once enjoyed, and I was deeply impressed with his manner of handling what were apparently often times delicate matters. After having diagnosed the case to his satisfaction he would go into the family and say, "I think everything that your family physician has done up to now has been right but from now on I would suggest trying something else." Without disturbing the past

Digitized by Google

he was alive to the present and believed the future should be handled along different lines.

Now I think that this pretty nearly hits our case,

WE HAVE DONE WELL ENOUGH UP TO THE PRESENT POINT,

but from now on I think we had better do a little different; neither our organization nor our officers can make this Association what is should be unless they can have the *active* co-operation and assistance of a great majority of the members as well. We must both give and take, those of us who "know it all" must be willing to take a little from the other fellow, while our quiet friends must surrender the right to hoard their ideas like uncut gems, they must bring them out from their hiding places that they may reflect their brilliancy for the general good. When we receive a notification of a forth-coming convention, with the notation that for further particulars we can see the program enclosed; if it occurs to us as members that with the President's address and the reports of the officers, and the various papers to be read, our responsibility ceases, and we have nothing more to do but let things taken their own course; we must *dispel* that illusion.

There is a good deal of truth in the old adage that we find about what we are looking for, if we come to our conventions looking for knowledge and ideas, we shall find both; if we come here simply to have a good time and say, "Hello! Bill," we shall find that also. But each and every one of us is vitally interested in the success of this organization, it can accomplish for every individual member what it would be impossible for an individual member to accomplish for himself.

IT CAN ACT AS A BUREAU OF EDUCATION INCIDENTAL TO OUR BUSINESS,

and these bureaus of education occupy much more than an incidental position.

What merchant, manufacturer or financier one hundred years ago would have thought of installing in his business an analysis department which would give him an insight into the detail of his affairs far beyond what general results would ever tell. That would tell him what articles were profitable as well as what customers, that would tell him not only what he was supposed to make upon each article but what he actually did make; not only what percentage of general expense should be added to his factory costs but just what proportion of this expense each article or class of articles should bear; that would tell him what machines should be added and what thrown out, and whether a State, county or town showed the annual net profit that it should. A bureau of education has at its command a concentrated brain power which is one of the greatest curative agents when applied to commercial disease.

The time has gone by when our competitors are to be looked upon as devils and be fought with fire, they belong to the same family that we do; they are as alive to their own best interests, as we are to ours, and they are not in business for their health.

THE CUTTING AND SLASHING AND KNIFING WHICH HAS BEEN SO PREVALENT

in the past cannot be continued if prosperity is to remain permanent; a personal contact, a personal acquaintance with those engaged in a competitive business, or engaged in a business like or similar to our own, will do much to eliminate hard feeling and ill-advised action and broaden our knowledge of men and affairs, and thereby equip us with the necessary wisdom wherewith to direct our own individual organizations.

It is a matter of considerable gratification for us to take note of the strength of our organization, it is composed of all or nearly all of the representative Hardware manufacturers of this country; it is equally gratifying to note that our members are represented by principals rather than subordinates.

WE HAVE LAID OUR FOUNDATION AND LAID IT WELL,

let us go ahead and build upon it a structure which shall be a credit to itself and an honor to all its members; it will only be possible to do this by treating it as a business proposition and handling it in a business way.

We do not desire to eliminate the entertainment features but they must not be made paramount, "A place for everything and everything in its place," it is just as necessary to the success of our organization that our convention be made popular and hospitable as it is dangerous to allow the entertainment features to overshadow the real work which the Association ought to and can perform.

We are very fortunate in being able to meet at the same time and place with our jobbing friends, whether or no it would be advisable to hold separate meetings occasionally is a matter open to discussion and one which will admit of argument both for and against, but a joint meeting and a joint convention is not without its dangers as well as its advantages. It is useless for us to come here and put on a false mask, spend our time in flattery and when we return home do things with an entirely different face; there is no use of our telling our jobbing friends one thing if we mean something else, they will think more of us and more of our organization if we tell them what we mean and stand up to it.

If we have any grievance, state it, don't put on a cloak around it and cover it up with something else; this Association cannot make for itself an enviable reputation if its members are going to come here and declare unanimously in favor of declining to allow cash discounts unless payments are made within ten days from date of invoice, and then allow their customers to settle even after the bill is due and deduct the discount, to which they make no comment.

N. A. GLADDING,
MEMBER OF EXECUTIVE COMMITTEE.

There is no use of our coming here and claiming that we will not allow contracts to be broken, then accept contracts for a large quantity of goods and allow our customers to take what they require and drop the balance; we might much better say what we think and do what we say we will do.

A MAN THAT IS FULL OF CARE IS USUALLY CAREFUL,

I believe that if this Association has cares enough it will be careful to merit the success by good right expected of it; there is one care that I can only express by quoting from the *Iron Age* of Oct. 15th last:

> "Care must be taken that the manufacturer's gathering does not become a mere adjunct to that of the jobbers and have as its main object to curry their favor. The part taken by the manufacturers' association in providing entertainment for the jobbers is, if delicately done and not carried too far, a very pleasant feature, although there are those con-

Digitized by Google

nected with the jobbers' association who are disposed to consider it a little undignified to accept too many attentions of this character. The matter of entertainment, too, if overdone is apt to intrude too much on the time of the associations, whose sessions are liable to be interfered with by the counter and sometimes the superior, attractions, of too abundant hospitality. The manufacturers and their representatives, while standing in most cordial relations with the jobbers, should be careful to maintain a dignified attitude and refrain from any course of action or manner of expression which might suggest the graceless suspicion that their guests were the recipients of attention merely as present or prospective customers. There has sometimes been a disposition in the open sessions to indulge in exceedingly courteous, though meaningless, generalities when the relations between jobbers and manufacturers have been under consideration. It would be much better and more worthy of the dignified parties concerned if there were in the joint meetings frank and candid statements on the part of the manufacturers, even though such statements might sometimes run counter to the views and interests of some of the merchants addressed. The manufacturers' association is a sufficiently large and important body to make its own business its prime concern. If it neglects its opportunities and is content to regard itself as a tender to the jobbers' association—a course which the jobbers themselves would be prompt to condemn—it will fail first to merit and soon to receive the support of manufacturers who deem that a business organization should be conducted on business principles."

While it might be in better taste to take cognizance of the boy's request of his parson, "Say Amen, and sit down," after making this quotation, I believe that supplements to second editions are quite in order and the question at once arises in my mind whether or not this Association has any right as a whole to go very far into specific detail, what may be wise for one of us may not naturally be wise for the other fellow—even

AS HARDWARE MANUFACTURERS WE COVER A PRETTY BROAD FIELD

—what would be good policy and good business for one might prove exactly the contrary for somebody else, and as an organization bent on the general good we should avoid all class legislation. General subjects can be discussed *ad libitum* specific detail should be handled with care, we can hardly expect an individual member to take a stand that he knows is against his own best interests. Let us bear in mind the old adage that in unity there is strength.

In closing I can only say that we are here as manufacturers, as members of our Association to attend the business sessions of our convention and lend a willing hand toward the discussion of such topics as are of mutual interest, each and every one of us from his standpoint, great or small, in order that from the broad knowledge thereby gleaned the Association can stand for those principles and adopt those policies which shall do injury to none, do good to all; and which shall enable this organization to stand as a beacon light, disseminating its rays throughout the whole Hardware world, taking an active interest in all the happenings in that world from the cradle to the grave—from the manufacturer to the consumer—

CHAMPIONING THE CAUSE OF RIGHT AND JUSTICE WHEREVER FOUND,

heralding the march of progress; an organization which shall be handed down as a legacy worth more than gold to those who are to come after us, and by it and because of it make possible for them a greater ratio of improvement. It is not necessary that we should go into specific detail as to how each and every one should run his business, it is not necessary that we should insist as members of this Association that we are to be bound by certain specific rules and regulations; we do not come here to foster monopoly, to breed distrust, to create internal strife or idle away the hours which should be devoted to business affairs, we come here to take up matters of vital interest to manufacturers of Hardware and thrash them to the core, and from the incipient kindling that shall be lighted by the various speakers we shall start a fire of discussion that shall blaze with the ideas that have been too long hidden under a bushel and after the fire has spent itself we shall find in the cold ashes that are left something more priceless than radium to guide us over many a dark and hidden way.

TRANSPORTATION.

By Hon. D. H. Goodell.

The question of transportation affects the material interests of everybody. It is of such vast importance that I enter upon its consideration with great diffidence. The consolidation of railroads has been of immense value in the rapid development of this country. I believe in railroad consolidation.

I HAVE NO FEAR OF LARGE CORPORATIONS, OR TRUSTS.

So long as that greatest of trusts, which has taken over and consolidated 46 States into one grand government, is presided over by a man whom we all regard as honest, whatever we think of his views and conduct, there need be no fear. I believe we have had an honest man as President of the United States so long as I can remember, and I expect we shall have in the future. While honesty sits at the helm there is very little danger.

HON. D. H. GOODELL.

Times and opinions change. When I was a boy my grandfather was greatly alarmed lest the great Nashua Mfg. Corporation, with a capital of perhaps a million dollars, would soon control the State of New Hampshire, to the ruin of the farmers and small capitalists. Soon after, the Amoskeag Mfg. Corporation of Manchester was organized, and occupied for a quarter of a century the unique position of being the largest manufacturing corporation in the world, and yet New Hampshire still lives and enjoys greater prosperity than ever before. The Boston and Lowell Railroad, running from Boston to Lowell, a distance of twenty-five miles, was one of the first railroads ever built in this country. A little later, the Lowell and Nashua Railroad, running from Lowell to Nashua, a distance of fifteen miles, was built, and these two roads were run for many years by two corporations. Later, the Concord Railroad was built, running from Nashua to Concord, a distance of thirty-five miles, which was run independently until a very few years ago,

Digitized by Google

THE QUESTION OF CONSOLIDATION OF RAILROADS

in New Hampshire began to be agitated some twenty years ago. Our people were almost unanimous in opposition. The advantages to be derived were nothing in the minds of most of our people as compared with the imminent danger of corporate greed. At last, consolidation began in a small way. It increased and increased in almost geometrical ratio until at last the Boston & Maine R.R. controls every rod of steam railroad in our State except a very little at the extreme North. This system also controls many miles of road outside of the State. And what is the result? We formerly paid from 2½ to 5 cents per mile for a passenger ticket. Now, we buy a mileage ticket and travel over the whole system, trunk lines and branches, for 2 cents per mile. Our freight rates have been largely reduced. Arrangements have been made whereby we ship freight from almost every depot in the State to Western and Southern points, or, at least, to many of them, at the same price as if we shipped from New York City. Everybody is satisfied, and nobody would return to the old plan.

The consolidation of great trunk continental lines has been constantly increasing. Distant sections of the country are brought close together. Time of transportation of both passengers and freights has been reduced, and prices are reasonable. The growth of the country in all sections has been wonderfully promoted. Probably few realize how much the transportation companies are doing for the unbuilding of the numerous manufacturing and agricultural interests of the country.

But is everything all right? By no means.

WANTS SUPPLIED CREATE NEW DEMANDS.

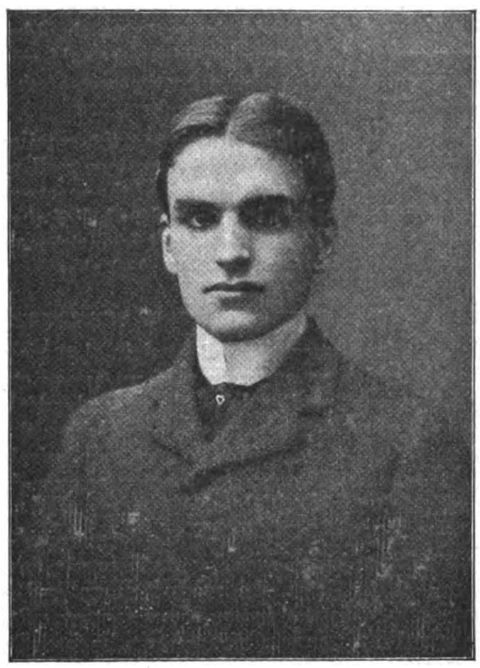
If it takes seven days to transport merchandise from a given point to Chicago, while it took fourteen days to do it twenty years ago, we ought to be satisfied. If, however, a certain line promises to transport our goods in seven days, and the goods are seven weeks on the way, we must pay the freight just the same, and, if the freight is prepaid, the railroads have the money and the goods, too. I make some seasonable articles, like cherry stoners. The time for selling them by the jobber lasts about four weeks. We cannot get orders until the crops are assured. We ship promptly, but, for some unaccountable reason, the purhaser does not receive them. He telegraphs for them; we send tracer, or suppose we do, for we demand that it shall be done. The goods are not found until the cherry crop has been disposed of. The jobber declines to receive them, for he knows he cannot sell them for a year at least, and, as the crop has been large, he thinks there will not be a crop in his vicinity for two years. In disgust with the whole business, he writes us to know what shall be done. The only thing we can do is to pay the freight, order the machines home, and pay the freight, and keep them until the next year. The railroads have received pay for freights both ways instead of one, the jobber has lost his profit, and

WE LOSE BOTH PROFIT AND FREIGHTS.

This is not an uncommon occurrence. We ship our goods to many different points, and we are constantly receiving letters from customers asking us to send tracer after goods shipped to them. If this was something new, we might say this slow delivery is owing to the enormous amount of freight which has been handled for the past few years. It is no new thing. If the railroads are short of rolling stock, as they say some times, why don't they bring along the freight and let their cars be unloaded so as to be ready for use again? I do not object to the rule that freight cars must be unloaded in four days after arrival or pay extra charges. I do object to setting my freight out on a side track, within fifty miles of my place, and letting it remain for days and weeks with no chance for redress on my part. Within eight months we have had a carload of steel

THIRTY DAYS ON THE ROAD FROM PITTSBURG

to our place, greatly to the injury of our company and loss to our employees.



What can be done? This is too great a question for me to answer. State legislation is entirely inadequate to meet this issue. If legislation is needed, it must be done by United States Congress.

I have thrown out these suggestions in the hope that the tremendous influence of this body, together with our combined experience and intelligence, will in some way be able to devise some plan to correct these evils. As a rule, "Where there is a will, there is a way" in all human endeavor. If the railroads and transportation companies are compelled by law to deliver freight with reasonable promptness, except on account of accidents, floods, or other disaster, the managers will doubtless find some way to comply with the law.

PACKING OF SMALL ORDERS FOR DIRECT SHIPMENT. SHOULD AN EXTRA CHARGE BE MADE?

By Edwin A. Walton.

When I first learned the subject assigned to me I thought my paper could be written easily and the answer made in the three words of a famous biscuit, "Of course! Certainly!" But I knew you would want it expanded out into more than

EDWIN A. WALTON.

three words and so went to work to interview some of the manufacturers and jobbers of my native city.

FROM THE MANUFACTURER'S STANDPOINT.

I approach the expansion of the paper first and foremost from the manufacturer's standpoint, assuming quite naturally that we are manufacturers who thoroughly recognize and protect the jobber and depend mainly on him for the distribution of our wares. I say mainly, because, if the manufacturer holds consistently to a line of prices to the retailer which are enough above the prices to the jobber to afford the latter a reasonable margin, he will find that his trade will be *mainly* with the jobber, even though he has gone energetically after the retail trade direct in order to introduce his wares and create a demand. We all agree, I think, that the business of the jobber is to gather together several thousand different articles and have them ready for prompt shipment to the retailers in his territory—that the faithful carrying on of this work of gathering and distributing is what makes him of the greatest value to both retailer and manufacturer. This implies the carrying of a stock of the various Hardwares, for otherwise the jobbing house would become merely an office, sending out salesmen and carrying accounts, all orders being sent to the various factories for direct shipment.

Digitized by Google

THIS PAPER CONCERNS ITSELF ONLY WITH SMALL SHIPMENTS.

In some lines, for example refrigerators, and in many other lines where the quantities that the retailers' order are large, it is often best for the jobber to order direct shipments to his customers, but this paper concerns itself only with small shipments or with shipments consisting of small and irregular quantities of articles.

Most of us manufacturers experience keen competition, and must bring our costs down to the minimum to realize any profit on our sales. We can best do this by running through large lots of each article and each size and by placing the goods in our warehouses ready for shipment as orders come in. We stock them in packages holding regular quantities, the quantities being those required by the average jobber and small enough to allow him to re-ship ordinarily to the retailer without breaking package. We make our packing cases in large quantities to secure low cost and each case is designed to exactly hold the quantity of goods printed on the outside. We carefully figure our costs and establish our prices on this basis and it goes without saying that any change from this plan entails us extra cost in both packages and labor of packing.

This being the case, the answer is clear that where we are asked to depart from this rule and carry open stock to be packed in odd quantities in odd size cases, we should make an extra charge to at least cover the extra cost. If we do not, the extra cost must be averaged into the cost of the article or else come off from our normal profit.

If we are selling the odd quantities to the retailer direct at an advance over the jobbing price, we can well afford to stand the extra cost of packing because of the increased profit on the sale and I will state it as my firm belief that if the jobber asks us to do this packing of odd quantities at no advance in price, we manufacturers will find that

IT WILL PAY US BETTER TO PASS BY THE JOBBER

and go directly for the retail trade and in that way secure the extra price which we must have if we are to stand the extra cost. We have read and heard much about the passing of the jobber and I want to say to the jobber that if he is ever to pass from the position he now so admirably fills, it will be due to an insistance on the manufacturer doing all the work and giving him all the profit.

I find this is well understood by the largest jobbers and that many prefer to make even *large* shipments from their stock rather than to draw the manufacturer and retailer closer together by a direct shipment from factory. Such jobbers tell me that they want an extra charge by manufacturers for odd quantities and that the larger the extra charge the better, as it protects them from the so-called jobber who only combines his retail order with those of his neighbor in nearby towns in order to secure jobbing prices.

It is one thing to say a thing should be done and often quite another thing to do it. In every line there seems to be

MANUFACTURERS WHO DO NOT KNOW THEIR COSTS

but only estimate them and on such estimates make prices which bring no profit and even cause a loss. Often the ruinously low prices are made on one line whereas other lines made at the same factory bear a large profit which covers the loss on the cut price line, and the fact of loss is never discovered unless a complete cost system be installed.

I am glad that the Hardware journals of the country are devoting so much space to the subject of factory costs. It would be to the interest of all concerned if all factories were required to know absolutely their costs and if this could be made the case there would be but one answer made to my questions, "Should an extra charge be made?" and that answer would be—"It *should* be and it *shall* be."

Mr. Plumb then appointed the Nominating Committee as follows:

William H. Hayes, chairman; Edward Ingalls, George H. Bishop, H. B. Plumb, Oliver Williams, Albert W. Barnett, W. T. Norton, T. B. Coles, George M. Landers, and the session adjourned.

Afternoon Session, Nov. 19.

The meeting was called to order by President Plumb of the Manufacturers' Association. President Kirk of the National Hardware Association also occupied a seat at the table.

In opening the meeting President Plumb said:

I consider it an honor to be called upon this afternoon to preside at this meeting, representing as it does the leading merchants, manufacturers and producers of Hardware in the United States. We are to be congratulated upon selecting this place for our meeting, not only because of the conveniences offered us, but because of the delightful climate and the health-giving air, strengthening us in our work and helping us to make this the most successful meeting that has ever been held either by the manufacturers or the merchants.

T. James Fernley of the National Hardware Association was requested to read an address by W. S. Wright of Omaha, Neb., in his absence, on the subject "Should Hardware Manufacturers Sell to Other Than Legitimate Hardware Jobbers?"

SHOULD HARDWARE MANUFACTURERS SELL TO OTHERS THAN LEGITIMATE HARDWARE DEALERS?

By W. S. Wright.

The question should Hardware manufacturers sell to other than legitimate Hardware jobbers can be answered in Yankee

W. S. WRIGHT.

fashion by asking is it profitable or desirable for Hardware manufacturers to encourage and develop illegitimate and unfair competition, and discuss the question from that standpoint. Unfair competition may be termed outside goods in the hands of a regular dealer in some other standard line. For example, ice cream in a butcher shop; patent medicines in a baker shop; tobacco and spices in a Hardware store; Hardware in a grocery store, etc. These foreign lines may be put in to gratify a personal grudge against the legitimate dealer or to attract attention to a regular line on which a fair margin is made by depressing the quality, the value or both of an outside line in which the seller is not interested save as it may serve to stimulate the sale of other goods. The items are sold not as a business but as an advertisement. The purchaser without intimate knowledge as to the character, quality or value of the goods is given a false impression of the quality or value of both. If he buys at a butcher shop a quart of ice cream for 20 cents that is represented to be just as good as that sold by the confectioner over the way at 50 cents he may if he desires buy the next quart of the confectioner and test for himself as to where the facts lie. But if he buys a tool from a grocery clerk at 20 cents that is represented as the identical tool that the Hardware dealer sells for 50 cents, the chances are that he will hold a different opinion of the manufacturer and the dealer than he would had he bought the tool he wanted from the Hardware dealer

Digitized by Google

and paid a fair price for it. He has been imposed upon, his confidence betrayed, his suspicions roused and developed;

THE MANUFACTURER AND THE LEGITIMATE HARDWARE DEALER ARE ALIKE CONDEMNED

because of unfair competition.

The question should Hardware manufacturers sell to other than legitimate jobbers is one that appeals to and is of direct interest to four classes, the manufacturer, the jobber, the retailer and the consumer. The interests of all are so closely interwoven as to make it a difficult proposition to separate them.

I understand that this discussion is not a question as to whether the manufacturer shall sell the legitimate retail Hardware dealer or not, that question having been discussed heretofore, but a question as to whether his interests will be served by placing his goods in the hands of outside dealers so that in this way through other and indirect sources they will come in direct competition with the legitimate jobbers and retailers of Hardware.

In a trade paper not long ago I was impressed with an illustration that compared the Hardware business to a tree, with the manufacturers as the branches, the trunk the jobbers, the roots the retailers and the soil the consumers. To secure the very best results every part of the tree must be properly cared for and not be impeded in its opportunity for advancement. It is a poor gardener who will graft a good tree with an inferior one in the hope of improving the quality of the fruit or who ignoring the proper and legitimate roots and the necessity of their securing sustenance from the soil in order to sustain the trunk and the branches will, without detaching the branch from the tree start it in the ground hoping that by drawing sustenance from both ends it may outgrow the tree.

There are manufacturers possibly known to many of us but haply not members of the American Hardware Manufacturers' Association

WHO HAVE MATERIALLY DEVELOPED TRADE POSSIBILITIES

by selling the Hardware jobber first, then the grocer, the retail Hardware dealer and the retail grocer and the only reason they have failed to sell the consumer is because it was not possible to reach them. Temporarily this policy is a trade developer but the permanent results are not of a nature to commend it to favorable consideration.

As a plain business proposition from the standpoint of a manufacturer the only question is to distribute his product to the consumer in the most economical and the most effective way.

THE REGULAR HARDWARE DEALER STUDIES THE MERITS AND ADVANTAGES OF AN ARTICLE

and is in position to present it more intelligently and effectively and in a more attractive way to a possible customer. He is or should be familiar with the conditions under which the article is to be used, he knows what it is intended for and he can offer such suggestions and instructions to a customer as will tend to enable the use of the article to be made effective, satisfactory and to reflect credit and draw commendation both to himself and to the manufacturer.

On the other hand let the same article be placed in the hands of a purchaser by a grocery clerk who knows nothing whatever in regard to the use of the article in question or let it be handed out by a cheap girl in a department store and if there is any possibility of the article in question being used in a way to reflect credit on the manufacturer it is due to the intelligence of the purchaser and not to any knowledge on the part of the people through whom the goods are marketed.

There are undoubtedly many lines of goods in which the distribution may be largely increased by reduced prices but this probably applies in a lesser degree to Hardware than to any other line. A party may be deterred from building a house on account of high prices but he will not build because trimmings are cheap. He will not buy any kind of a tool that he already has because the price offered is below the market and on this account it would seem as though

A CONSERVATIVE METHOD OF MARKETING THE LINES OF GOODS

we represent would commend itself alike to the manufacturer, the jobber and the retailer and would be an advantage rather than a detriment to the consumer.

There are different classes of competition and were the competition referred to fair, legitimate and disposed to distribute these goods at a fair margin of profit, no reasonable protest could be made, but unfortunately this is not the case. Hammers and hatchets are used to stimulate the sale of prunes and dried apples while saws, shovels and spades are utilized to increase the prestige and popularity of some particular brand of tea or coffee. Goods that cost the jobber $6.25 per gross are sold by the outside jobber at 50 cents per dozen and retailed in competition with the country Hardware dealer at 5 cents each, as a so-called advertisement or to develop other lines of trade. This may help other dealers but it is particularly severe on the legitimate Hardware trade who are entitled to a fair margin of profit.

It was reported some time ago that a doctor who advertised largely boasted of the fact that he never had had brought to him a case of cancer that he failed to cure and investigation of the matter developed the fact that the statement was correct and that while he did invariably cure the cancer he never failed to kill the patient.

COMPETITION OF THIS KIND IS DETRIMENTAL TO THE CONSUMER

in that it tends to place in his hands goods that are not what they are represented to be and in this way creates distrust and dissatisfaction in regard to articles of merit and standard reputation.

We all appreciate the fact that a salesman whether he represent manufacturer, jobber or retailer without a sufficient knowledge of the goods he undertakes to sell has only one talking point and that is price, and when we any of us have a representative undertaking to sell our goods whose only claim to consideration is price, we need and are entitled to sympathy. In this connection there are many articles unnecessary to name but which all of you can name for yourselves once known as standard in merit and reputation but on account of the excessive competition they have been reduced in price, reduced in quality until they are now rejected by the consumer generally and while once a standard in the Hardware line are now entirely ignored by them or sold only in a small way and rated as undesirable by grocery stores, racket stores and ten and five-cent counters.

The tendency and disposition on the part of the manufacturer to enlarge the market is not always profitable especially when that market has been built up, developed and made successful along legitimate lines. An excess of competition may for a time increase the distribution but the ultimate result will be the death of the business.

THERE IS AN OLD SAYING AND A TRUE ONE,

that goods well displayed are half sold. Put some diamonds in a dirty wooden bowl and set them in the fly specked window of any shop and they would attract little or no attention or desire on the part of any one to own them, but the same goods properly displayed behind the polished plate glass window of a jeweler's store would attract attention and create in the minds of the passer-by a desire to own them.

Along the same lines the regular Hardware dealer is in position to and does make a better display of his goods than does the grocery or department store, for in either of these where a Hardware department is maintained it will usually be found in the basement, in the back of the store or in some dark corner where the goods cannot be displayed to the best advantage.

Every manufacturer is interested not only in the largest distribution of his goods but in having them displayed and disposed of so as to develop and increase the demand by the satisfaction that they give and certainly no other class of trade is in the same position to do this to advantage as is the regular Hardware dealer. It should be, therefore, to

THE INTEREST OF THE MANUFACTURER SO FAR AS LIES IN HIS POWER TO FOSTER AND SUPPORT THE LEGITIMATE JOBBER

and retailer of Hardware.

First, because this action on the part of the manufacturer serves to secure what has always been advocated by the National Hardware Association; namely, a higher standard of business methods and is a protection to the jobber in securing and maintaining a fair margin of profit on his business.

Digitized by Google

Second, because it fosters and protects the interests of the legitimate Hardware dealer whose interests are identical with those of the jobber and manufacturer and whose business and profits if demoralized must of necessity react on both jobber and manufacturer.

Third, because the interests of the consumer are best served by placing in his hands on a fair basis the class of goods he desires and are best suited to his purpose in a way as to secure to him the best results from their use.

IT IS AN EASY PROPOSITION TO TEAR DOWN

but a more difficult one to build up and we believe that the interests of all parties concerned will be best served by such methods as have been successfully used and approved for many years and we appeal with confidence in our cause and our methods to the established and farsighted manufacturers to use their influence and effort to prevent a demoralization that in the very nature of things must of necessity react on them as well as other parties with whom they are interested both directly and indirectly in securing the largest, the most satisfactory, and consequently most profitable distribution of their various lines.

In addition to the practical side of this question there is another which is worth taking into consideration. We are all interested to the largest degree in the development of good citizens and as many of them as possible. It is an unquestioned fact that the man who by industry and thrift acquires a modest competence is of more advantage to the community, the State and the nation than a number of Wall Street speculators or board of trade operators. One class adds to the real wealth of the country and promotes its best interests and develops its strength and resources. Those of you who do not know by experience what the other class do can find out by asking their friends.

Abraham Lincoln said that God must have loved the common people or he would not have made so many of them. The retail Hardware dealer like many of us is of the common people whom God loves and therefore chastens. Many of us can have our experts and specialists for many lines of work but the retailer must be an all-around man. He must be a good buyer, salesman, collector, financier, credit man, manager and mixer. If he lack in any of these qualifications he is a failure. If he have them all, what? By years of patient toil and thrift and strict attention to business, early and late he may accumulate a modest competence, but in return for the time, the labor and effort expended, the reward is miserably small and not to be compared with that of the farmer, mechanic or even the laborer if he be comparatively as industrious and thrifty. Compelled by his pride and duty as a citizen to contribute of his time and means to the development of the locality in which he resides

HE IS ENTITLED TO ALL THE CONSIDERATION AND PROTECTION THAT HE CAN RECEIVE

at your hands and it seems an unfair proposition that in addition to being burdened with the competition of the local peddler the department stores and catalogue houses he should find in his own locality four or five grocery stores and a couple of butcher shops in active competition with him for a business that he has built up and to which he is legitimately entitled. Protect him, gentlemen, he needs it, he is entitled to it. Not as a charitable proposition but as a business one. You need him in your business and he will assist in its development and prosperity as in the past. May his shadow, his substance and his numbers increase and may the manufacturers see their interest and their duty to foster and protect the legitimate dealer by eliminating from the Hardware trade as far as possible the evils of unfair competition and one of the best methods is to confine their sales to legitimate Hardware jobbers.

Mr. Webster R. Walkley then delivered the following address which was received with the closest attention and frequent applause:

JOBBERS' ASSOCIATION AS VIEWED FROM AN OUTSIDE STANDPOINT.

By W. R. Walkley.

Mr. President and gentlemen:

You know that I lack the inspiration of yesterday morning when so many ladies were present and you further know that the address which I prepared for yesterday is hardly suitable for today. Yet I am pleased to meet so many of you and bear you the heartiest congratulations.

As we have just passed through that delightful season which we denominate the Indian Summer, wherein the days have been mellow, lightened and brightened with the warm Autumn sun, and wherein the nights have been gloriously beautiful as the full orbed moon and stars from their golden throne, have breathed sweet peace over the world so we come from a period of unwanted activity wherein the hand of labor has been busy in the field, in the shop and in the mill, and every department of human enterprise and ingenuity has echoed the shrill whistle of progress and the hammer strokes on the anvil of determined success.

THE SUN OF PROSPERITY

has shone athwart all our land. The orchards have yielded lucious fruit, the earth abundant harvests, the mines untold wealth of iron, silver and gold. It has been an era of peace and peaceful pursuits. All the avenues of commerce on the land and on the seas have been crowded with cars and ships laden with the world's traffic. The history of these passing years seems almost a fabulous tale. Bubbles of hope have been inflated till they appeared like mammoth baloons; their covering of silk or canvass has been painted in rainbow colors, and alas how sore have been the disapointments as the gas escaped and the air ship collapsed. It has been

AN ERA OF TRUSTS OF PRODIGIOUS ENTERPRISE,

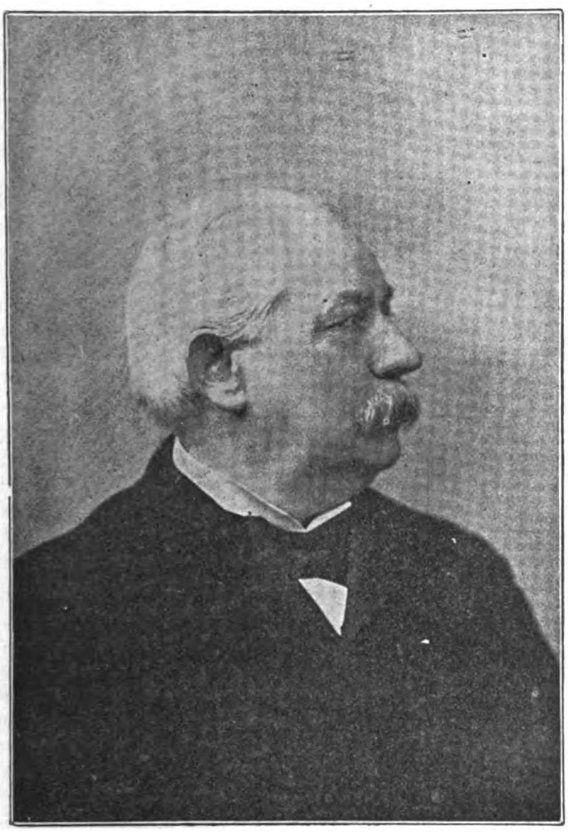
of schemes and schemers wearing the livery of light yet as dark as the blackest night. An era of thought and discovery, of investigation and criticism, of sowing and reaping. Out from these years of battles and doubt, out from the experiences which have tried mens' souls, out from the gilded promises which tempted and allured, out from possibilities which dazzled and dizzied we have gathered to-day to take up the threads of your legitimate business and discuss questions bare as the rock of Olympus.

A theme has been assigned me. I have no choice. I come as your guest, and I am asked plainly to say to you what I may, or do think of you. Is it not too early in the session to answer that question? Shall I have the same opinion of you to-morrow as I have to-day? When the roar of the ocean has filled your ears, and the eloquence of these orators has inspired your souls, and the waters of the Rudolf have quenched your thirst will one's judgment be the same as to-day? But as I understand my theme, you ask me to say what I think of you to-day, and not what I shall think of you to-morrow. If after the manner of the preacher I should choose a text, may I not with propriety select one like this: "And the eye cannot say to the hand, I have no need of thee. Or again, the hand to the feet, I have no need of you."

As manufacturers we are part of the same body, as dependent upon the jobbers to bring to a successful issue our plans; to obtain certain results, that may crown

THE THOUGHT AND EXPERIENCE BORN OF INGENUITY AND SUCCESS,

as the will is upon the brain or feet to accomplish its desires. The thought of the mind, involving the brain, must have power and means of execution. Hence, when parts of the same body are represented here, supplementing and aiding each other, both are necessary to a complete and healthy organization. This is a self evident truth. Perhaps how best one part may assist the other may be the proper theme for discussion. Each of the classes denominated in the theme is well defined and undrestood, yet sometimes an attempt is made by one to absorb or include the other—manufacturers become jobbers; jobbers attempt to become manufacturers, and I am told that some firms represented here belong to both of these associations. Oil and water will not mix. It is an unwritten law in chemistry that when one element is add-



Digitized by Google

ed to another, explosion results, hence I do not think the business interests of trade are best served by this co-mingling, yet I do not fail to recognize the tendency of the hour. I may say, of those houses who conduct a strictly jobbing business, attempting to sell only to the legitimate jobbers goods of their product, that they should expect an allegiance on the part of the jobbers to help introduce articles new in design or construction.

If I speak plainly to you, gentlemen—you understand there are two causes open for me, first, I can compliment you, as I can justly; secondly, if I speak my mind I must speak it fairly though you differ from me. I say then,

AS MANUFACTURERS, WHAT HAVE WE TO EXPECT FROM THE JOBBERS?

There are certain manufacturers whose trade almost exclusively is with the jobbing trade. In former years when any article was introduced, we said to the jobber, "We have made a new washing machine," and the jobber said at once, "Send us so many, if we find them salable we will do all we can to introduce them," hence the manufacturer came into direct contact with the jobber, who distributed his goods among the retailers and everything was quite satisfactory. Now what

HON. W. R. WALKLEY.

is the result? A leading manufacturer may go to his jobber to introduce a new article and he says, "I have so many of that kind, or similar kinds that I cannot take hold of it; when you create a demand for it I will be glad to purchase it from you." You jobbers who are discussing the question of selling to retailers must remember that if you wish the manufacturer to keep away from the retailers you must do all you can to introduce goods and as far as you can obtain the prices which he may designate at which these goods must be sold. Yet I know when you have purchased goods you have a right to dispose of them as you please; but for harmony of action between jobbers and manufacturers, who absolutely control certain products, I think it is fair for the manufacturer to expect the jobber to say to the manufacturer, "I am glad to see this article; I don't know its value; I don't know whether it will take or not in the trade," but at least the jobber should be willing to try and distribute that article by his salesmen. Then the manufacturer did not go to the retailer, he need not canvass up and down the States, but your salesmen will take the article; you will give a fixed price at a profit. The manufacturer is quite well satisfied. But if on the other hand, you say to him, to go and create a demand, there is nothing left for him to do but to go directly to the retailer. This can be largely stopped by this course of action.

I think further that the manufacturer should not expect the jobber to pay for those goods, if he found them unsalable. I think the

MANUFACTURER SHOULD GUARANTEE

if these goods are not salable on the introduction of a new article, he will protect them from loss. I think every manufacturer would be willing to do that. (Applause).

Then the interest of the jobbers to take hold of new articles is strengthened and he is induced to do the best he can to distribute them among the retail trade, and the manufacturer has no business whatsoever with the retailer. (Applause).

Another thing the cost of introduction to the manufacturer who does a legitimate business is less than it is if he attempts to distribute his goods up and down through the land to the retailers, hence he can afford to make a lower price to the jobber than if he distributes those goods himself.

I heard your discussion yesterday, in regard to department and

CATALOGUE HOUSES.

I sympathize particularly with the retailers. I think they have cause of complaint.

While in Chicago the other day, a gentleman connected with one of the leading houses showed me certain prices, quoted by a catalogue house. He said some of them were less than he could buy them at. If I were a retailer to-day, I would say, "I will meet every single price named in any catalogue sent out by these catalogue houses." You can do it, gentlemen. First it is cash, no discounts. If an article is offered at $1.50, the express from New York or Chicago is 25 cents or 50 cents say, to your customer for that amount plus the expressage. I will deliver you the same goods, meet the competition boldly, fairly and squarely and you can in a large way conquer it. On the other hand, I believe as sure as I stand here that the department stores and catalogue houses are here to stay and I do not believe all the legislation on the part of any association can drive them from the market. I remember distinctly of a house which several years ago could not get credit for $300. To-day this house is selling two and one-half millions a month. They have grown in spite of competition. They have cash to pay for their bills. Twenty-five years ago they were poorer than I was. To-day they are riding in carriages and have untold wealth. The way for you to meet that competition fairly and squarely to meet the prices, which can be done by every legitimate Hardware dealer in the United States, and can be done at a profit. There may be some exceptional articles on which dealers will even lose a little but that is the way, I think, to destroy competition. Because these large buyers will obtain their goods in some way, as you said yesterday. Even some jobbers furnish them by securing a surplus stock and delivering it to department stores.

JOBBERS' CATALOGUES.

Another thing I think the manufacturers may ask of the jobbers fairly and squarely—of every man that is publishing and printing catalogues should pay for it; that it should be a part of his expense account the same as a manufacturer makes it a part of his expense account. (Applause).

The organization of labor does not affect you as materially as it does the manufacturer. The manufacturer in New England and through the west are up against a big proposition. You see what the laboring classes are demanding in the cities. You see what the labor unions are demanding in the street car strike in Chicago—that they shall hire and discharge men only upon approval of the executive committee of the labor union. You see how they dictate that when they are sick the company shall pay for it and they select their medical attendants. Now these organizations are becoming very significant and they are occupying a very prominent position in the history of manufacturing and of industrial enterprises in America. Now, I am a friend of labor. I am the son of a mechanic. My father hardly earned a thousand dollars a year and yet he sent three sons to college and he died without owing anyone and left a home as admirable as any in the community in which he lived. I stand in the

Digitized by Google

DEFENSE OF LABOR.

I believe that every laborer who can earn $20 a day should have it. I stand for the men who build and construct and dig and for the farmer that produces the crops from which we derive all our prosperity. I stand in defense of all the labor interests of the community. I believe in good wages, but I believe that some men are worth one dollar and some are worth $20, and the employer of the labor must determine the value of the man's service. (Applause). I think labor organizations to some extent have benefited the wages of the laboring class, but when labor takes hold of our patriotism; when the labor unions say to the men that belong to our national guards, "You must be expelled from our association or you must give up the national guard"—when labor unions largely made up of foreign element put their hands upon the flag of our country, then, gentlemen, we must say hold back, hold back, patriotism and its bonds are stronger than labor unions and we are patriots above party. (Applause).

There are a great many questions that come to us as my text says, "The hand cannot say to the feet I have no need of thee." The manufacturers and jobbers must certainly work together in harmony. There are no differences. Your interests are our interests. Your success is our success. Your prosperity is our prosperity. None of us are in business for our health. We are in business to profitably and squarely obtain a living and more if we can in the conduct of a legitimate business. Let us as manufacturers make our goods and sell them to you at fair and equitable prices. Let us distribute our goods as manufacturers through the jobbers. Let the jobbers understand that they must furnish our goods at a fair profit to the retailers and in this way one helps the other. There are so many phases of this life, there are so many elements that enter into this body—so many differences of opinion that we cannot all agree, but I think the very basis of success—the very elements that make up this great organization of Hardware manufacturers, dealers and retailers as fine a body of men as can be collected. They are patriots; they are honest. It has been said that in no department of business is there so much capital and so much talent employed as in the Hardware business with so little results. We do not make, gentlemen, in the conduct of our business the profits that are made in other departments—of dry goods or in silverware, or in almost every other thing you may name. The legitimate Hardware dealers are not getting inordinately rich out of the business.

I listened yesterday to that list of noble heroes, most of whom I have personally known, who have fallen during the year. You honored them by rising in respect to the memory of their good deeds. It may not be unfitting that I speak of two or three others, which came to my mind since I heard this list read—perhaps they may not be members of your association. I want to mention Mr. Hibbard, perhaps the nestor of the Hardware trade, whom I knew for more than a quarter of a century, a man of iron and steel with a touch as tender as a baby, lifting up men; a man of great charities. He has fallen. Mr. Isaac W. Morton, of St. Louis. He has fallen out of the prime of life. Mr. Harry Blossom, of Cleveland, O. He, too, has been laid to rest. Mr. Hart, of Louisville. He accumulated a fortune. He has gone. Mr. Mortimer C. Ogden, of New York. He, too, has fallen. I stand in the shadow of a great sorrow, walking in the valley of death, as my son has been called since your last meeting.

So I say, gentlemen, in all these great problems of life remember that we are fast passing on. There are questions upon which we may differ. There are questions which may arise for debate and discussion. They are proper and light may be thrown upon them, but, gentlemen, there are vital questions upon which we do not differ. They are as much above the ordinary questions as patriotism is above party. They are the principles of integrity, of honesty and fair dealing; of honest conduct of man to man. Truthful statements should characterize the Hardware business in every department. Upon these foundations let us build that structure whose summit will reach to the skies and its basis shall be upon the solid rock of truth and justice. (Applause).

The coming generation of young men, I plead for them, that they shall be worthy of the trust imposed upon them. My whole speech, gentlemen, must be for truthful statements, for honest conduct of business, for the building up of a character which shall stand in the storm and that shall endure unto the end. One ship strikes east; another strikes west by the selfsame wind that blows. It is the set of the sails and not the gales which tell which way she goes. (Applause).

Mr. Frank R. Dickerson was next introduced. He spoke as follows:

JOBBERS' ASSOCIATION AS VIEWED FROM AN OUTSIDE STANDPOINT.

By Frank R. Dickerson.

Mr. President and Gentlemen:

You will appreciate the diffidence with which I, a guest of a Jobber's Association, approach the subject assigned for discussion. The subject is so vast that it is hardly practicable to do full justice in ten minutes or so, but perhaps we may discuss it at greater length another time. You recall the mother who went to the photographer to see about having pictures taken of her children, and to inquire whether there was sufficient daylight after school hours at this season of the year to have them taken. The photographer said there was and that he would be glad to take them any afternoon. She inquired the price and received the reply, $3 a dozen. She then said, "I have only eleven, I guess I had better come next year." If you ask me, perhaps I will come next year.

A Jobber's Association is a piece of human machinery by which certain results are obtained more readily than could otherwise be accomplished. In the investigation of a piece of machinery, we want to know the principle on which it is built, the details of the methods by which it works and then the results.

SOME PEOPLE LOOK ONLY AT THE RESULTS

without inquiring the principle by which it is obtained, or the methods used to accomplish the work. Let us examine this piece of human machinery, glancing first at the principle on which it is founded, then at the methods used and finally at the results.

All commerce is founded on gain, or profit, but gain may be developed along two lines, self love, or selfishness. Self love cannot be eliminated from commercial affairs; but selfishness should not be allowed to dominate. Selfishness exalts the affairs of the individual above those of his fellow; self love permits that in seeking individual gain the rights of one's neighbors be not infringed or curtailed. The Association is founded upon self love, not on selfishness.

THE ASSOCIATION SEEKS THE GOOD OF ALL,

but not the good of one at another's expense. The Association and its aims will not appeal to a man whose nature is selfish—nor to him whose motto is greed. The member of the Association will be one willing to co-ordinate his own interests with those of his neighbors; one who recognizes that the rights of his peers are equal to his own.

Another contributing principle on which the Association is founded is the increase of power by united action, as against individual action. It is a case of "United we stand, divided we fall." Power is to be admired only when wisely administered, but the history of most all of the Jobber's Associations is that the power which they wield has been used wisely, and especially is this true in the case of the National Hardware Association.

If the power be applied in favor of that which is honorable and for the best interests of the community, it is something which may well command our admiration, and, therefore, I find myself to be one of your admirers. That power can be manifested in two ways; by precept and by example, and as each individual contributes his part toward the whole Association, so as the

INDIVIDUAL MEMBERS OF THIS ASSOCIATION HAVE TAKEN THE HIGHEST MORAL GROUND

for their actions in so far have their deeds tended to add lustre to the honorable mention of the National Hardware Association.

While it is easier for most people to express noble thoughts than to act noble deeds, yet the fact that one is committed in the Association to the honorable course there enunciated will give individual support to such a line of action as is for the highest good of all.

I know that there has never been uttered from the plat-

Digitized by Google

form in these conventions a single thought tending to dishonor or corruption, and it is improbable that any speaker would ever dare to insult the members of the Association by any ignoble sentiment; but if in the future it might happen that disreputable sentiments should be uttered publicly from a platform of the Jobber's Association, I am confident that such a speaker would be consigned to the ignominy which he would richly deserve.

The President of a University recently said: "Mercantile honor is not unknown, but it is relatively rarer than heretofore." I believe the learned gentleman is mistaken, and would have been nearer the mark had he said:

MERCANTILE HONOR HAS NEVER BEEN RARE IN THIS COUNTRY,

but is relatively more frequent than heretofore, and the Associations of merchants are responsible for a higher standard of commercial integrity than ever before.

Turning to the methods by which the machinery is moved, a manufacturer is not often eager to show a visitor all the details as to how this is accomplished. Similarly, these Jobber's Associations do not permit the outsider a view of the inside workings, and, therefore, it is that you cannot expect an outsider to speak critically on this branch of the subject.

If we use the simile of the engine, we know that motive power is steam, generated in the boiler, so in an Association of merchants energy comes from the men and those men are the officers of the Association and those who act on the various committees. If they are wise and energetic, it will

FRANK R. DICKERSON.

show in the success of the Association and their enthusiasm will be communicated to the other members and thus insure a prosperous life to the Association. For this reason the members of an Association are careful in choosing their officers and the members of the standing committee, for upon them depends to a large extent the success of the organization.

If we examine a steam engine, perhaps the most notable feature to the casual visitor is the flywheel, that great large round wheel which apparently does nothing, but by which the engine is regulated, and so in this Association we see a large round body apparently doing nothing, but regulating the whole, and we call that large rotund body the secretary-treasurer. There is one difference, however, between the flywheel of an engine and the secretary-treasurer of the Jobber's Association; the flywheel operates noiselessly, but the secretary-treasurer is never quiet.

We might continue to examine the interior workings of the Jobber's Association, but for an outsider to attempt to go further might lead to dismal failure.

Let us now then turn to the results accomplished by this piece of human machinery, which is called a Jobber's Association. We have noted the power of such an organization, and naturally

THE FIRST EXPRESSION OF POWER IS ON THE LINE OF NATURE'S FIRST LAW—"SELF-PROTECTION."

So the power is exerted to protect the Association and its members from any adverse action on the part of the outsider. It has helped the individual to a greater extent than he could help himself, and has compelled the outsider to respect the Association and its individual members. Another result of power has been to correct abuses, some of long standing in the trade, and abuses which the individual member could not have corrected alone and unsupported. As we thus in an Association learn to know our fellow countryman better, we learn to like him better and hence to love the country which has given to us both our lives.

PATRIOTISM IS ENCOURAGED AND BECOMES A LIVING THING,

so that the glorious emblem of our country arouses enthusiasm and our love whether seen at home or abroad; therefore, the Jobber's Association, without intention, perhaps, but none the less surely, tends to make patriots, and also to make better citizens of us all.

Meeting in the friendly spirit as the members do, each one learns that his competitor is better, perhaps, than he thought. He learns to respect the other man for what he is and not for what he estimated him to be as a competitor. This friendly spirit is a wonderful power for good, and has a powerful influence in cementing the ties which bind us together. No one can attend these meetings without making stronger the ties of friendship which already exist—without making new friends among those who formerly were mere acquaintances.

Should the day come when that which we have so often seen in the past is to be repeated, when failures in business are not uncommon, I am sure

THESE ASSOCIATIONS WILL HAVE A SPLENDID INFLUENCE ON THE MERCANTILE COMMUNITY.

Where there is an honest failure in business, or where misfortune has overtaken a firm, it is certain that many members of these Associations will sympathize, and a helping hand will be readily extended. But it is also absolultely certain that where chicanery and deceit have been practiced, such a guilty party will be "sent to Coventry" by the members of these Associations, and in such a way as to prevent a repetition of his evil deeds.

Another result of the Jobber's Association is on the social side also, but I feel that any words I might utter would be but poor tribute to lovely woman, who graces by her presence these annual conventions. Where she comes she brings refinement, she brings peace and love and harmony. We love her and love to have her with us. Woman now has for years been taking her place in the commercial life, and it is only fitting that as she has some of the work, she should also have some of the joys. Whether they be our wives, or our sweethearts, our mothers or our daughters, we welcome them to our midst. We are glad of woman's presence, for she diffuses a halo of grace and beauty around these meetings of the Jobber's Association.

Mr. Dickerson referred to the question of settling differences between the manufacturers and the Hardware jobbers and dealers. He said the best organization through which to secure results was the National Hardware Association. He instanced the results that had already been achieved in the adjustment of trade difficulties by that organization. He expressed the opinion that theq were inspired by the highest motives; that their success was largely due to the care exercised by them in selecting their executive officers. He referred to the increased attendance of the ladies at the meeting of the conventions and the refining influence of their presence.

Mr. Oliver Williams, of the Bryden Horseshoe Co., addressed the associations. He read a list that had been prepared by a trade paper showing the percentage of other goods than Hardware that were sold by the retail Hardware trade. He spoke of the increasing tendency of Hardware dealers to add to their line of goods articles that were not legitimately a part of that trade; that it was a very difficult matter to draw the line as to who should be called a legitimate Hardware dealer and who should not.

Mr. Brace Hayden, of San Francisco, addressed the meeting on behalf of the legitimate jobber. He urged upon the manufacturers to confine their sales to legitimate Hardware dealers, or those who made this business their principal occupation. He said this action on the part of the manufac-

Digitized by Google

turers would tend to build up the legitimate Hardware dealer and thus distribute the goods through the natural channel. Remarks were made by Mr. Hostetter, of Omaha, on the condition of the Hardware trade at Omaha. H. H. Bishop, of Cleveland, also Mr. Chas. W. Asbury spoke on the subject.

Before adjournment Mr. F. S. Kretsinger, of Cleveland, offered the following resolution:

Resolved, That at this joint meeting of the National Hardware Association and the American Hardware Manufacturers' Association we admit a debt of gratitude and we most heartily tender to the Reading Hardware Co. our sincere thanks for the pleasure afforded us and our friends by the delightful and beautifully rendered music by the Ringgold Band.

The resolution was seconded and adopted by a rising vote.

The associations then took a recess until the next morning at 10 o'clock.

Friday.

The manufacturers assembled in executive session at 10 A. M. and elected the following officers:

J. C. Birge, St. Louis Shovel Co., president.

Henry B. Lupton, Oliver Iron & Steel Co., vice-president, in place of Mr. Birge.

F. D. Mitchell was re-elected secretary-treasurer.

C. W. Asbury was continued as chairman of the Executive Committee, and in the place of Messrs. Lupton, Holt, Landers and Clark, the following were appointed: E. B. Pike, Pike Mfg. Co.; Geo. P. Hart, Stanley Works; Wm. M. Pratt, Goodell-Pratt Co.; E. G. Buckwell, Cleveland Twist Drill Co.

The following manufacturers and representatives were present:

D. A. Merriman, T. H. Taylor, T. B. Coles; American Steel and Wire Co., Chicago, Ill. Chas. L. Gilpin; American Sheet Steel Co., New York City. Frank Dickerson, Edward H. Brooks; American Tin Plate Co., New York City. F. S. Kretsinger, J. A. Carter; American Fork and Hoe Co., Cleveland, O. Wm. G. Smithe; American Screw Co., Providence, R. I. George Reuter, Jr., G. H. Jantz, James Richens; The American Wringer Co., New York City. N. A. Gladding, W. L. Sandford, J. F. Carey; E. C. Atkins & Co., Indianapolis, Ind. Henry G. Atha, Edward Ingalls; The Atha Tool Co., Newark, N. J. Henry W. Avery; The Avery Stamping Co., Cleveland, O. Alfred W. Barnett, Henry W. Scattergood, Tom Almgill, Joseph M. Hottel; G. & H. Barnett Co., Philadelphia, Pa. S. G. Gilfillan; Belfont Iron Works Co., Ironton, O. Charles B. Adamson; Baeder, Adamson & Co., Philadelphia, Pa. H. B. Lashar; The Bridgeport Chain Co., Bridgeport, Conn. A. E. Bronson, E. A. Walton; The Bronson-Walton Co., Cleveland, O. Wm. Brusstar; The E. & G. Brooke Iron Co., Birdsboro, Pa. Oliver Williams; Bryden Horse Shoe Co., Catasauqua, Pa. R. H. Plumb; Buffalo Bolt Co., Buffalo, N. Y. J. W. Brainard, James B. Bonner; Carnegie Steel Co., Pittsburgh, Pa. G. D. Waterman; Henry Cheney Hammer Co., Little Falls, N. Y. H. W. Caldwell; Cleveland Stone Co., Cleveland, O. E. G. Buckwell; Cleveland Twist Drill Co., Cleveland, O. R. B. Jones; The Clyde Cutlery Co., Clyde, O. Charles Glover, Clarence A. Earl, A. W. Bowman; Corbin Screw Corporation, New Britain, Conn. C. M. Jarvis, W. E. Bartholomew, George A. Overton, George L. Haven, William Bishop, C. B. Parsons, C. H. Parsons; P. & F. Corbin, New Britain, Conn. Geo. W. Corbin, Geo. L. Corbin, C. H. Baldwin, Geo. F. Taylor, E. C. Griswold; Corbin Cabinet Lock Co., New Britain, Conn. John R. Hoagland; Chicago Hardware Co., Chicago, Ill. W. C. Davenport; W. H. Davenport Fire Arms Co., Norwich, Conn. H. B. Plumb, G. W. Carter, C. W. Plumb; Eagle Lock Co., New York City. Chas. W. Asbury; Enterprise Mfg. Co., Philadelphia, Pa. Robert Garland; Garland Nut and Rivet Co., Pittsburg, Pa. Chas. J. Graham; Graham Nut Co., Pittsburgh, Pa. D. H. Goodell, R. C. Goodell, A. W. Bond; Goodell Co., Antrim, N. H. Wm. M. Pratt; Goodell-Pratt Co., Greenfield, Mass. Grafton Stone Co., Elyria, O. G. E. Needham; The Gary Iron and Steel Co., Cleveland, O. Williston B. Penfield; The Hamilton Rifle Co., Plymouth, Mich. Norman P. Cooley; Hart & Cooley Co., New Britain, Conn. The Hazard Powder Co., New York City. Paul E. Heller, Elias G. Heller; Heller Bros. Co., Newark, N. J. Charles B. Lee, Edward E. Perry; Hopkins & Allen Arms Co., Norwich, Conn. Ralph H. Binns, Geo. V. Wilson; Hussey-Binns Shovel Co., Pittsburgh, Pa. E. W. Zinsmaster; Hubbard & Co., Pittsburgh, Pa. J. T. Rader; International Cutlery Co., Fremont, O. J. Lovell Johnson, Thomas Ellis; Iver Johnson's Arms and Cycle Works, Fitchburg, Mass. George G. Price; Kelly Axe Mfg. Co., Alexandria, Ind. E. W. Mudge; La Belle Iron Works, Steubenville, O. George M. North; The Lamson & Sessions Co., Cleveland, O. Charles F. Smith, George M. Landers, James N. Stanley; Landers, Frary & Clark, New Britain, Conn. F. W. Davis; Lake Erie Iron Co., Cleveland, O. A. W. Walker, Chas. S. Meacham; Lovell Manufacturing Co., Erie, Pa. H. G. Hollis, S. B. McGee; The Lufkin Rule Co, Saginaw, Mich. Hugh McCaffrey, Edward V. McCaffrey, Joseph J. McCaffrey; McCaffrey File Co., Philadelphia, Pa. Joseph R. Mann; Mann Edge Tool Co., Lewistown, Pa W. S. McKinney, C. M. King; McKinney Mfg. Co., Allegheny, Pa H. A. Curtis; Meriden Cutlery Co., Meriden, Conn. F. D. Mitchell, Secretary-Treasurer, "A. H. M. A." Philadelphia, Pa. Edward S. Jackson; Miller Lock Co., Philadelphia, Pa. E. P. Stoughton; Millers Falls Co., New York City. J. A Hurdle; Charles Morrill, New York City. Thomas Devlin, Wm. John Devlin; National Hdwe. and Malleable Iron Works, Philadelphia, Pa. Wm. J. McCurdy; Never Slip Mfg. Co., New Brunswick, N. J. Wallace L. Pond, E. D. Fisk; Nicholson File Co., Providence, R. I. J. E. Williams; National Screw and Tack Co., Cleveland, O. R. H. North, A. C. Albrecht; North Bros. Mfg. Co., Philadelphia, Pa. H. C. Noble; North & Judd Mfg. Co., New Britain, Conn. W. T. Norton; Norton Tool Co., Cleveland, O. Wm. E. Jones, Wm. G. Miller; Ohio Tool Co., Columbus, O. Henry B. Lupton; Oliver Iron and Steel Co., Pittsburgh, Pa. P. B. Noyes; Oneida Community, Ltd., Kenwood, N. Y. W. H. Lyon; The Charles Parker Co., Meriden, Conn. J. S. French, T. H. Keller, Geo. R. Benjamin; The Peters Cartridge Co., Cincinnati, O. E. B. Pike, E. Bertram Pike, H. E. Smith, E. Warren Smith; The Pike Mfg. Co., Pike Station, N. H. F. H. Forman, Tom T. Johnson, Wm. Taylor, W. C. Reitz; Pittsburgh Steel Co., Pittsburgh, Pa. Pittsburgh Screw and Bolt Co., Pitsburgh, Pa. Fayette R. Plumb, Wm. R. Howell, J. J. Teeple; Fayette R. Plumb, Inc., Philadelphia, Pa. M. Harbster, Wm. M. Griscom, John E. Harbster, A. A. Gery, H. L. Boas, G. N. Jacobi, T. B. Hendrickson, W. H. Bennett, F. A. Schumacher, C. S Packard, George McCord; Reading Hardware Co., Reading, Pa. W. B. Johnson, G. W. Turney; Rome Manufacturing Co., Rome, N. Y. O. P. Schriver; O. P. Schriver & Co., Cincinnati, O. Daniel Simonds, J. E. Kelly, G. T. Curtis; Simonds Manufacturing Co., Fitchburg, Mass. John C. Schmidt; Standard Chain Co., Pittsburg, Pa. Fred. S. Merrick; Standard Horse Nail Co., New Brighton, Pa. R. M. Boutwell, S. L. Martin; Standard Horse Shoe Co., Boston, Mass. A. W. Stanley, Robt. N. Peck; Stanley Rule and Level Co., New Britain, Conn. George P. Hart, A. C. McKinnie, L. H. Pease; The Stanley Works, New Britain, Conn. I. H. Page, F. E. Muzzy, A. H. Griffin; J. Stevens Arms and Tool Co., Chicopee Falls, Mass. Julius C. Birge, Walter W. Birge; St. Louis Shovel Co., St. Louis, Mo. F. J. Schollhorn; The Wm. Schollhorn Co., New Haven, Conn. John E. Gaitley; Troy Nickel Works, Albany, N. Y. C. S. Van Wagoner, L. F. Blue, A. A. Fonda; The Van Wagoner Co., Cleveland, O. J. D. Warren, W. H. Hogg.; J. D. Warren Mfg. Co., Chicago, Ill.

Among the visitors were the following:

Irby Bennett, Memphis, Tenn. A. C. Barrell, New York. Wm. C. Biddle, New York. W. C. Bigelow, New York. Frank R. Blauvelt, New York. W. P. Boganus, Mt. Vernon. A. Eugene Bolles, New York City. C. B. Carter, Knoxville, Tenn. W. H. Cole, New York. F. E. Corey, Newton Falls, O. F. E. Corey, New York City. M. L. Corey, Argos. Sam. T. Crissy, New York City. Rev. John R. Davies, Philadelphia, Pa. Samuel Disston, Philadelphia, Pa. Alexis DuPont, Wilmington, Del. Jos. H. Grubb, Philadelphia. James Hardy, Toronto. Thomas Hobson, Philadelphia. Chas. W. Hubbard, New York. W. D. Hodson, Marion, Ind. Peleg Howland, Toronto. A. Sidney Jacobus, Passaic, N. J. Sidney P. Johnston, Chicago, Ill. James H. Kennedy, New York City. W. J. Lockwood, New York. Geo. N. Lukens, New York City. D. T. Mallett, New York. A. P. Mitchell, New York City. C. A. Needham, Cleveland, O. T. H. Newman, Montreal. Alex. A. Norton, Chicago, Ill. W. P. Obdyke, Philadelphia. Thomas Oliver, New York. W. B. Paulscraft, Pittsburg. H. H. Roberts, Chicago, Ill. J. T. Rountree, San Francisco, Cal. J. T. S. Kelley, Wilmington, Del. R. J. Slater, Montreal. Daniel Stern, Chicago, Ill. W. R. Walkley, New York. R. R. Williams, New York City. F. G. Wooster, New York.

Among the large number of ladies whose presence added so much to the enjoyableness of the convention were the following:

Mrs. Charles Allen, Philadelphia. Mrs. A. C. Albrecht, Philadelphia. Mrs. Tom Almgill, Philadelphia, Pa. Mrs. Charles W. Asbury, Philadelpria, Pa. Mrs. H. E. Barden, Wallingford, Vt. Mrs. H. B. Barden, Wallingford, Vt. Mrs. Henry W. Barnett, Philadelphia, Pa. Mrs. W. E. Bartholomew, New York. Mrs. J. C. Bauer, Topeka. Miss Bihler, Pittsburg. Mrs. H. B. Black, Chester, Pa. Mrs. H. L. Boas, Reading, Pa. Mrs. Irving D. Booth, Elmira. Mrs. C. F. Bragg, Bangor. Mrs. A. G. Brown. Mrs. H. W. Caldwell, Cleveland, O. Mrs. C. F. Carrier, Elmira, N. Y. Mrs. C. B. Carter, Knoxville, Tenn. Mrs. William Chamberlain, Portland. Mrs. C. D. Clark, Peoria. Miss Lucie B. Clark, Peoria. Miss Marie V. Clark, Peoria. Mrs. J. B. Cobb, Boston. Mrs. John Conover, Kansas City. Mrs. H. A. Curtis, Meriden, Conn. Mrs. Thomas Devlin, Philadelphia, Pa. Mrs. Samuel Disston, Philadelphia. Miss Edna Disston, Phila. Miss Dudley, Nashville. Miss Josephine Fernley, Philadelphia. Miss Hattie Fernley, Philadelphia. Miss Josephine Fernley, Philadelphia. Mrs. John E. Gaitley, Albany, N. Y. Mrs. Robert Garland, Pittsburg, Pa. Miss Alice G. Garland, Pittsburg, Pa. Mrs. John E. Harbster, Reading, Pa. Mrs. Arthur C. Harvey, Boston. Mrs. T. B. Hendrickson, Philadelphia, Pa. Mrs. F. W. Hurty, St. Paul. Mrs. George I. Irvin, Baltimore. Mrs. G. N. Jacobi, Reading, Pa. Mrs. C A. Jewett, Cleveland. Mrs. R. A. Kirk, St. Paul. Mrs. C. A. Knapp, Sioux City. Mrs. R. O. Kohler, Catasauqua, Pa. Mrs. F. S. Kretsinger, Cleveland, O. Mrs. W. J. Lockwood, New York. Miss Lockwood, New York. Miss Jeannette M. Lupton, Pittsburg, Pa. Mrs. F. P. May, Washington. Mrs. Wm. J. McCurdy, New Brunswick, N. J. Mrs. W. S. McKinney, Pittsburg, Pa. Mrs. F. D. Mitchell, Philadelphia, Pa. Mrs. F. E. Muzzy, Chicopee Falls, Mass. Mrs. R. H. North, Philadelphia. Mrs. G. A. Overton, New York. Mrs. L. H. Page, Chicopee Falls, Mass. Mrs. W. B. Paulscraft, Pittsburg. Mrs. William C. Peters, Philadelphia. Mrs. E. B. Pike, Pike Station, N. H. Miss Katehrine Pike, Pike Station, N. H. Mrs. Wm. M. Pratt, Greenfield, Mass. Miss Grace Ames Rader, Clyde, O. Mrs. George Reuter, Jr., New York. Mrs. H. G. Reynolds, Dixon, Ill. Miss Lucile Reynolds, Dixon, Ill. Mrs. H. H. Roberts, Chicago, Ill. Mrs. John H. Robbins, Boston. Mrs. Daniel Simonds, Fitchburg, Mass. Miss Stern, Chicago, Ill. Mrs. P. E. Strauss, Boston. Miss Supplee, Philadelphia. Miss Frances Supplee, Philadelphia. Mrs. Rudolph Tenk, Quincy. Mrs. G. W. Trout, Chicago. Mrs. H. W. Waite, Boston. Mrs. W. Q. Wales, Boston. Mrs. W. R. Walkley, New York. Mrs. H. L. Doten, Boston.

The Banquet.

Friday evening, at 8.30 the delegates and visitors assembled in the large dining room of the Rudolph and partook of the annual banquet. Covers had been laid for nearly 500 people, and by actual count there were 414 seated. The presence of an unusually large number of ladies added greatly both to the beauty of the scene and enjoyableness of the occasion. At no previous convention has there ever been so large an attendance of the wives, daughters and sweethearts of the Hardwaremen, and much favorable comment was aroused owing to this fact.

At the speakers' table, which was placed upon a platform lifted above the others, sat the following well-known men: Robert Biddle, T. James Fernley, W. W. Supplee, John Bindley, Mayor Stoy, of Atlantic City; James H. Kennedy, Geo. Henry Sargent, Willis L. Moore, chief of the weather bureau; Charles Emery Smith, Retiring President Plumb and President-elect Birge, of the Manufacturers' Association; Retiring President Kirk and President-elect Bigelow, of the Jobbers' Association; F. S. Kretsinger, H. H. Bishop, Brace Hayden, John C. Koch, John Freeman and Chairman of Reception Committee H. B. Lupton.

The following menu was served in the usually skillful manner of the Rudolph management and was greatly enjoyed by all:

Menu.

Canape Caviare
Blue Point Oysters — Amontillado
Black Bean Soup — Sauterne
Olives — Celery — Radishes — Salted Almonds
Broiled Bluefish Maitre D'Hotel
Sliced Cucumbers — Pommes Noisette
Lobster a la Newburg
Punch Parfait Amour — Cigarettes
Fried Spring Chicken, Maryland Style
Julienne Potatoes — Brussels Sprouts — G. H. Mumm & Co.s Extra Dry
Lettuce and Tomato Salad
Neapolitan Ice Cream — Fancy Cake — White Rock
Roquefort and Cream Cheese
Toasted Crackers
Demi Tasse — Cigars

When coffee was served the distribution of the Bronson-Walton "Never-Burn" Cigars created a great deal of merriment. As the cigars that would burn were distributed, Mr. Lupton arose and in a few well chosen remarks, introduced Fayette R. Plumb toast-master of the evening.

Mr Lupton spoke of the evolution of combinations, starting with families in the days of the patriarchs and ending with the great organization of the present day. He spoke forcibly concerning the value of associations such as were represented on this occasion, and paid a strong tribute to Mr. Plumb for his personal work in the advancement of the work of both the associations.

Mr. Plumb was greeted with great applause as he arose to thank the chairman for the honor conferred. In a few words he welcomed those present, especially the jobbers, who were the guests of the manufacturers on this occasion. He spoke briefly of the growth of the manufacturers organization which started in Cleveland two years ago with 50 members, and which now carries on its roll 175 of the strongest concerns in the Hardware business and which represent a capital larger than that of any other business organization in the world. He then introduced the new president of the Manufacturers' Association, Mr. Julius C. Birge, of the St. Louis Shovel Co.

As the new president gradually arose to his towering height, the banqueters prepared themselves for something good which always comes when Mr. Birge talks in public. After nearly convulsing those present with a number of stories, including a number of side remarks concerning Mr. Bigelow, Mr. Birge spoke feelingly concerning the hard work done individually by many members of the Manufacturers' Association for its advancement. He said in closing that it would be his highest ambition during his term as president of the Association, to hold the esteem of its members.

Toastmaster Plumb then introduced the new president of the Jobbers' Association, Samuel A. Bigelow, of Bigelow & Dowse, Boston. Mr. Bigelow, after accusing Mr. Birge of having stolen his thunder by watching him while he had been taking notes, stated in a more serious vein that it would be his ambition to bring the two Associations more closely together. He commented on the number of ladies that were present, and extended to them a hearty invitation to future conventions.

Toastmaster Plumb then introduced the main speaker of the evening, Charles Emery Smith, of Philadelphia. In his remarks, the Toastmaster referred with feeling to the close acquaintance which existed between Mr. Smith and our late lamented President McKinley.

That his remarks touched the hearts of the audience was shown by the fact that as Mr. Smith arose, a man arose from one of the tables and said: "I am a Southern man, but I wish to propose a toast to Mr. McKinley. I believe it a most opportune time for such occasion, and I suggest that we drink the toast standing." The banqueters needed only the suggestion for in a moment they were all on their feet and silently drank the toast to the memory of that President who had found a warm place in the hearts of all, regardless of party. Mr. Smith was very much affected by the tribute to his friend and thanked the banqueters in words full of deep feeling. He spoke briefly of President McKinley's desire throughout his entire life to establish a more substantial reunion of the North and South. It would be impossible to put in cold type the speech which Mr. Smith delivered on this occasion, that is, to print it in the manner in which it was given or to even suggest its effect on the listeners. We will, therefore, give only a brief sketch, covering a few of the most important points made. After speaking in a pleasant vein, he took up his subject, "Our National Development." He spoke briefly concerning the development of the world during the past several centuries; of the wars that had occurred and stated that the wars of the present day were not wars of cannon but wars of commerce. This is an era of gigantic revival; all nations, ourselves at the head, will struggle for control of trade, and while struggling for commercial control will struggle for control of the world. Thirty years ago, England held the sceptre of commerce, now we hold it. Our commerce is now three times as large as that of England, and as large as England, France and Germany combined. Our trade is growing twice as fast as that of these three nations. Last year the earnings of the people of the United States of all classes were equal in actual value to one-half of the accumulated wealth of the United States thirty years ago. The Americans are the greatest spenders; the greatest consumers, and the greatest producers. Notwithstanding their being in the lead as spenders, our gain in wealth amounts to six million dollars per day. In spite of Wall Street's frequent fits of indigestion because of their inability to assimilate indigestible securities, the body politic is sound and healthy, and will continue to move on in spite of temporary troubles or of clouds on the horizon of business. We are the great great self-sustaining people of the world. We are not in any particular dependent on any other nation. Mr. Smith then spoke of our great national resources; of the enormous beds of coal, iron and other minerals; and the fertile farm lands of the West and South, and said that notwithstanding the fact that we were well prepared for a commercial struggle, we must stand on guard to

PROTECT OUR INTERESTS.

We must take care of our commercial weapons. One of our chief weapons is reciprocity. Reciprocity may be extended to nearly all of the nations, if not quite all, but it must not in any respect interfere with home production. The Monroe Doctrine is the dominating law of the western hemisphere, and all the world respects it. We are going to dig the Panama Canal; (extended applause greeted this statement); we are going to control it; no bandits of Bogota or others can prevent it. In closing, Mr. Smith related an incident which occurred during the Chinese War, illustrating the fact that our flag is not the flag of a Czar, a Queen, or

Digitized by Google

Kaiser, but that it is a flag of each individual citizen of this country. At the close of this story, the banqueters exhibited their patriotic feelings by arising in a body and singing "The Star Spangled Banner."

Willis L. Moore, Chief of the Weather Bureau at Washington, was then introduced. He opened his address by telling a number of exceedingly funny stories, then following the example of the other speakers, spoke concerning the presence of so many ladies at the banquet. He related several experience which he had during a trip in Europe as an illustration of the American man's deference to women and of the lack of it in many foreign countries. He stated that American citizenship was not degenerating and made a strong appeal for citizenship instead of partisanship. He spoke of the struggles of our forefathers, the pioneers of this great country and of their sterling qualities and aggressiveness, and closed by saying, "You can no more stop the growth of American citizenship and commerce than you can suspend the force of gravitation."

Mayor Stoy, of Atlantic City, welcomed the banqueters and visitors and congratulated them on having chosen Atlantic City as the place for their 1904 convention.

The last speaker on the programme was James H. Kennedy and notwithstanding the fact that it was long past midnight he had no trouble whatever in holding the closest of attention, and with his many witty remarks almost convulsing the banqueters with laughter. He told a number of very humorous stories illustrating the points in his address on the subject, "Hypnotism and Hardware," among them being a story, which he alleged was true, of the boyhood days of President Plumb. As a tribute to Secretary Fernley he read the following poem, claiming that it came from the pen of George H. Sargent:

"Ballads of the Hardware Trade."

Atlantic City lies serene
Where waves roll vain against the land,
And nothing there so fair to see
As Fernley strolling on the sand.

As Fernley, in the early morn,
At noon or on the edge of night,
Stands there in all his stately form,
And shuts the ocean from our sight,

The seagulls wing on noiseless flight;
The wild clouds flee in sudden wrath;
The waves flow up and flood the land,
When ponderous Fernley takes a bath.

The waves roll back and leave the shore,
As waves from ages past have done,
When Thomas rises from the surf
And stands erect beneath the sun.

Some men love honor; some love fame;
Some waste their years in search of pelf;
But Fernley when he bathes, but asks
The whole Atlantic for himself.

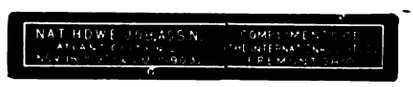
He closed by saying that something more than hypnotism joined the Hardwaremen together. They come to the convention because fraterity is their watchword, and in bettering themselves they have learned the noble lesson of doing good to others.

At the close of Mr. Kennedy's address, Mr. Asbury, chairman of the Executive Committee, spoke briefly concerning the addresses of evening stating that the banqueters had been entertained, educated, uplifted and made better citizens. He moved that a rising vote of thanks be extended to the speakers. This was carried unanimously.

SOUVENIRS.

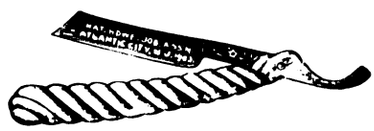
E. C. ATKINS & Co. gave a handsome desk match safe, a very useful article, especially for smokers.

J. STEVENS ARMS & TOOL Co., gave a Franklin Fountain Pen properly inscribed with the Stevens firm name. The pen with filler was enclosed in a neat box printed in two colors. The demand for this souvenir was so great that the supply was entirely exhausted.



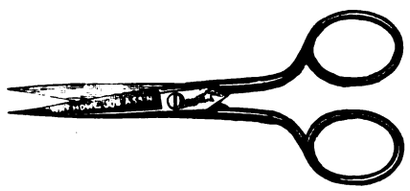
TENGWALL FILE & LEDGER Co., Chicago, gave memorandum books with leather covers. The binding being the same as used on their famous ledgers.

SIMONDS SAW Co. gave a leather backed memo pad, an article considered very useful by the recipients.

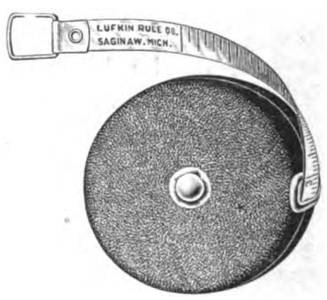


ACME SHEAR Co., of Bridgeport, Ct., represented at the convention by John T. Richards gave out "Acme" scissors.

J. C. PEARSON Co., Boston, gave japanned match boxes.



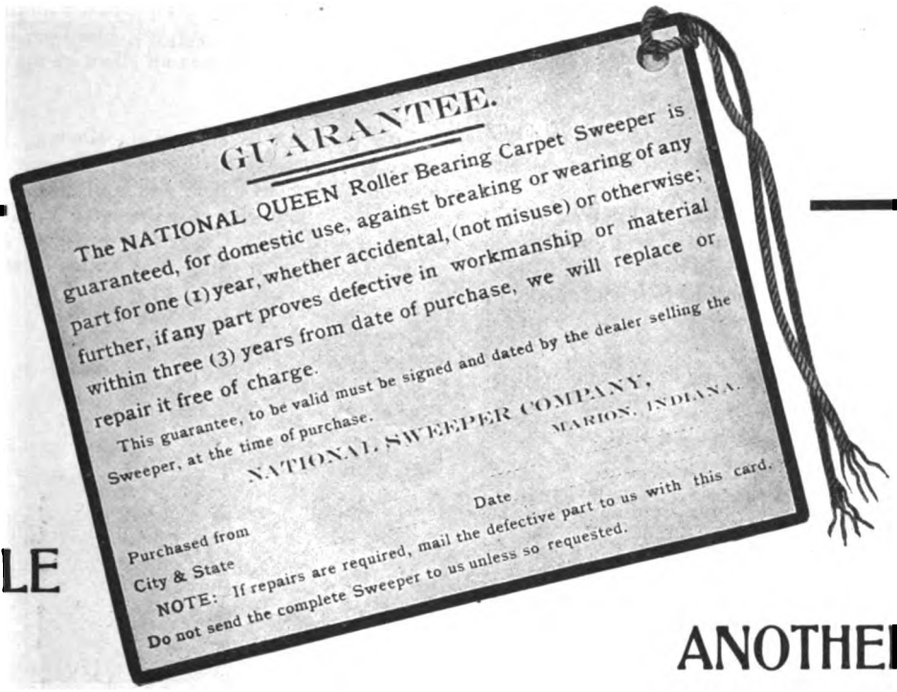
THE INTERNATIONAL CUTLERY Co., Fremont, O., represented at the convention by J. T. Raeder, gave two very useful souvenirs. One was a Wave Ivory Handle Corn Razor, their



regular No. XX, which we illustrate herewith made of the

finest steel enclosed in a red morroco box. The other souvenir was a pair of "Star" brand scissors which we also illustrate.

LUFKIN RULE Co. gave a very handsome steel tape which we illustrate herewith. This article has just been placed on the market by the firm and the fine quality of workmanship



on this souvenir is an illustration of the care used by the Lufkin Co. in turning out goods.

S. R. DROESCHER of New York gave a pocket knife of very convenient size.

SMITH & HEMMENWAY of New York gave a souvenir which no doubt proved useful to many of the visitors. It was a celluloid case properly inscribed with a reproduction of the "Green Book" cover, containing court plaster.

The trade mark "Never Burn" used on the goods of the BRONSON-WALTON Co., of Cleveland, will be indelibly impressed on the memories of the smokers of the convention. At the banquet on Friday night after coffee had been served the guests were each handed a very excellent (appearing) cigar. Around each cigar was a paper band on which appeared the trade mark "Never Burn." The odor was perfect and the wrapper was plainly of the finest havana. But—

A NEW WRINKLE

ANOTHER "NATIONAL WAY."

A GUARANTEE CARD,—of which the above is a fac-simile, is attached to each "National Queen" Roller Bearing Sweeper. An all convincing argument of their durability and efficiency in every particular. . No other make of sweeper is guaranteed, as are the National. It assists in making quick sales and more of them.

All National Roller Bearing Sweepers have improved patented features not to be obtained in any other make. They are much simpler in construction, have fewer parts and do more thorough work. They are sold at prices which insure a large and certain profit. "The proof of the pudding is in the eating," we furnish the pudding. . . .

A Useful and Novel Souvenir

will be sent to Dept. Managers, Adv. Managers, Buyers, and Window Dressers, who make the request on the letter head of their firm, stating position held and enclosing a two cent stamp to cover postage. This will prove interesting to any of the above, offer good until Dec. 20, 1903.

National Sweeper Company,

1901 PARK STREET, Marion, Indiana.

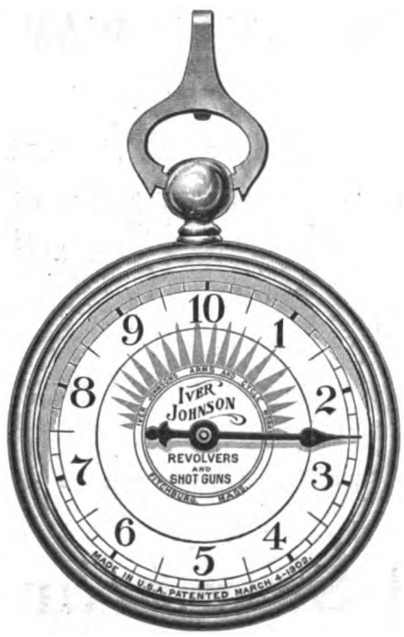
when they were lighted they accepted the fire—and that was all. On examination the filler of the cigar was found to be of mineral wool which will take fire about as quickly as the famous goods of this firm. The Bronson-Walton Co. also gave ash trays made as miniature "Never Burn" dripping pans.



FAYETTE R. PLUMB INC., of Philadelphia, gave to the visitors an embossed leather cribbage score.

NORTON TOOL CO. gave to the jobbers hatchets made in their factory.

THE READING HARDWARE CO., gave to those who visited their exhibition rooms a handsome book of views of Atlantic City, and a paper weight in the form of a frog in both silver and bronze finish.

MCCAFFREY FILE CO., of Philadelphia, manicure file in leather case.

THE IVER JOHNSON ARMS & CYCLE CO. gave a pedometer a very acceptable souvenir. We illustrate it herewith. With the pedometer was given complete instructions for its use.

THE UNION METALLIC CARTRIDGE CO. presented to members of the Jobbers' Association, through its representative, A. C. Burrell, a paper weight, representing a box of .32 revolver cartridges. These are rather cleverly constructed of wood weighted with a lead slug; labeled with the regular cartridge box labels and coated with celluloid by a new process, which makes them waterproof and practically indestructible. These souvenirs belong to the limited class of good "desk reminders," which will be sought after only by dealers in ammunition and will doutless prove a useful and permanent desk companion.

THE NEW BRITAIN manufacturers gave to the visitors to their headquarters on the fifth floor a beautiful book which comprises a history of New Britain as a manufacturing center and contains many elegant illustrations of New Britain plants and its pioneer manufacturers. It contains a brief history of each organization and as far as its typographical make up is concerned it is a work of art and will without a doubt be preserved in the homes of all who were fortunate enough to receive a copy.

THE TROY NICKEL WORKS, of Albany, New York, represented at the convention by John E. Gaitley, the proprietor, gave a celluloid pen-wiper very handsomely lithographed. Mr. Gaitley also ran the risk of getting into trouble with the Atlantic City police by giving out a large number of miniature roulette wheels. As yet, however, no serious developments have taken place as an effect of the giving out of these souvenirs.

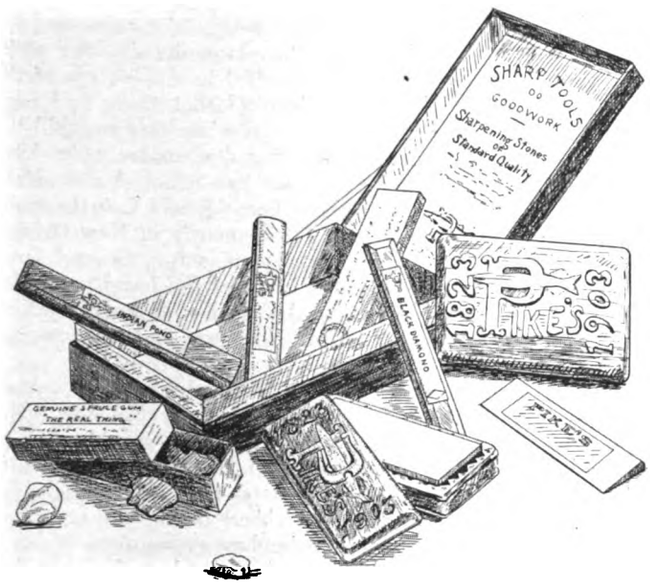
THE NATIONAL SWEEPER CO., Marion, Ind., pleased both men and women by giving to the former a handsome watch fob—the ribbon of black silk and the swivel and charm of gold plate. The charm represents a miniature "Marion" carpet sweeper. The souvenir complete is illustrated herewith. Thursday at dinner the ladies of the convention were

given a box of candy. The box was a miniature of the patented carton used in shipping sweepers by the National Sweeper Co., printed in colors and neatly wrapped in transparent paper. The candy was the best to be procured and of course the ladies were pleased.

Mr. Pond of the NICHOLSON FILE CO. gave two different styles of vest pocket match cases, both of leather and high quality of workmanship.

J. D. WARREN MFG. CO., Chicago, presented the visitors

with a pack of very handsome card dominoes in a leather case. It is illustrated herewith.



♣

Major Blublud—Well, suh, I s'pose win flowed like watah at the kun'l's weddin', suh?

Major Pepper—Like watah, suh? By gad, suh, it flowed like oil in a Texas oil company's advertisement, suh.—*Judge.*

A collection of souvenirs both unique and useful were given out by the Pike Mfg. Co.

THE PIKE SOUVENIRS.

They consisted of two different sizes of glass mounted desk stones, a silver mounted desk hone, and a handsomely decorated case containing the three principal products of New Hampshire, viz: Spruce gun, maple sugar and miniature samples of Pike scythe and whet stones.

CONVENTION NOTES.

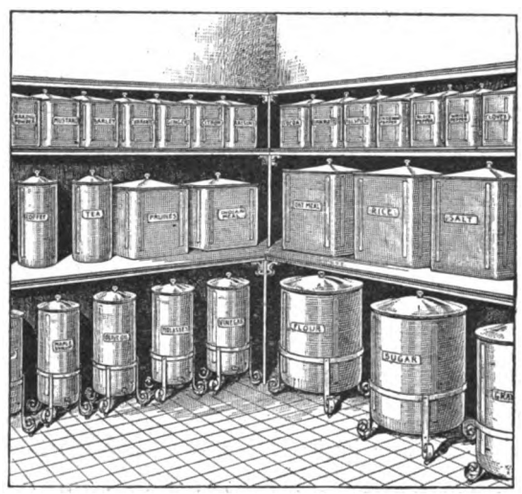
Fernley's twins constituted the prize exhibit. T. James evidently believes in making Hardwaremen acquainted with these future secretaries at an early age.

Oneida Community reported more orders by mail during the past three weeks for chains and traps than during any similar period in their history. That don't look like poor business.

Uehling-Decker Co., Passaic, N. J., exhibited their Pyro Heater.

The New Britain manufacturers kept open house on the fifth floor.

Reading Hardware Co., in their suite on the second floor exhibited the different processes of making the products of their factory.



Columbian Enamelling & Stamping Co. showed a line of samples on the third floor.

Tengwall File & Ledger Co. had on exhibition a sample line of Tengwall Ledgers.

A photograph of the conventioners was taken by Fred Hess of Atlantic City.

Mr. Gould of Wood Shovel & Tool Co., Piqua, O., said: "By December first we will have in operation the most complete shovel factory in America."

The Appert Glass Co., of New York, gave an exhibition of their unbreakable glass water coolers and jars.

E. C. Atkins & Co. kept open house in Parlor, K. where refreshments were served to the thirsty.

J. C. Pearson Co., Boston, exhibited by test their cement coated nails.

"I didn't like the minister's remarks over poor John," said Gayboy's widow. "Did you notice how he said from 'whose bourne no traveler returns?'"

"Yes. He pronounced 'bourne' as if it were spelled b-u-r-n."

"Yes, and just after that he said: 'Peace to his ashes.'"

For Slate Roof and Bedding Slate.

There is nothing made equal to it; it holds the slate firmly in place; it will always remain elastic; it will last for an indefinite period; it is not affected by heat or cold; it neither hardens, cracks, nor runs; it becomes sufficiently stiff to remain where placed. Just the thing to make an absolutely tight roof.

For Leaky Roofs

You can make them as tight and dry as any new roof ever put on; it doesn't make any difference whether the old roof is *Tin, Metal, Slate, Tar* or *Shingles*. Fill the crevices, cracks and holes with SLONE ELECTRIC CEMENT; flash up around the chimnies and sidewalls with it and it will be water-proof just as sure as you are reading this.

For Water-proof Cellars.

It is better than tar; will last longer No boiling, no heating. Sold prepared and ready for immediate use. It will make a damp or wet cellar as dry as a bone.

For Manufacturers

Having use for a preparation that will make tight joints in wood, glass or metal, they will find SLONE ELECTRIC CEMENT what they are looking for.

SLONE ELECTRIC CEMENT

IS MANUFACTURED AND SOLD IN TWO COLORS

BLACK and RED.

TRY IT AND BE CONVINCED

The experiment will not cost you a great deal.

IT IS PACKED– 24 5-lb Cans in a Case, and in Kegs containing 50 lbs. Net.

Ready for immediate use. PRICES QUOTED ON APPLICATION.

We will send to any address by Express, a 5-lb. Can, on receipt of 35 Cents.

The STASO COMPANY, 8 Hawley St., Boston, Mass.

NEW ORLEANS TRADE.

Within every line of the Hardware trade asserting that the business of the autumn has surpassed that of the Fall of 1902 by at least twenty-five per cent., the local jobbers and wholesale men, as well as the retailers, are jubilant. The greatest rush is now over, and the drummers are in the country placing orders for March and January or February delivery. Generally speaking, iron and steel goods have gone down in price, while the wooden goods have gone up, but the jobbers say that the movement was generally expected and that there was little loss on old stock bought under different conditions.

The marked feature of the general Hardware trade has been the increased shipments of cane crushing machinery and mill supply goods into Cuba and Porto Rico. Several days ago occurred the first considerable shipment of Builders' Hardware into San Juan, Porto Rico. The Central American trade has received added impetus through the recent increased agitation of the canal question. The jobbing trade of the city has also been waging an unceasing war to extend New Orleans business westward into Texas and to the North into territory now regarded as belonging almost entirely to Memphis and St. Louis. The local trade has kept up remarkably well late into the Fall. Builders' Hardware and household goods have maintained a steady ratio of increase.

The banks and the commission men say that liquidations have been better during October and the first week in November than ever before. The clearings in New Orleans for October was $18,000,000 more than for October of 1902, while the clearings of the first week in November were nearly $3,000,000 more than for the corresponding week the previous year. All this, of course, has had its direct effect upon the implement and vehicle trade. The local firms have realized upon their risks, and have been enabled to do safely and very profitably a much larger business than ever before in their history.

Such is the situation briefly. Taken in detail there are certain interesting features which have come up during the past month. Mill supply goods, which promised a greater increase than any other branch of trade, have not maintained an equal pace with implements or with Builders' Hardware. Several things have contributed to this. As the grinding season approached the sugar planters realized that their crop was not so large as had been expected, and that the strain upon their equipment would not be so severe as had been anticipated. Consequently the planters who had expected to place very large orders contented themselves with the smallest amount possible with absolute need. The saw-mill men completed their repairs and improvements for the Fall run earlier than usual, and were too busy and anxious to get back to make as extensive repairs as would otherwise have been made. During the last month many saw mills in Mississippi have been forced to close down by reason of lack of water to fill their boilers. This has been caused by the extensive drought. It is expected, however, that this very cessation of activity will necessitate repairs when work is resumed. In the cotton belt the mill supply trade has kept up to the expectations. The planters have been straining the capacity of their gin houses and making all the demands possible upon the Hardware trade.

The general prosperity of the agricultural districts has caused a large increase in the Builders' Hardware trade. Through Mississippi the smaller towns have been putting up more brick store buildings and using more Builders' Hardware of all kinds than ever before. The decline in the price of the Hardware has added to the demand, while the increased cost of lumber and the consequent competitive cheapening of brick structures has had the same effect.

Ship chandlery, which is chiefly done in New Orleans by Woodward-Wight & Co., has added its share to the twenty-five per cent. increase in business, but has not maintained quite the advance expected. The prolonged strike along the river front, and the consequent cessation of shipping for nearly forty days interfered seriously with the traffic. Just now, however, the harbor is crowded, and the captains seem disposed more than ever to patronize the American terminal of their lines. Several of the English ship agents are interested in New Orleans and are taking steps to place as much of this trade as they can control within the hands of local people.

The local trade has been exceptionally good in every line. The general moving day brought in its wake a demand for stoves and pots, and lids, and fire place utensils, and cooking tools, that has never been equalled in the history of the city. The real estate agents declared that there was more moving than ever before—and the moving van men did the rest. The completion of the two big skyscrapers which have been building during the Summer has removed a constant customer from the local retailers, but it is said that the workmen there employed will locate permanently in New Orleans and will thus make the demand permanent. Several large buildings are under contemplation, and the building circles assert they are looking for no decline in the activity which causes the demand for Builders' Hardware and for workingmen's tools.

After all, however, it has been the implement and vehicle trade which has kept Hardware to the limit this year. The business has increased more than has any other branch of the business. Even in implements, however, there were divisions of prosperity. The drummers are out through the country placing orders with the jobbers in the country towns and the smaller cities, and the implement men are taking a bird's-eye view of the business done during the past few months and the prospects for the coming season. Summarized, the general opinion seems to be that the Fall deliveries of feedstuff, machinery, crushers, grinders, rakes, hay presses, etc., were far in excess of anything in the past; but that the straight implements, such as plows, new land plows, etc., did not very far exceed the sales of 1902 and fell decidedly short of the hoped-for volume of business. This latter feature the optimists trace to a peculiar phase of prosperity, while the pessimists declare that it is inexplicable. The optimists assert the country people were too busy harvesting their various crops to do the usual Fall plowing save where absolutely necessary.

Through the Cotton States there was every prospect for a largely increased sale of plows for Autumn work. This trade, however, maintained itself without much increase. On the other hand, all sorts of feedstuff machinery and implements sold far more freely than ever before. The dealers explain this by saying that the cotton planters have been rather short of labor and have not been able to do more than harvest their cotton and attend to the very large crops of corn and hay, etc., which have distinguished the entire South. Consequently, the local stocks of plows supplied the demand, but the city was heavily drawn upon for presses, crushers, grinders, stackers, shredders, etc.

Further than this, the good price of cotton has caused a general renovation of running gear and stock throughout the South. It is said that more plantation wagons have been sold to the cotton belt for the present season than for any other in years. A great part of this wagon trade is done direct from the Northern agencies, but New Orleans has had more than her share.

The rice people purchased heavily of harvesting machinery last Fall, and are this season making plans for heavy reinforcement of their plowing equipment. While the Louisiana acreage did not increase during the season just now over, that in Texas did. In both Louisiana and in Texas the prospects are for a greatly increased acreage during the season to come. Immigrants are being sought by the Four States Immigration League and by the officials of the Southern Pacific Railroad.

Through the sugar belt the average trade has been maintained. Sales of cane carts and wagons improved over those of last year.

A determined fight is being made by several of the local firms, aided by one or two of the steamship lines to increase the business to Central America and the West Indies. The Morgan Line of the Southern Pacific has been handling some heavy sugar machinery into Cuba and with the heavy machinery a number of large consignments of plows and feedstuff tools. The New York and Porto Rican Steamship Company, plying to San Juan has also done a good deal of this business. The Deere agency made its first sale of cotton plows to Belize, British Honduras, several days ago. A number of Central Americans now in New Orleans have been

Digitized by Google

going the rounds of the local jobbers and agencies looking for implements and vehicles suiting their needs.

The Cuban and Porto Rican trade is said by the shipping people here to be drifting more and more into New Orleans channels—so far as exports to the islands from the United States is concerned. The return cargoes, save in sugar, are going chiefly via the Ward Line to New York. The Southern Pacific has been offering many inducements to local merchants to enter the Cuban and Porto Rican markets with their wares, and the general opinion is that some very heavy shipments of vehicles and implements will go out during the Winter.

A. Baldwin & Co. is making an energetic effort to regain certain portions of Mexico, which were lost to New Orleans during the period of depression a number of years ago. Extra traveling men are now in the field and reports are that good orders are being returned. Into Central America, particularly into Nicaragua, a good deal of local capital is going, and that is expected to improve the demand for local implements and vehicles. It is to be admitted, however, that the export business of the port is not by great odds, what the sanguine persons believe it could be made.

THE STAND-STILLS AND GO-AHEADS.

I have recently had an opportunity to study a score of young men in a single office filling positions on about the same plane, and they resolve themselves readily into two classes—the stand-stills and the go-aheads. The stand-stills have a comparatively easy time of it. Each does his allotted task, has time to discuss the last bowling match, the smallpox scare and to read the morning paper under the edge of his desk when the department chief is busy elsewhere, quit promptly on time and are evidently satisfied to begin again in the morning where they left off the night before, and to see a succession of similar days stretch endlessly before them. The other and the smaller class are restless, eager, unsatisfied, trying to get to the bottom of things and understand the why as well as the how, and stretching forth their hands for new work and more of it that they may fit themselves for a place a little higher up in the ranks.

Talk with the men of both classes and there is not much difference to be noted. The stand-stills have their ambitions, just as the go-aheads have, but they are content to wait for the fruition of their hopes to come to them—some time. The go-aheads, on the contrary, set about making their future and trying to bring about to-day the things they want to come to pass.

There is more fault found with the work of the go-aheads than with that of their slower brothers, for it is they who are entrusted with the different tasks, and those requiring pluck and independent thought; and they have as a part of their reward the knowledge that they are the ones to whom hard work can be entrusted, and that each achievement makes them the better able to do still greater things.

A short time ago I was favored with a chance to study the history of a large manufacturing concern, and I found there, in the same sharp contrast, the stand-stills and the go-aheads in charge of rival institutions. I learned how one little go-ahead concern thrived and grew against the active opposition of its larger competitors, and how it rapidly outstripped them and is to-day the only one left of all the number that were in the race four decades ago, and with the same aggressive, and progressive spirit considers what most men would be glad to call a finished work, as the mere foundation for a tremendous growth to come.

A yesterday foretells a to-morrow, and in the history of the past we may read the history of the future. I have no doubt that through some of the go-aheads I have recently seen there will arise big enterprises, and that the time will come when the same stand-stills will be working under these go-aheads and wondering why.

It pays a young man to push ahead—and push *hard*. Even if there seems no opening ahead of him, if he will demonstrate his fitness for better things the chances are more than even that those above him will make an opening for him. Very often the heads of houses and leaders in their policy have plans they cannot put into execution for lack of the proper man to carry them out. It is the head of the progressive house who needs men faster than they present themselves, and will sooner or later give every worthy applicant for advancement a chance to show his worth.

If you will look carefully at the men about you who are forging ahead of their associates, you will find that the main difference is just the ardent desire to get ahead. One man will hesitate to attempt something untried while another no better fitted will step forward and achieve a triumph. The man who didn't dare can point out the mistakes and show how much better it could have been done and tell what a dreadful mistake it was to let that particular man do the work, but it has been done and the doer has forged ahead by just the measure of his deed. He is ready for another task, and if it presents the same problems as his old it will be better done. If it is entirely new and untried, there will doubtless be new blunders for stand-still to point out and exclaim over, but the mark will have been set still a little further ahead.

Has it ever occurred to you when you go to the man ahead of you for orders and advice that the problems you are asking him to solve are just as new to him as they are to you, and that if you only thought so you could work them out yourself instead of troubling him and earn his gratitude and confidence. I will warrant if you go to him half a dozen times in a day about the petty details of some work he has entrusted to you that when he sums up the day's work and its cares and annoyances he will count as one of his chief troubles the frittering away of his energy over unworthy trifles you and others have thrust upon him. He, himself, is a go-ahead, and of all the maddening, worrying, hindering things such a man has to deal with is the employe who has to be pushed from step to step in his work, unable or unwilling to grasp the general idea of a plan of action and use his own judgment and common sense for the determining of methods.

The greatest moving force in the forming of character and careers is—habit. There is such a thing as a habit of assuming responsibility, by which a man comes to look upon any new endeavor or untried plan as his legitimate work, and to seek it; to work out new ideas and plans and propose them, that he may have something in his "line" to do, and to enthusiastically further projects that may be entrusted to him. If his judgment is good, he will succeed in large measure. If it is not he will come to grief early in his career, and it is then time enough for him to fall back into the ranks of the stand-stills. But it is much better for him to essay great things and fail than never to have tried at all.

We hear it said that every walk of life is overcrowded and that the young man of to-day has no show. The very opposite is true. There never were so many and such glowing opportunities for success, nor could men rise as high. It is a great thing to have ability. It is equally important to have the go-ahead faculty that will ensure a fair chance to that ability. Better plenty of push and a fair ability than more ability and a lack of ambition to make it manifest.

THE MAN IN THE CORNER, in *The Corbin*.

GOLF BALLS OF TO-DAY.

The shipment of a Chinese idol from Singapore to St. Andrew's, in Scotland, was the means of the discovery of the gutta-percha ball now exclusively used in golf. Dr. Robert A. Patterson, of Pittsburg, Pa., was the original discoverer. He was fourteen years of age when he made the first gutta-percha golf ball.

At that time the pigskin ball was used exclusively in playing the game. The balls were stuffed with feathers. They sold for 75 cents each, and Dr. Patterson could not afford to pay for a ball, so the thought struck him to make one from the material which had been transported from China in the packing of the idol. The gutta percha was soaked in warm water, and then was put through a rolling process by hand. The ball was painted and a test made, but the ball would not hold the white paint.

Not satisfied with his success, he told his brother about it and complained that he could not successfully paint the ball. The brother grew interested, made some balls and put in a composition that made the ball take the paint. It was then placed on the market by the brother. The doctor, who was then fourteen years old, resumed his studies at St. Andrew's

Digitized by Google

University, little dreaming that in after years one firm alone would make nine million gutta-percha balls in a single year. After his brother's experiment in the manufacture he took the ball and showed it to Allan Robinson, of St. Andrew's, a manufacturer of the pigskin article.

The introduction of the ball was the beginning of the play of Robinson and "Tom" Morris, both of whom were champion golf players at that time, a title which "Tom" Morris still carries, although eighty-two years old. Morris, who is known by no other name than "Tom," was an apprentice of Robinson. To-day he is a manufacturer of the gutta-percha ball and keeper of St. Andrew's links. The St. Andrew's club is the dominant golf club of the world, making rules by which all other golf clubs play.

When Robinson learned that "Tom" Morris had played with a gutta-percha ball on the St. Andrew's links, and played successfully, he told "Tom" that if he played with the ball again he need never cross his door. It was the beginning of the end of their association. Robinson continued making his pigskin ball and Morris manufactured the gutta-percha ball.

On the introduction of the gutta-percha ball Robinson bought up all he could get hold of, and burned or otherwise destroyed them, but after fighting the gutta-percha article for several years was compelled to introduce them himself. No one ever thought of patenting the ball, and anybody made it. In 1859 Robinson died, it is said, of a broken heart, but Morris is still living and is known to all golf players the world over. Since that time no other character of ball has been used for playing the game.

Dr. Patterson is seventy-two years old, but is not in good health. For a number of years he was president of the ladies' college, Binghamton, N. Y. In his boyhood days he was caddie for George F. Carnegie, said to be an uncle of Andrew Carnegie.—Washington (D. C.), *Star*.

HOW BASEBALLS ARE MADE.

Baseballs are only used during the Spring and Summer, but all through the year they are made. One plant has a monopoly in the manufacture of the best balls—the $1.50 official sort—and this plant employs, year in and year out, 1250 hands, and it makes, year in and year out, 1200 dozen balls a day. Thus its annual output is close upon 5,000,000 baseballs a year.

Suppore the Spring is here. The players of the national game are limbering up. The millions of new baseballs that have been accumulating since last Fall are beginning to be sold. A description of the making of all those balls ought to be interesting—a glimpse at the inside of the big, five-story red brick baseball factory, with its 1250 young men, young girls and boys at work.

The first room in the factory is the winding room. This room is as big as a concert hall, and, running up and down it in straight lines are machines, each about the size of a child. Before each machine a boy sits. He has on his right and on his left a wooden shelf. Upon the right-hand shelf are balls of the purest Para rubber one inch in diameter, and he takes up these balls, one at a time and puts them into the machine.

The machine winds about them more regularly than hands could do a very strong and pure quality of woolen yarn of a bluish hue. This yarn is of the thickness that is called fourply; it is about as thick, that is, as straw. After enough of it has been wound about the Para rubber centre to make a ball two inches in diameter, the machine stops of its own accord, and the boy removes the little ball and places it on the shelf upon his left. Then he puts in the machine another Para rubber centrepiece and the instrument begins again to wind its woolen yarn about the rubber. This boy and this machine make, between them, little balls, half rubber and half yarn, two inches in diameter. That is their whole duty. Fifty boys and 50 machines do this work with a clocklike regularity in the big room.

There are a half-dozen smaller boys who go to and fro with baskets, gathering up the two-inch balls as they are finished. These boys take them to a young man over in one corner, a young man called a "dipper." The dipper stands beside a vat, the size of a bathtub, that is filled with a fluid as thin and colorless as water—a fluid that resembles water precisely. In this vat he dips the balls, and then stands them aside for a little while to dry. The weak-looking fluid is in reality a very powerful plastic composition, or liquid cement, and it is this composition which insures to the balls a permanent roundness, which prevents them from ever being (as the phrase) battered out of shape.

The balls now go to 50 other boys at 50 other machines. These machines are like the first ones, only they are differently regulated. They wind upon the balls a second inch of a finer woolen yarn—first a three-ply blue and then after a second drying, they are ready to be covered.

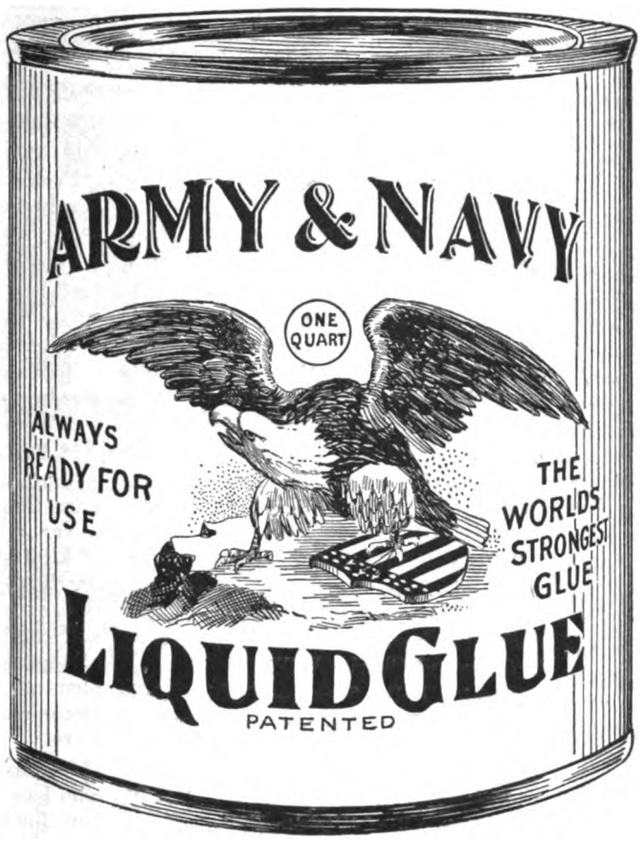
Their covers are made of an alum-three-ply white yarn—and the balls are dipped again in the strong cement, and, tanned horsehide that is as soft and white as the gloves men wear at night with their evening clothes. This hide is nearly one-eighth of an inch thick. One horse supplies only 18 ball covers, for only the strongest and best portions of each hide are used. As the hide comes to the factory from the tanner's, it is knee-staked. To knee-stake a hide is to get all the stretch, all the elasticity, out of it. A robust young man lays is across the upright plank, or stake, that is knee high, and he draws it back and forth; he bears down on it as hard as he can; he stretches it to its utmost limit. Were hides not knee-staked in this way, the covers made from them would become loose and wrinkled after they were sewed upon the balls.

The machines that cut out the covers are huge. They are 10 feet in height, and the massive-looking ironwork in them weighs many tons. Each machine has a man seated before it, and each with two strokes, cuts out the two covers of a ball and at the same time perforates the covers' edges. Each cover is in the shape of a figure 8. The machines cut out these figures as a woman with a tumbler or with any sharp-edged circular instrument, cuts cookies out of sheets of dough. A sharp 8-shaped iron punch descends upon the white horsehide, and bites out of it in the half covers. The edges of the punch have little needles set close together in them. It is these needles, piercing the cover, that make the perforations for the stitches.

The balls are stitched by men, for women are not strong enough for this work. The thread used is cotton, for neither silk nor linen thread will serve for baseball sewing. This is because the alum used in the tanning of the covers would rot silk, and because batting would break the fibre of linen. Thus balls sewed with silk or linen would be ripped apart ere three or four innings were played.

The men sit on saddles, astride, and two wooden arms hold the balls firm before them. They fit on a pair of covers, pull them tight with tweezers, clamp them together with staples, and then sew them, with very strong thread of red or blue, through the perforations made in their edges by the machines.

After the sewing a ball's seams are rough. Therefore it is rolled first by hand and afterwards by machinery. The hand-rolling lasts an hour. Then into a machine goes the ball, and round and round it rolls, in a circle five feet in diameter, till it has traversed six or seven miles. It emerges thence quite smooth—a perfect ball now, ready to be stamped, packed and put upon the market.



It takes, in the factory, 30 minutes to make one $1.50 baseball, from its winding clean through to its packing. Each ball is five ounces in weight, nine inches in circumference, and three inches in diameter. The various machines keep those dimensions regular, and an additional precaution toward regularity lies in the many sets of scales that stand in every room of the big factory. Each ball, in each stage of its making, is weighed. Each ball goes through no less than five weighings before it is done.

The average professional team puts from four to six new baseballs in play in the course og a game. The average ama- baseballs in play in the course of a game. The average ama- team puts in play one ball, and stops the game if that gets lost. A St. Louis team holds the record for the number of new balls used in one game. That number was 17. The year wherein the record was made was 1898.

Of the millions of baseballs that are made, none are used by foreigners. Baseball is an American game, and none but Americans play it. In small quantities, however, balls are exported. They go to Cuba, to the Philippines, and, during the Boxer uprising, they went to China. For, wherever Americans are, ball must be played, and wherever American soldiers and sailors are, baseballs must be shipped.

The baseball factory is in Philadelphia. "Al" Reach, a noted old-time player, conducts it.

HARDWARE DEALERS' RECORD.

Hardware dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Stores, Incorporations, Etc.

Cumberland, W. Va.—A new company will be incorporated under the name of the Union Hardware & Supply Company. The capital stock will be $5,000 with the privilege of increasing to $25,000. The application for a charter has been made, and the stockholders are F. W. Stewart, Daniel McDonald, Jas. Luke, N. W. Ballantyne and others. They will handle a full line of Hardware and brick yard supplies, besides a line of farmers and builders' Hardware.

Mansfield, Ohio.—Beaver Bros. have opened a new store and will carry a line of stoves and Hardware.

Danville, Va.—A new Hardware has been opened under the firm name of the Farmers Hardware Company, on Union Street. Their stock consists of farming implements, stoves, heaters, paints, glass and Hardware miscellany.

Massillon, Ohio.—The Hemperly Hardware Company has been incorporated by Daniel Hemperly, Frank L., Emma G., Emma K., and W. E. N. Hemperly, $15,000.

Meridian, Miss.—Frank Smith Hardware Co. has been incorporated, with capital of $25,000, by F. E. Smith, J. C. Pritchett and G. Sharer.

Milford, Iowa.—S. O. Pillsbury has opened a Hardware store.

Monrovia, Cal.—Allen Nye will open a Hardware store in the Spence Block.

Moundsville, W. Va.—Edward Rogerson is opening up a Hardware store.

Munhall, Pa.—The McLamphy Furniture & Hardware Co. has been incorporated. Capital stock $20,000.

New York, N. Y.—The J. Gordon Smith Company, with a capital of $15,000, has been incorporated to deal in Hardware. The directors are: J. Gordon Smith, of the Borough of Queens; Thomas Burke, of Brooklyn, and Albert Wilkins, of Morris Park, and Benj. B. V. Towt, of Brooklyn.

Palmyra, Pa.—Bressler & Company, of which C. O. Bressler of Lebanon, is a member has opened a new Hardware store on Main Street.

Palmyra, Pa.—Wallace Altenderfer of Philadelphia, has opened a Hardware store in the middle room of the Greiner Building, Main and Railroad Streets. Mr. Altenderfer was engaged in the store of George Krause & Co., Lebanon, for a number of years and has had an extensive experience in the Hardware trade.

San Francisco, Cal.—Mangrum & Otter has been incorporated. Capital stock $100,000. The incorporators are as follows: A. S. Mangrum, H. W. Otter, F. S. Campbell, N. B. Herndon, W. D. Winslow and C. L. Snyder. All but the last named are appointed directors for the first year.

Seymour, Texas.—The Seymour Commercial Company was organized with a capital stock of $20,000. A charter has been applied for and as soon as it is granted the new company will purchase and consolidate the Hardware, implement and furniture stocks of Perry & Smith and O. D. Goostree, and begin business.

Springfield, Mass.—H. Boynton has opened a new store and will keep a general stock of Hardware.

Stillwater, Okla.—The Willis Hardware and Improvement Company has been incorporated with $10,000 capital stock. The incorporators are: J. T. Gray, E. Gray and Charles Willis.

Wichita Falls, Texas.—Wichita Falls Implement Company has been incorporated; capital stock $20,000. Purpose, general merchandise. Incorporators: W. A. McCutchen, G. H. Jackson and J. W. Henderson, all of Wichita Falls.

Changes.

Atlanta, Ga.—A. B. Ware has bought an interest in the King Hardware Company's business, and has been made a director in that company.

Bowling Green, O.—J. H. Folk and C. L. Hopper have bought the Hardware business of Avery, Folk & Company, and will take possession Jan. 1st, 1904.

Casey, Ill.—Isaac Price and his son Don Price have opened up a Hardware store on Main Street.

Clio, Mich.—Sperry Bros. of Port Huron, who last week bought the bankrupt Hardware stock of the W. A. Smith Company at Clio, opened up for business on Saturday morning.

Erie, N. Y.—The Hardware business formerly conducted by Nice & Hinkey has been sold to Edward Davis of Hornellsville.

Jacksonville, Ill.—John Woelfel and Carl Gundlach have purchased the Implement and Hardware business formerly conducted by Oscar M. Kiest.

Marshall, Mich.—The firm of Leedle Bros., Hardware merchants, has been dissolved, A. E. Leedle retiring. The business will be conducted at the old stand by C. W. Leedle.

Mt. Gilead, O.—After Jan. 1st Mell B. Tallmage will retire from the Hardware business. His successors will be Samuel W. Wilson and William D. Matthews.

New Britain, Conn.—The New Britain Hardware Company has changed the firm name to the Barnes Hardware Company.

New Haven, Conn.—The business of the Mallet Hardware Company has been sold to the John E. Bassett Company.

Packwood, Iowa.—The Packwood Hardware Company has been sold to a party in Mt. Pleasant, Iowa.

Petersburg, Va.—W. P. Aldridge, dealer in bicycles has made an assignment for the benefit of his creditors. Assets and liabilities were not given.

Portland, Ore.—The name of the Pier Hardware Company has been changed to the Muck-Dunning Hardware Co.

Pullman, Wash.—H. J. Welty has bought the stock of the Devenish Hardware Company from I. B. Merrill, receiver in bankruptcy, for a consideration of $10,100, and the store is to be reopened. The purchase was made by Mr. Welty for a stock company of local men who will conduct the business in the future at the old stand, but will drop the implement, tinware and plumbing departments and conduct a straight Hardware store.

Savannah, N. Y.—E. H. Farrand, who has been in the Hardware business here for the last eight years, has sold out to Mr. McMullen of Newark.

Savannah, Mo.—The Hardware firm of Bales & Cummins has dissolved partnership, Mr. Cummins having traded his interest to Dillon Bales. The style of firm is now Bales & Son.

Sioux City, Iowa.—The Lininger & Metcalf Company, of Omaha, jobbers of farm implements, have decided to open a branch house in Sioux City, and C. P. Bogan will be local manager. The company will occupy the buildings at 309 and 311 Pearl Street and will start with three traveling men on the road. It expects to be ready for business about November 15.

Springfield, Ky.—T. Dudley Wells and James McClure have purchased the implement and Hardware business of Messrs. Thompson & Green and will take possession of their new business at once.

Sullivan, Ind.—A. D. and Walter G. Scott have purchased the Sullivan Mercantile Company, one of the largest Hardware firms in Sullivan. The business has been operated by a stock company for about a year. A. D. Scott was formerly a citizen of Terre Haute.

Syracuse, N. Y.—Gordy & Kitson have opened their Hardware store in their new room on Huntington Street.

Traverse City, Mich.—S. F. Saxton has purchased the Hardware store of S. K. Northam, for many years managed by A. H. Perry. Frederick Saxton will assume the active management of the business.

Waterford, Wis.—J. H. Quinn has sold his Hardware store and agricultural implement business to Chas. Butke, of Caldwell, who took possession Oct. 26.

HARDWARE MANUFACTURERS' RECORD.

Hardware manufacturers over the country, are requested to contribute to this page. News of new factories or companies, changes, improvements, etc., will be gladly received, and promptly published.

New Incorporations, etc.

Butler, Pa.—The Iceless Refrigerator Company has just been organized here with a capital stock of $40,000. The officers are: President, John Younkins; Vice President, William C. Thompson; Secretary, J. M. Wetherall; Treasurer, J. C. Hoch; Directors, Alford Klein, J. F. Anderson, Thomas J. Shuffin, Louis Eick, D. Harper Sutton, Dr. M. E. Headland and A. E. Lyda. They will manufacture a refrigerator invented by Mr. Wetherall.

Chicago, Ill.—Marinette Gas Engine Company has been incorporated; capital, $250,000; manufacturing machinery and tools; incorporators, E. D. Fraser, H. S. Keeler, George Barry.

Cincinnati, O.—The Anderson Manufacturing Company has been incorporated to manufacture nuts and bolts; capital stock $100,000. Incorporators, L. C. Anderson, H. T. Anderson, Henry Van Matre, G. K. Moore and Morgan Van Matre.

Davenport, Iowa.—The Schmidt-Russell Manufacturing Company has been incorporated to manufacture a refrigerating machine of the ammonia compressor sort.

Detroit, Mich.—The Ericsson-Moore Manufacturing Co., makers of dies, tools and sheet metal goods has been incorporated. Capital stock, $5,000. The stockholders are Albert N. Ericsson, William Moore and David M. Ireland.

Detroit, Mich.—The National Twist Drill & Tool Company, capital $20,000, has been organized to manufacture twist drills, chucks, etc., in the factory which was formerly occupied by the Detroit Twist Drill Company, corner of Twenty-first and Standish Streets. W. H. McGregor is president; C. R. Becker, secretary and A. W. Ehrman, treasurer.

Dunkirk, N. Y.—Lake City Stove Company has been incorporated. Capital $15,000. Directors, P. F. Meister, S. T. Colman and P. R. Bradley of Dunkirk.

Egg Harbor City, N. J.—The Fisher Wrench Company has been incorporated. Capital stock, $100,000. Corporators—Richard Carter, Egg Harbor City; Ernest W. J. Thelenberg, Overbrook, Pa.; Harry L. Dunn, Philadelphia; Ebenezer Fisher, Egg Harbor City; John Ewing, Philadelphia.

Greensboro, N. C.—The Carolina Spoke & Handle Company has been incorporated with a total authorized capital stock of $100,000, of which $20,000 is subscribed by W. L. Clement, J. G. Foushee, Jr., and John H. Whitt, of Greensboro.

Moline, Ill.—The Nebraska-Moline Plow Company has been incorporated. The capital stock is $100,000.

New York, N. Y.—Yale & Towne, Limited, has been incorporated to manufacture Hardware; capital $10,000. Directors—H. R. Towne, J. H. Towne, New York; Schuyler Merritt, Stamford, Conn.

Portland, Me.—The Fullum Hydro-Carbon Heating Company has been organized to deal in heating apparatus; capital stock $5,000. Promoters, James F. Fullum, president; John H. Hayward, treasurer, Everett, Mass.; John C. Gastorf, Boston.

Springfield, O.—The All-Bright Lamp Company has been incorporated; capital, $25,000; by M. L. Milligan, E. S. Albin, Pearl Young, John G. Brickinridge, C. K. Hullinger.

Taunton, Mass.—The purchasers of the No. 3 mill of the Atlas Tack Company have voted to incorporate under the Massachusetts laws for $100,000, as the United Tack Company, and to purchase the No. 1 mill, which is the better equipped for the business which the new company proposes to carry on. The officers and directors elected were: President, Dr. F. A. Hubbard; secretary and treasurer, Luther Dean; directors, Dr. F. A. Hubbard, Clinton V. Saunders, Fred S. Hall, Dr. B. L. Dwinell and Luther Dean. The superintendent will be J. M. Fraga, a Pennsylvania man with twenty-six years' experience in the tack and nail business. Active operations will begin at once and all grades of tacks will be made. The company has purchased the good will and order of the Norway Tack Company of Norristown, Pa., and in that way has secured a large number of orders.

Toledo, O.—The Caldwell Bit & Augur Company has been incorporated. Capital $100,000.

Vermillion, O.—The Howard Stove & Manufacturing Company, Missouri, capital stock $115,000, has been incorporated in Ohio.

Allentown, Pa.—Roberts, Winner & Co., of the Quakertown Stove Works, have recently purchased the property formerly owned by E. R. Artman, of the Real Estate Title, Insurance and Trust Company, of Philadelphia. The object of the purchase is the removal and the enlargement of the stove works.

Averyville, Ill.—The Kingman Plow Company has increased its capital stock from $400,000 to $600,000.

Cadillac, Mich.—The Cadillac Handle Co. has increased its capital from $20,000 to $65,000.

Chicago, Ill.—C. R. Stephens, superintendent of the Moline Plow Co., has purchased the controlling interest in the Acme Steel Co., of Chicago, recently owned by S. T. Gunderson and son, Chicago, Messrs. Sawyer, of Carpentersville and Sawyer of Elgin and Sellick of Chicago.

Fulton, Ill.—The plant of the Mississippi Valley Stove Works was sold at auction for $24,500 to the Charleston (Ill.) Foundry Co. This amount was less than two-thirds of the appraised value. The assets included about 1,000 stoves, 300 tons of pig iron and other material.

Grand Rapids, Mich.—Millard E. Stockwell, Florence E. C. McKee and S. Wallace McKee, the directors and stockholders of the Grand Rapids Clamp and Tool Company, have sold all the property of the said company at private sale to the Furniture City Vise Company, Ltd., and have ceased business.

Hartford, Conn.—The Hartford Machine Screw Company will build an addition to its factory. The building to be added to is about 130x30 feet in dimensions and the extra space acquired by the company will be used to enlarge its polishing and plating departments.

Lewistown, Pa.—The Mann Edge Tool Company, of this city, has obtained an option on the large works of the Axe Trust, at Mill Hall, Pa., and will on January 1 buy the latter. The Mann works here will continue business.

Menominee, Wis.—The Hubbard Saw & Tool Works on Dunlap Avenue, which manufactured saws and tools for the mills of the twin cities and vicinity, has been sold to F. G. Fernstrum, boiler manufacturer. Mr. Fernstrum in turn sold the machinery to Andrew Gram, machinist, but will retain the real estate for future use. The Hubbard Saw & Tool Works operated in Menominee for over ten years. Alonzo A. Dunning as president, John W. Martin, vice-president, and Frank L. Dunning as secretary and treasurer.

Parkersburg, W. Va.—The plant of the Parkersburg Wire and Nail Manufacturing Company was sold at auction by Levin Smith, trustee, and purchased by C. C. Wentz for $5,600. The plant includes fifteen building lots, constituting the manufacturing site, the building, fixtures of uncertain value, and such stock as was on hand when the plant shut down. It cost, originally, in the neighborhood of $30,000.

Trade Notes

Ashland, Ohio.—At a recent meeting C. W. Landis, Allen Thomas and F. R. Marks were elected stockholders in the Ashland Steel Range & Manufacturing Company to fill the vacancies made by the retirement of Dr. F. V. Dotterweich and the Ott brothers.

Dixon, Ill.—At a recent meeting of the Grand Detour Co. the following directors were elected for the ensuing year by unanimous vote of stockholders present: O. B. Dodge, C. H. Noble, L. D. Dement, Amos Bosworth and F. O. Coleman. The directors at once re-elected the old officers, being O. B. Dodge, president; C. H. Noble, vice-president; Amos Bosworth, assistant secretary; F. O. Coleman, treasurer.

Lockport, N. Y.—The Lamb Manufacturing Company, of Sioux City, Ia., will locate in Lockport. The company is capitalized at $150,000, and manufactures a patented self-heating sad iron.

Reading, Pa.—A meeting of the directors of the Consolidated Hardware Company was held in their new office in the Colonial Trust Company's building. The following directors, elected by stockholders last week, were present: Mattham Harbster, Wm. M. Griscom, Richmond L. Jones, John G. Mohn, Howard L. Boas, Isaac G. Treat, Albert A. Gery, John E. Harbster and George H. B. Martin. After the organization was completed these officers were elected: President, Albert A. Gery; vice-president, John E. Harbster; treasurer, John G. Mohn; secretary, J. Milton Miller. All the bonds of the new corporation have been distributed and the stock taken. The bonds and stock are held by about 20 people. The company is capitalized at $2,500,000. The Consolidated constitutes the Reading and the Keystone Hardware Companies.

Wilkesbarre, Pa.—At a meeting of the stockholders of the Sheldon Axle Works recently the old board of directors was re-elected as follows: President, E. H. Jones; vice-president, Thomas H. Atherton; secretary and treasurer, Charles H. Gillman. Following is the board of directors: E. H. Jones, George S. Bennett, Maurice Gaertner, Andrew F. Derr, Isaac M. Thomas, T. H. Atherton and J. W. Hollenback.

BICYCLE AND SPORTING GOODS RECORD.

Bicycle manufacturers and dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Stores, Incorporations, Etc.

Addison, N. Y.—The Reliance Motor Cycle Co. has been incorporated. Capital stock $15,000. Incorporators: Willis H. Ives and Charles D. Reynolds, of Addison and J. Frederick Dell, of Buffalo, New York.

Marquette, Mich. — The Houghton Gun Club has been organized at a recent meeting held at the Portage Lake Hardware Company's store.

North Scituate, Mass.—A new repair shop has recently been opened by F. T. Bailey.

St. Louis, Mo.—Hunting in the Ozarks Company has been incorporated, H. A. Diamont, Albert Frech, John E. Bishop, incorporators. To sell sporting goods and operate shooting gallery, etc., at the Louisiana Purchase Exposition; capital stock, full paid, $10,000.

Changes.

Columbus, Ohio.—Wickoff, Funk & Co. have purchased the bicycle and sporting goods department of the business conducted by Oscar S. Lear.

Geneva, Ohio.—Ray Rich, formerly employed at the automobile shop here, has purchased the bicycle repair shop which has been operated heretofore by Hugh Payne on East Main Street.

Kewanau, Ill.—Scott & Sweet have been succeeded in business by S. L. Stebbens & Company.

Lawrence, Mass.—A. H. Higgins succeeds to the business formerly conducted by Edward Mosher.

Middletown, Conn.—Caulkins & Post Co. have closed out their business.

Sterling, Ill.—John Peck has decided to continue in business and will immediately erect a temporary building for the making of gun stocks, either on the site of the old building or near the saw mill west of the Dillon-Griswold wire mill. The temporary building will be seventy by thirty feet in dimensions and one story high. It is expected that in about two weeks Mr. Peck will again be making gun stocks and will be able to fill all of his contracts. This building will be erected only for the winter, and next spring Mr. Peck will build a large and modern building of brick about three times the size of the plant that was destroyed by fire.

St. Louis, Mo.—South Side Cycle Co. has removed to 2411 South Broadway.
burg bought out E. R. Pease.

Toledo, Ohio.—The Snell Cycle Fitting Company is preparing to establish a new manufacturing feature of its big plant in this city. The company will engage extensively in the building of motor cycles, and expects to get the enterprise started in time to list it in the catalogue for the coming year's trade. Mr. J. R. B. Ransom, an officer of the company stated that they had been fortunate in securing the California motor cycle, manufactured at San Francisco during the past three years. Along with the good will and patents the company has secured the services of a mechanic skilled in the work of building these motor cycles and it is expected that the first product of the new department will be turned out some time in December.

Turners Falls, Mass.—C. S. Gove has removed his business to larger quarters.

Waltham, Mass.—A. L. Hill has discontinued business.

West Medford, Mass. — Wetherbee Bros. of Arlington, have purchased the stock of F. H. Gleany.

Whitney's Point, N. Y.—S. Rittenburg bought out T. R. Pease.

Embarrassments.

Boston, Mass.—Appraisement of the assets of the E. P. Blake Company, it is understood, will fix the value at about $10,000. Blake's schedule placed the value at $19,605, the liabilities being $34,000. It is likely that an offer of 30 per cent. will be made to the creditors, which, if not accepted, will result in the sale of the business.

Brockton, Mass.—The offer of the Motor Cycle Company, which is in the hands of a receiver, has been approved by the creditors. The plan is to reorganize and give creditors 7 per cent. preferred stock in payment of their claims.

Chicopee, Mass.—Ernest E. Pelky, bicycle dealer, has filed a petition in bankruptcy. His liabilities are $3.887, including $2,500 due L. H. and Angeline Thurston, of Barre, Vt., who are secured by a mortgage on real estate in Chicopee. The assets, aside from this real estate, consist of personal property valued at about $550.

Columbus, Ohio.—A receiver has been appointed for the Young Repeating Arms Company, in the person of Paul Jones, whose bond has been fixed at $20,000. The appointment was made by Judge Marcus G. Evans, upon the application of Charles A. Young, who owns 1,695 shares of the stock. The company was incorporated under the laws of New Jersey with a capital stock of $60,000 and has been in operation since January 1, 1902, and has about $4,000 worth of finished arms at the factory, besides a number in process of manufacture. The working force numbered thirty men, whose threats to bring suit to collect money due them, precipitated the receivership. In his petition, Mr. Young says that the total indebtedness of the company is $25,000. There is due the workmen $3,000 and the plaintiff $5,285, while there is less than $200 cash in the bank. In an interview, President R. S. Rhoads said that a meeting of the directors would be held for the purpose of reorganizing and placing the company on a firm basis. He said the action was taken to protect the creditors.

Miscellaneous.

Hartford, Conn.—The price list of the Pope Manufacturing Company, issued recently, shows some interesting changes in the retail figures on well known lines, and the changes are all in the nature of advances. Most notable is a uniform advance of $10 all along the line on Columbia chain wheels. The Columbia chainless has been advanced $5, that is, from $70 to $75. The accessories that go to make up the increasingly popular mode with "all modern improvements" remains the same in price. The cost of the improvements total up so that a Columbia 1904 chainless with all the up-to-date features will cost just $100. This is figured out thus: Columbia two-speed chainless, with coaster brake, $90; cushion frame, $5, cushion forks, $5. The coaster brake on any wheel costs $5 extra; the two-speed, which necessarily includes the coaster brake, costs $15 extra, and as the two-speed mechanism is not an attachment that can be put on any old wheels, but constitutes a model of itself, thus makes a regular $90 model. Other changes are the addition of a $30 "Stormer" model and a new racing wheel at $60 to the Tribune line. The $50 model of this year is now a "light roadster" at the same price. The $40 models of the Tribune and Cleveland line are retained. The Hartford and Westfield lines and prices both remain unchanged.

Ilion, N. Y.—H. E. Van Alstine has been granted, through Milton E. Robinson, the patent attorney of this city, a patent for an automatic reel. The particular feature of the reel is the device for throwing off the brake, by means of which a constant tension on the line is secured. The Martin Automatic Fishing Company of Ilion has taken up the patent and will engage in its manufacture.

Marietta, O.—The Marietta Sporting Goods & Machinery Co. has made an assignment for the benefit of their creditors. The assets of the company are $7,000, and the liabilities will probably reach $5,000.

Middletown, Ohio.—The $50,000 damage suit brought by Oscar Selbach against the Miami Cycle and Manufacturing Company, was dismissed recently by the Common Pleas Court at Hamilton, Ohio.

PRICES CURRENT.

The prices noted in this Prices Current are intended for the Hardware trade only, and for such quantities as are usually purchased by retail dealers. They are carefully revised and represent quotations at which purchases can be made. Very small quantities, and broken packages, frequently make higher prices necessary.

Subscribers are requested to notify us of any discrepancies, as we desire to make this department of our paper worthy of their constant attention.

The list prices, from which discounts are given, will always be furnished the dealer upon request, by the manufacturer quoted.

ASBESTOS SAD IRONS

REPRESENT the highest type of Sad Irons on the market. It is the only complete line comprising every kind of iron required for family use.

The Laundry, Polishing and Pressing Irons are so made that one hood or cover does for all, enabling the owner of one iron to procure the others at trifling cost, by purchasing only the required cores.

We shall continue advertising

ASBESTOS SAD IRONS

extensively in publications read by women.

They are no longer an experiment and are everywhere recognized as the irons of the future.

If you care to stock a line of Sad Irons, complete in every possible requirement, which bring more money, and afford a better profit than others, write us or your jobber for prices on the complete line.

A New Trade Winner.

Horton Galvanized Rotary Washer No. 9.

Made of steel throughout, doubly seamed and heavily galvanized after constructed, making leakage an impossibility.

We also manufacture the following well known Washing Machines, catalog of which will be mailed promptly upon receipt of request.

Carried in stock by all leading jobbers.

Western	(Square)	Made in two sizes.
American	(Round)	" " one size.
Western Rotary	(Square)	" " two sizes.
Horton Rotary	(Round)	" " one size.
Globe	(Double Rubber)	" " three sizes.

If your jobber does not handle them write us for prices.

A 20TH CENTURY CATALOGUE

One or two turns unlocks the binder

A loose leaf system by which every dealer can keep up to date . . .

The only practical system for progressive Hardware dealers

Pages can be easily inserted or removed.

New Pages are furnished at frequent intervals Illustrating New Goods or supplying changes in list.

"We are just in receipt of the second lot of sheets to be inserted in your catalogue, and the more we see of your system the better we are pleased with it. I have inserted the leaves in their proper places in less than ten minutes, which brings our catalogue up to date. It is the slickest device that I have ever seen and it is a wonder to me that more houses do not pattern after your system. I beg to congratulate you on the idea which you have discovered and inaugurated."

"Your catalogue is fine, especially the price list part. It is to the Hardware man what the Bible is to the Christian, or the Log Book to the Sailor."

"This is the first time that we ever had a Hardware catalogue that enables us to show a customer anything he may call for and be able to make him a satisfactory answer when he asks the price of an article, upon which the dealer is not posted. We appreciate the advantage offered by this system, which enables every dealer who buys Hardware from H. S. B. & Co. to know about 'where he is at.'"

We have received thousands of similar letters from dealers testifying to the value of our Catalogues;

Not for sale at any price but furnished free of charge to legitimate dealers with their first shipment of goods.

HIBBARD, SPENCER, BARTLETT & CO.

H. & R. Single Gun AUTOMATIC AND NON- Ejecting.

12 & 16 GAUGE
Steel and Twist Barrels

20 GAUGE,
Steel Barrel.

Simplest "Take Down" Gun Made.

Superior in Design, Workmanship and Finish, and the Most Popular Gun on the Market.

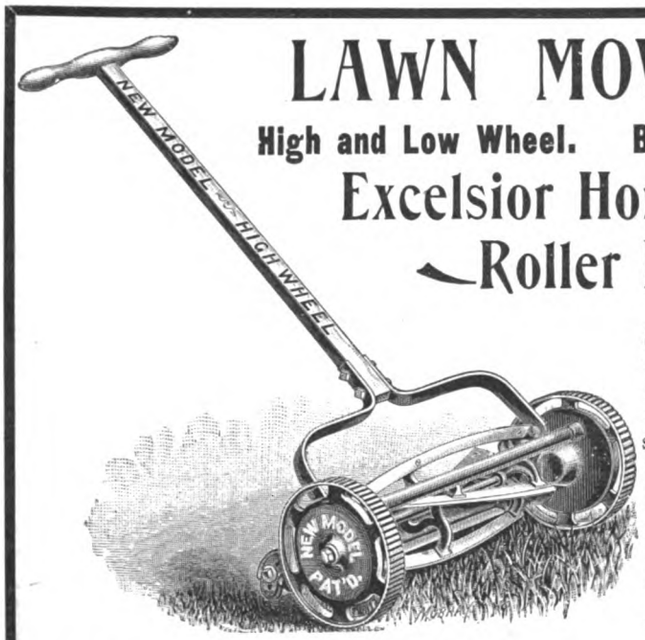
HARRINGTON & RICHARDSON ARMS CO.,
Also makers of H. & R. Revolvers.
Catalog on Request. WORCESTER, MASS.

Every Day

is a "dull day" for the average household knife. That's why the Rose Automatic Grinder is *never out of season*. Only set it where it can be seen and tried by your customers, and it will earn more profit to the square inch of space occupied than anything in stock.

The ROSE Automatic Grinder

is a practical novelty. It is simple, durable and efficient. Drawing a knife through the slots as shown, brings it in contact with a *revolving* emery wheel, that sharpens it and does it right. Set one on your counter and see it sell itself.



Of your jobber or write

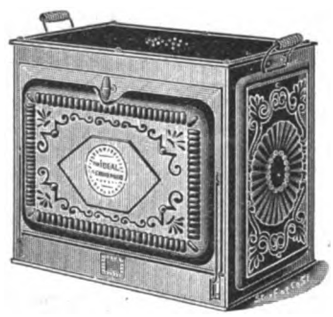
The Victor

Our New Oven for 1904

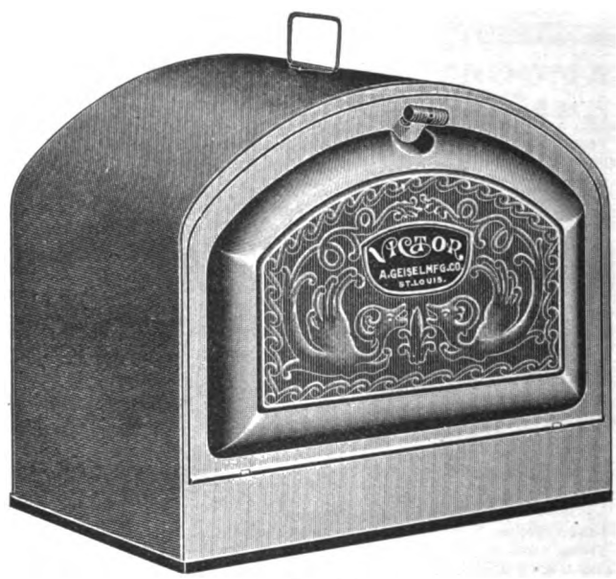


SET-UP OVENS

INVESTIGATE AND COMPARE the size, style, finish and price of the Victor with that of other makes, and we are sure you will send us your business.

Among Set-Up Ovens none is made of better material, none more beautifully designed and sold at so low a price as the Victor.

We have revolutionized the cost of oven making. We want to give you the benefit of it.



Being the largest manufacturers of Ovens, we are in position to offer a wide selection from a large line of high grade goods.

No. 8 Ideal Knock-Down Oven, set up, ready for use.

No. 8 Ideal Knock-Down Oven, packed one in a box, ready for shipment.

VICTOR

Knock-Down Ovens

Our Knock-Down Ovens are in the lead. They are sold the world over.

Are easy to handle; not easily damaged in transit or in stock; take one-fourth the space for storing Set-Up Ovens. Freight rate cut in half.

INVESTIGATE BEFORE CONTRACTING ELSEWHERE for next season's requirements. Write us for prices and further information.

Mention HARDWARE.

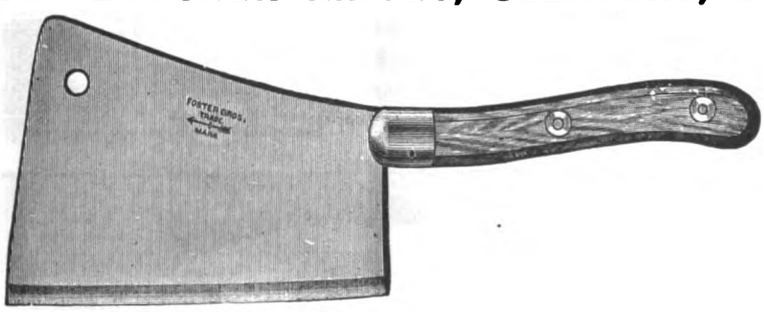
CHATILLON SPRING SCALES.

OUR attention having been called to the fact that inferior makes of Spring Scales are being sold to butchers as "Chattillon" Scales, we deem it due to the trade and to ourselves, in order to protect the merits of our Spring Scales, so well and favorably known for more than sixty years, to inform you that every Spring Scale manufactured by us

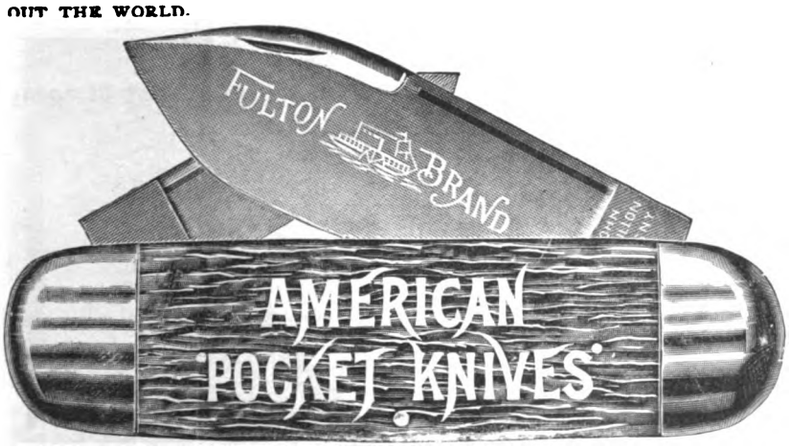


has our name as makers plainly on the dial, thus:

John Chatillon & Sons. Makers. New York. U.S.A.

and any scale without this name on the dial is NOT A GENUINE CHATILLON SCALE.

FOSTER BROS.' BUTCHER KNIVES, CLEAVERS, STEELS, ETC.

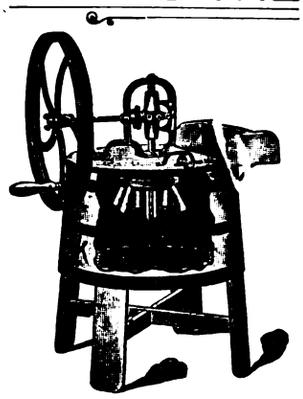


These Tools are recognized in the Markets, Packing Houses and Abattoirs throughout the United States as the standard of excellence, quality being the first consideration. We carry in stock every style and size of Knives, Cleavers and Steels used in cutting meat; also Knives for kitchen use in Hotels, Restaurants and for domestic purposes.

FRIEDERICH DICK'S MAGNET DIAMOND STEELS.

By careful workmanship and the use of a special steel in their manufacture THEY HAVE BECOME FAMOUS THROUGHOUT THE WORLD.

Finest Quality American Pocket Cutlery in large variety. Knives that are good sellers and will give satisfaction to the user.



ESTABLISHED 1835

JOHN CHATILLON & SONS, Now York City.

85 to 93 CLIFF STREET and 12 JACOB STREET.

WHY IS THE

O. K. THE BEST ROTARY WASHING MACHINE?

—BECAUSE—

1.—It is the only Rotary washer that has **Revolving Steel Ball Gearing**, reducing the friction and thus making machine so light running and almost noiseless.
2.—The tub is made of **Louisiana Red Cypress Lumber, cherry finish**; the legs are **solid with tub** (not removable, breakable legs fastened with screws).
3.—The wheel turns right or left, pin wheel or dasher reverses automatically, turning the clothes back and forth through the hot suds, and cleaning them without rubbing them to pieces.
4.—This washer is made by **experienced mechanics**, and will out-last any other washer on the market.
5.—The tub has a wringer box fastened with steel brackets.
6.—The lid on the tub closes tight, **no escape of steam.**

131 Congress Street,
BOSTON, U. S. A.

Why Work On Wash Day?

THE "DOMESTIC"

Like our other three Ball-Bearing Washers—"Home," "1900," "1900, Jr." — does all kinds of washing perfectly, with the least possible labor on your part. It works while operator sits by its side revolving the tub by its handle.

The tub is made of quartered clear pine bound with 1⅛ flat steel hoops, strong and durable.

THERE'S MONEY IN HANDLING THEM because one pleased customer brings you others.

Send for catalogue and price list.

THIS IS THE COVER

THESE THE BRANDS

Specially Prepared Brown Waterpreof Duck Horse and Wagon Covers

The Wagner Mfg. Co.

CLEVELAND, OHIO

From Margam Forge, Glamorganshire, South Wales, to Martin's Ferry, Belmont Co., Ohio.

MF

Note the Coincidence:

The most favored brand of roofing tin, the MF which originated at Margam Forge in South Wales about sixty years ago, is now being produced by the American Tin Plate Co. in its works at Martin's Ferry, Ohio.

At the Martin's Ferry Works the MF old style process has been combined with the "New Method" of finishing Terne Plates. The result of this happy combination has been the U. S. Eagle N. M.

Ask W. C. Cronemeyer, Agent, 1211 Carnegie Building, Pittsburg, Pa., for our new booklet which teems with useful information.

BISSELL'S "CYCO" BEARING SWEEPERS

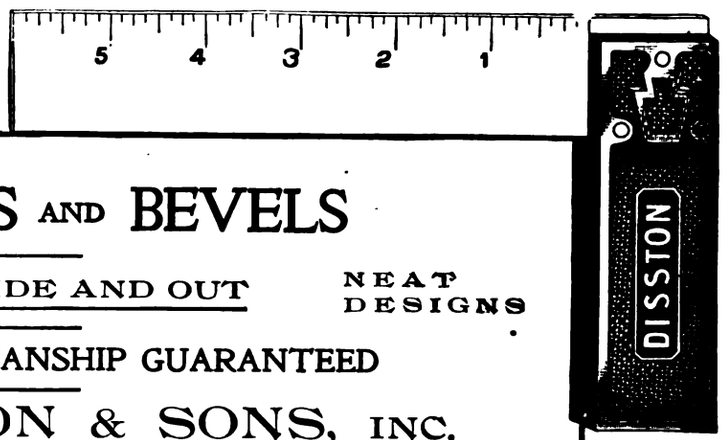
ARE sold under a positive permanent guarantee as to perfection of mechanical construction, sweeping qualities, etc., and as our goods are known to last from five to fifteen, and even twenty years, we do not have to resort to the expedient of a guarantee limited to one year, or three years. An article of inferior mechanism and destitute of salability, cannot be foisted upon the public by guarantees. A commodity must stand on its merit, and here is where the Bissell Sweeper has always been supreme. Facts are cold, unsympathetic things. The Bissell has stood the test of time, has steadily grown in favor with both the trade and the consumer, never once feeling the inroads of competition, until to-day it is entrenched as it never was before, in this and every other country where carpet sweepers are used.

Just consider how extensively the Bissell Sweeper is advertised.

How it is in demand, and everywhere preferred.

What little effort is required to sel it.

How it practically sells itself.



And last, but not least, that it is the ONLY carpet sweeper on the market sold at a fixed retail price, which makes the dealer's profit good and absolutely secure.

Write for our Christmas Offer and our $500.00 Cash Prize Ad. Prospectus.

ASBESTOS SAD IRONS

REPRESENT the highest type of Sad Irons on the market. It is the only complete line comprising every kind of iron required for family use.

The Laundry, Polishing and Pressing Irons are so made that one hood or cover does for all, enabling the owner of one iron to procure the others at trifling cost, by purchasing only the required cores.

"The Laundry Sets, Pressing, Polishing Irons and Shirt Waist Sets are now packed in neat lock cornered sliding cover Boxes, one set or iron to the box and crated.

Sleeve, Tourist and Baby Irons are packed in cartons, one iron to the carton and boxed.

This is not alone an ideal method of packing the goods, but also insures their reaching the consumer in the very best of order.

If you care to stock a line of Sad Irons complete in every possible requirement, which bring more money and afford a better profit than others, write us or your jobber for prices on the complete line."

HARDWARE

At the recent annual meeting of the Reading Hardware Company, held at their office in Reading, Pa., the following officers were elected for the ensuing year: President, John E. Harbster; vice-president, A. E. Gery; secretary, Howard L. Boas; treasurer, S. Y. Reigner, and sales manager, G. N. Jacobus. Board of Directors: M. Harbster, W. M. Grisen, John E. Harbster, A. E. Gery, Howard L. Boas, Isaac Treat and John Mohn.

The fifth annual meeting of the Retail Implement Dealers' Association of South Dakota, Southwestern Minnesota and Northwestern Iowa will be held at Sioux Falls, S. D., Dec. 8, 9 and 10, with headquarters at the Cataract Hotel. M. D. Thompson, of Vermillion, S. D., is president of this association, and W. S. Hill, Alexandria, S. D., is secretary.

D. P. Hale, who has for the past six years represented the J. Stevens Arms & Tool Co., has resigned, as his manufacturing and banking interests at Sandersville, Ga., required more of his attention than he has heretofore been able to give them. He will be succeeded by Charles E. Roberts, who has for the past five years been connected with the Winchester Repeating Arms Co., of New Haven, Conn., and the last two years represented them on the road. Mr. Roberts will have entire charge of the territory south of the Ohio River and as far west as Texas.

The Bissell Carpet Sweeper Co.'s space at the 26th Semi-Annual Furniture Manufacturers' Exposition to be held in the New York Furniture Exchange, Lexington Avenue and 43d Street, New York, between January 11th and January 30th, 1904, will be located on the third floor, space 109. Messrs. E. H. Hudson, S. M. Halsey and Walter Daly will have charge at the Bissell Co.'s exhibit.

The Hardware business of Charles F. Bock & Son, Battle Creek, Mich., of which the late Charles F. Bock was senior member, will be continued under the same name (Charles F. Bock & Son), under the management of Frank F. Bock for the estate.

J. H. Price, general manager of the Pittsburg district of the American Steel and Wire Company, one of the underlying companies of the United States Steel Corporation, has resigned his position to take effect December 1. Mr. Price will become assistant to President John H. Jones, of the Pittsburg and Buffalo Company. Mr. Price is a recognized authority in the steel business, having spent nearly all his life in various capacities in and around steel mills.

From the ashes of the old Union Mfg. Co., phoenix-like, there has risen within the last 18 months one of the very promising manufacturing industries of Toledo. This is the American Wooden Ware Mfg. Co., manufacturers of Washing Machines, Churns, Stable and Derrick Pails, Plant Tubs, and all kinds of tight cooperage. Jas. H. Taylor, formerly of the Union Mfg. Co., is the man who conceived the organization of the new company and the new business, and while the movement has been a quiet one it has been effective. From the remnants of a business plant he reformed them into an active, thriving enterprise. From the start the business was encouraging and at the end of less than a year, the company doubled its capital and called in additional business talent. It was then that W. F. West entered the company as financial manager, Mr. Taylor taking the position of the trained and practical factory man. Under this arrangement the business has grown beyond the limits of the buildings and grounds occupied, and the company has recently purchased the property adjoining their present quarters and intend to enlarge their plant so that they can properly take care of their fast growing business.

George H. Brown, for a number of years New York manager of the Gilbert & Bennett Mfg. Company, has resigned his position on account of ill health. He has been succeeded by Edward F. Jones, a director of the company, and for a number of years their New England representative.

National Twist Drill & Tool Company, Detroit, Mich., have installed a complete outfit of modern tools for the manufacture of Reamers, Cutters and Special Tools, and will soon commence building special machinery for manufacturing all kinds of Twist Drills. Following are the officers of the company: Wm. H. McGregor, president; P. J. Hoenscheid, vice-president and manager; A. W. Ehrman, treasurer; Chas. R. Becker, secretary. Mr. Hoenscheid has had 20 years' experience in this line of manufacture, and is well qualified for the management of the plant.

Sportsmen and others will be interested in the November issue of the *Baker Gun Quarterly* just published by the Baker Gun and Forging Co., Batavia, N. Y. It contains articles on the subject of buckshot and its use in choke-bored guns, some hints on the manufacture of guns, essays on duck shooting and other instructive matter besides full descriptions and prices of the Baker guns. This number has as frontispiece a beautiful half-tone reproduction of a sketch by Roy Mason, of Batavia, N. Y., called "Comrades," referring to the Baker gun and his faithful dog, on which the attention of a veteran sportsman is affectionately bestowed. The *Quarterly* will be sent free to any address on request.

It is estimated that although more than $10,000,000 worth of sporting goods were sold in the United States in 1902, all indications point to the fact that the record for the present year will be much higher.

Our trade with Mexico is increasing rapidly, the total now being approximately $83,000,000 annually. Our largest item of export is iron and steel manufactures, including $7,000,000 worth of machinery last year. All of which shows that our Southern neighbor is sharing our own prosperity.

The Stowell Mfg. & Fdy. Co., Milwaukee, Wis., advise us that they are preparing a catalogue to embrace their new line of haying tools, which they hope to issue by January 1st next. Tey have also in preparation a new door hanger catalogue showing the latest improvements in this line.

The current number of "The Annals of the American Academy of Political and Social Science," of Philadelphia, has in it an admirable article on "Present Day Jobbing" from the pen of James W. Ritter of the Biddle Hardware Company, Philadelphia. We hope to make a more extended reference to the same at a later date, the article showing close consideration and wise analysis of a subject worthy of both.

GUARANTEE ON CHAINS FOR BICYCLES, ETC.

The following form of guarantee has been adopted by American manufacturers of Chains for Bicycles, Motor Cycles and Automobiles:

We will replace such Chains as in our judgment show defects in workmanship or material, provided same are returned to us for inspection, transportation charges prepaid.

We agree to prepay return transportation charges to consignor on all replacements.

On account of the various conditions under which Chains are used and cared for we cannot guarantee the certain performance of any Chain, and will not replace Chains or parts which have been used. Customers should inspect Chains as soon as received and report any supposed defects or complaints before returning same.

The Circulation of "Hardware" is Larger Than That of Any Other Paper in the United States Devoted Exclusively to the Hardware Trade.

Editorial Trade Review.

The closing month in the year brings to a good many jobbing houses the annual inventory and closing of the year's business with the ascertaining of the amount of net profits produced. The feeling seems to be general that the showing will be a satisfactory one, the prospect being fairly evident that next year will be of a less promising character. Conservative estimates of its bulk of business regarding the first six months as proving more fertile in profitable results, than the season that follows, and yet the chances of good crops for which a greater preparation than ever seems probable, will make the year round up under conditions that equal those of the present time.

The purchases during December, especially those for immediate sales, will partake more of the character of holiday requirements than they will of applicability to the general stock. Purchases, for several reasons, adding to present stock being the principal one, are noted for cautious conditions surrounding them; the belief is certainly gaining strength that the changes, if any, that will be made in the quotations governing future transactions will be on a plane indicating a lower trend to the market, although not to an extent that would be regarded as radically aggressive. Slight concessions are expected from manufacturers of goods which market quotations on iron and steel materially affect, and they will influence such early orders as the manufacturers are anxious to obtain in order to keep their usual force of employees well provided with employment representing a trade confidence that augurs well for the future of business. The jobbers have been able for several years past to carry good stocks of their own, from which to fill the orders of their customers and secure sales which without stocks on hand would be doubtful at least.

Prices have been held fairly steady throughout the season; changes, except those that strengthen the market, have been comparatively few, and this condition of affairs means a healthy business which should and must dominate the future. The wise merchants will have goods to deliver at once, if wanted; the "promising" days have been relegated to an unprofitable past.

The demand for builders Hardware is gratifying to the jobbing trade; in many sections the building of houses during the Fall has reached a stage where the Hardware needed for finishing the job makes sales in that line especially good. Stocks are by no means in an overstocked condition, and it is believed that no radical changes need be anticipated for Spring sales, as enough business has been held up through labor demands that were untenable, to give a good start for Spring requirements, and with stability in prices, the usual delays in acquiring stock may be avoided by the acceptance of orders for early delivery.

The volume of Hardware Exports show very encouraging improvement, and it is the intention of the large manufacturers who have done their best to increase the distribution of the output in this direction, to hold this market firmly in hand, without regard to conditions surrounding the domestic distribution. They realize what a safety valve it would prove to be in the case of any permanent recession in the prosperous trend of the big business done of late years, in which increased facilities on every hand have resulted in a volume of production never previously equalled. The salvation back of a possible slump would be the intelligent fostering of a foreign demand.

EXPORTS OF DOMESTIC MANUFACTURES.

Exports of manufactures in October seem to show something of the expected revival in that branch of our foreign commerce. The total exports of manufactures in October, as shown by the reports of the Department of Commerce and Labor through its Bureau of Statistics, amount to $37,558,675. This is a larger export than in any preceding October, except that of 1900, and even in that banner year of exports the total was less than $100,000 above that of October, 1903. The increase over October, 1902, is about $1,500,000; over October, 1901, $3.000,000, and is more than double the total for October of 1893. Most of the principal articles of manufacture show a slight increase in October, 1903, compared with October, 1902. Agricultural implements show a gain of over $40,000, compared with the same month of the preceding year; cars and carriages, about $25,000; clocks and watches, $45,000; copper manufactures, $450,000; scientific instruments, $130,000; steel rails, $113,000; wire, $35,000; sewing machines, $75,000; iron and steel manufactures of all kinds, $318,000; boots and shoes, $156,000; leather of all kinds, $419,000; mineral oil, $604,000; manufactures of tobacco, $50,000; manufactures of wood, $50,000, and manufactures of wool, $140,000. Cotton manufactures show a slight reduction, the total exports for October, 1903, being $2,005,650, against $2,689,076 in October of the preceding year. This reduction occurs almost exclusively in exports of cotton cloth to China, of which the total for October, 1903, was 9,370,600 yards, valued at $414,156, against 20,472,678 yards, valued at $1,036,726, in October, 1902. The figures for October, 1903, however, compare favorably with those of the corresponding month in years preceding 1902, in which the exports of cotton cloths to China were extraordinarily large by reason of the small importations during the disturbances of 1901.

On the import side manufactures show a slight decrease as compared with October, 1902. Articles of voluntary use, luxuries, etc., are for October, 1903, $11,242,417, against $11,676,126 in October, 1902. Articles manufactured ready for consumption in October, 1903, are $14,375,375, against $14,540,799 in the corresponding month of last year, and articles wholly or partially manufactured for use as materials

Digitized by Google

in the manufactures and mechanic arts are $12,843,890, against $13,348,145. Iron and steel manufactures, of which the importations had been unusually large, show a marked reduction, the total for October, 1903, being $2,552,380, against $4,149,631 in October of last year. Articles in a crude condition for use in manufacturing also show a reduction in October, 1903, as compared with October, 1902, in which the total was the largest for October in the history of our import trade.

The figures of exports of manufactures for the ten months ending with October show a condition quite as satisfactory as those relating to the month of October only. As has been already indicated, the October exports of manufactures are larger than those for the corresponding month of any preceding year except 1900, and this may also be said of the ten months ending with October, in which the exports of manufactures were $384,688,560, a larger total than for the corresponding ten months of any earlier year except 1900.

The table which follows shows the total exports of manufactures in October, and in the ten months ending with October, from 1893 to 1903:

EXPORTS OF DOMESTIC MANUFACTURES FROM THE UNITED STATES.

Years.	*One month ending with October.*	*Ten Months ending with October.*
1893	$16,680,972	$146.556.413
1894	15,361,093	148,739,702
1895	18,778,945	164,572,481
1896	23,469,182	208,276,185
1897	22,249,159	234,728,097
1898	25,416,046	253,177,715
1899	33,864,376	311,369,173
1900	37,651,337	376,247,618
1901	34,425,130	332,084,762
1902	35,939,593	347,244,064
1903	37,558,676	348,688,560

THE TRADING STAMP QUESTION.

The Merchants Association of New York have recently mailed the following letter to large merchants in this city, and prominent retail concerns in the important cities of the State with the hope and expectation of eventually influencing the forthcoming session of the State legislature to have the trading stamp abuse abolished, believing as they do that it is an artificial means of stimulating trade which results to the injury of the merchant as well as the consumer.

Gentlemen: We are besieged by merchants throughout the State to take action during the next session of the Legislature to abolish the harmful effect of Trading Stamps, now so detrimental to business men in the small towns and villages of this and other States.

This Association is now examining the laws which have been passed upon this subject by several States, and the judicial decisions which have shown the weak points of these laws. Our study leads us to believe that a law which will abolish the trading stamp business by equitable and constitutional means can be drafted.

Such a measure, if adequately supported by business interests would beyond question be passed by the Legislatures of this and other States. The Merchants' Association will undertake to procure the passage of bills to regulate Trading Stamps and abolish their harmful effects if the necessary money is subscribed by those directly interested.

The suggestion has been made that firms manufacturing or controlling specialties whose retail selling price is fixed by contract are particularly interested, for the reason that giving trading stamps with articles having a contract retail price is in effect to cut the price of such articles, to the great harm of other retail dealers who cannot give trading stamps and are not permitted to sell restricted articles at less than contract retail price.

We shall be pleased to have your views on the subject and to receive your subscription to a fund for the purpose indicated. With the fund so subscribed, the Merchants' Association will systematically organize the business interests of the State in support of the measure, and through them bring such proper pressure to bear upon the Assemblymen and Senators from each district as to ensure the passage of an equitable bill free from constitutional objections. This will be done by means of circulars and petitions thoroughly distributed in every county, supplemented by personal work of organization if desirable.

Each round of circulars sent out will cost from $600 to $700; in addition to those will be the cost of personal visits by the agents of the Association to all the leading towns of the State. The entire expense will be about $10,000. After the bill has been prepared and introduced, the Association will bring the pressure of every constituency in the State to bear upon the respective Assemblymen and Senators in connection with constantly personal effort at Albany by the representatives of the Merchants' Association.

A prompt and liberal response to this appeal is requested.

Very truly yours,

THE MERCHANTS' ASSOCIATION OF NEW YORK.

TOO MANY BANKRUPT STOCKS.

One of the great troubles that the jobbing trade in selling to retailers had to bear was the dishonesty of a great many of these parties in selling out their whole stock of goods in bulk and putting the money in their pockets and going to pastures new. The matter was taken up by the New York Credit Men's Association some couple of years ago and they had passed through the Lesiglature a bill preventing the selling out of stocks of goods in bulk out of the ordinary course of business. The law seemed to be so pertinent that it has since been adopted in nineteen other States and there are hopes that it will be passed in all the States of the Union. This law prevents the selling out a stock of goods in bulk, unless both the buyer and the seller acquaint the creditors five days in advance of the proposed action and give them an opportunity to protect themselves. The New York Credit Men's Association have issued to their members a pamphlet giving the statutes governing this in the various States in which it has been passed, with the court decisions on the same. The Association would be very much pleased to give a copy of this, gratis, to anyone applying, personally or by mail, to the Secretary at the rooms of the Association, 320 Broadway.

NATIONAL CREDIT MEN'S ASSOCIATION.

The Next Convention.

New York has lost a great deal of its reputation as a "convention" city, other cities being much more energetic and ambitious to secure such assemblages and to offer all sorts of inducements in that direction. New York, as a rule, rests content feeling that its size, importance and attractions will draw crowds without business or association conventions.

In the case of the National Credit Men's Association, Kansas City, Detroit, Buffalo, Milwaukee, Louisville and St. Louis have in their turn captured the convention and we are happy to say the next meeting will be in New York in June, 1904. Three days will be devoted to the entertainment of the delegates and their ladies, in all five hundred being expected. Besides the regular business meetings of the convention being held in a hall, a new feature may be introduced in the shape of an excursion up the Hudson, taking all day, during which the proceedings of the convention will continue uninterrupted, the scene of action being changed from committee rooms to steamer parlors. During Summer weather such an idea, no doubt, would be very well received.

The membership of the National Association of Credit Men is now made up of nearly five thousand of the leading merchants of this country. The membership of the New York Association includes about five hundred and fifty prominent mercantile firms of New York. The Credit Men's Association has been very active in its work to improve the Bankruptcy Law, the Bulk Sales Law, and a number of other laws for the betterment of commercial conditions and has several under consideration for the coming session of the Legislature. Various representative committees of merchants have been appointed to take charge of the convention, among others are:

THE WAYS AND MEANS COMMITTEE.

M. E. Bannin, Chairman, Converse, Stanton & Co.; E. E. Huber, Eberhard Faber; Hugo Kanzler, Muser Bros.; Marcus M. Marks, David Marks & Sons; W. E. Purdy, Chase National Bank; E. W. Riker, Yale & Towne Mfg. Co.

ENTERTAINMENT COMMITTEE.

Charles E. Meek, Chairman, National Lead Co.

ACCOMMODATIONS COMMITTEE.

Malcolm Graham, Jr., Chairman, F. O. Pierce Co.

CENTRAL COMMITTEE.

R. P. Messiter, Chairman, Minot, Hooper & Co.

It is necessary that $10,000 be raised to defray the expenses of this convention, and as it is to the interest of every citizen, particularly the business men, that the out-of-town merchants shall be well impressed by the New York market, it is expected that the contributions will readily come from varied sources.

BICYCLES AT THE SPORTSMEN'S SHOW.

Capt. J. A. H. Dressel, secretary of the Sportsmen's Exhibition Company, whose office is at 1123 Broadway, New York, states that he has received more applications for space from exhibitors for the 1904 show at this time than in any previous year. Capt. Dressel has personally done all the preliminary work connected with the coming show, and he proposes to attend to all the details of active management personally. The Pope Manufacturing Co. has rented half of the concert hall in Madison Square Garden in which, during the Sportsmen's Show, it will have on exhibition the latest things in bicycles, motorcycles and automobiles. At the office of the Pope Mfg. Co. in the Syndicate Building, it was given out that Col. Pope proposes to show the trade that there is good money to be made out of bicycles and motorcycles, and that there is and always will be a demand for high grade goods in these lines. Bicycles certainly were a good proposition until the trade got into its present demoralized condition. And if there is any man in this country who can again put the wheel industry on a proper basis Col. Pope is certainly the man, may his shadow never grow less.

INTERNATIONAL COMPETITION OF APPARATUS.

The "Circolo Enofilo Italiano," a society of wine dealers and distillers at Rome, Italy, announces for the occasion of their yearly wine fair, an international competition of apparatus utilizing denaturated spirit, such as: motors, automobiles, moto-cycles, alcohol lamps, heating apparatus, etc., to take place in Rome from February 6th to Feb. 16th, 1904.

Programmes are ready for distribution relating to said competition, which promises to be interesting and inviting for manufacturers of the above stated kind of commodities, both for the prizes that are to be awarded and for the business opportunities in this line, since the passing in Italy of a new law concerning the production of denaturated spirit and encouraging its use.

Intending exhibitors will be charged an admission fee of 30 frs. and 10 frs. for each square metre of space occupied. The apparatus will be admitted to the competition in temporary exemption of Customs duties, and any expense connected with their trial, will be defrayed by the Circolo Enofilo Italiano. Further information may be obtained from B. Stozione, Enstecnica Italiana, 35 Broadway, New York.

NEW ENGLAND HARDWARE DEALERS ASSOCIATION.

New England Hardware Dealers Association, on the evening of the 9th inst., participated in the festivities connected with the proper observance of their annual Ladies' Night, and its accompanying banquet. It took place at the United States Hotel, Boston. Rev. Wm. T. McElveen, Ph.D., of Boston, was the principal speaker of the evening, his remarks being responded to on behalf of the ladies by Mrs. Elisha J. Neal, of Lowell, Mass. The Copley Square Orchestra furnished the music, which was supplemented by songs by Hugh Campbell, baritone soloist, and Miss Miriam Carver, who gave several very effective readings. An exceedingly attractive programme having been arranged for, an extremely enjoyable evening was the result. The committee having charge of the whole affair consisted of Samuel H. Thompson, Myron H. Tarbox, D. Fletcher Barber, John B. Hunter and James A. Farless.

AN ASSOCIATION FOR THE PROMOTION OF EXPORTS.

The Foreign Trade Association of America recently organized under a charter from the State of New York, have for their special object the fastening and encouraging of export trade of the United States, for the promotion of which all their efforts are to be directed. The first regular meeting was held on December 1st, at 66 Broad Street, New York.

The following officers were elected, to serve until January 12, when the first annual meeting will be held and officers elected for 1904: President, Aristides Martinez, of Longman & Martinez; first vice-president, W. C. King, of the General Chemical Company; second vice-president, R. R. Fogel, of R. R. Fogel & Co.; treasurer, William M. Hollins, of H. B. Hollins & Co.; secretary, W. E. Simpson, editor of *The Banker and Miner*, of Mexico. These officers also constitute the Board of Directors.

The principal subject under discussion had reference to the recent concession of 33⅓ per cent. granted by the Trunk Line Association on foreign rates on manufactured iron and steel products for export. It was developed at the meeting referred to that other manufacturers regarded this action as a discrimination against other classes of products and resolutions were adopted naming a special committee to be known as the Export Rate Committee of the Foreign Trade Association of America, who would be authorized to employ independently the ablest counsel and rate experts and to formulate the necessary information "tending to cause rates for export business to be reduced to a basis more in harmony with actual requirements."

The following Nominating Committee, to choose a ticket for the annual election on January 12, was chosen: B. Lissburger, of B. Lissburger & Co.; H. B. Cook, of the Cook & Bernheimer Company; George F. Duyster, of Rounds & Dillingham; Charles Hess, of Charles Hess & Co.; and J. W. Hamilton, of Milliken Brothers.

WASHINGTON HARDWARE ASSOCIATION.

The fifth annual meeting of the Washington Hardware Association was held on the 11th and 12th ult., at Whatcom, and was the most successful since the formation of the association. A very good attendance of members was noted, and there was much enthusiasm manifested in the work of the assembled delegates. The following officers were chosen for the ensuing year: President, H. D. Cowles, of Washington Hardware Company, Tacoma; vice-president, Walter M. Olive, Mission; secretary, A. C. Blake, of Munro, Blake & Haskell, Whatcom; treasurer, G. M. Cochran, of Snohomish Hardware Company, Snohomish; F. A. Ernst, of Ernst Bros., Seattle, member of Executive Board. With a view of facilitating the work of the association and bringing about a better feeling among competitors, the members of the association were urged to form local or sectional organizations. The delegates were handsomely entertained by their local brethren, and the meeting proved to be an exceptionally interesting and enjoyable one. One of the most important questions discussed during the session was the necessity of all the retail Hardware dealers in the State being represented at the conventions. This is impracticable, however, in the case of some of the firms who are located so far from the place of meeting, and to obviate this difficulty, it is proposed to form local associations in several sections of the State.

A GERMAN CORNER OF THE UNITED STATES.

A curious instance of the success of foreign citizens in establishing industries in the United States is given in a recent issue of the *Wood-Worker*. It appears that Batesville, in the State of Indiana, a town of about 2,000 inhabitants, has six furniture factories, two coffin and casket factories, two sawmills, a veneer mill, a sash and door factory and a novelty works. All the money required to operate these industries is furnished by the people of the county within which Batesville is located. It is claimed that no other town of its size in this country does so much business.

RECENT TRADE PUBLICATIONS.

JOSEPH DIXON CRUCIBLE CO., Jersey City, N. J., have issued an extremely artistic booklet which they have designated "Dixon's Graphite Suggestions." It contains 24 pages of information regarding graphite such as can be obtained only from Dixon, and it is one of the very finest productions of the printers' art which has come before us. The cover represents scribes of old inscribing with graphite; the cuts and illustrations throughout the book are the very finest half-tones, and the subjects in each illustration are so grouped as to impress one that it is the work of the artist. The printing is fine, and the paper excellent. Altogether it is a work worthy the highest commendation, and will be forwarded upon request to those interested.

THE HART MFG. CO., INC., Greenville, Ohio, are placing before the trade a neat, concise catalogue of 24 pages describing and illustrating their screen doors, screen windows and window frames. Their screen doors are made of both soft yellow and Norway pine; special doors of plain and quarter-sawed oak. The stiles and rails are made from 3 to 4 inch rough stock, dressed to 3¼ and 2¾ inches, center cross pieces 1¾ inches; bottom rail 5¾ inches; thickness ⅞ or 1⅛ inches. Every joint is mortised and well glued, making it impossible for it to sag or get out of line. The mouldings are flush beaded over wire cloth. Opposite side beaded to correspond, except in High Standard, which has surface moulding. The best grade of green or black wire cloth is used; double selvage; 12 mesh. It is well strained and put on with tacks. All natural finish doors have black wire cloth unless otherwise ordered. The company call special attention to their "Eclipse" window screens. They state: "It is what the name implies—Eclipses them all." It is made from smooth beech wood. The slide is made with double dove-rail, making it impossible to come apart. A round metal tube supports the center of the window. Every screen is perfect and the adjustment is unsurpassed. They are made with either green or black wire cloth and come packed one dozen in a crate. The catalogue will be found a very useful one, and will be mailed upon application to the company.

THE INDEPENDENT REGISTER CO., Cleveland, Ohio, represented in the East by W. H. Landers Co., Syracuse, N. Y., have issued recently a very extended price list and catalogue of registers and ventilators, gas heaters, stove pipe radiators and Hardware specialties manufactured by them. A specialty made by this company is their Independent Stove Pipe Radiators. The company eulogize as follows: "It is a fact that the best stoves and furnaces utilize but a comparatively small part of the heat produced, while the balance goes up the chimney and is wasted. By putting your hand on the stove-pipe, you will find it to be very hot, and the outside of the pipe is much cooler than the inside. This heat is simply wasted fuel. You can save this heat by the use of an Independent Stove Pipe Radiator. Take out a section of your stove-pipe, put the radiator in its place, and it will stop that wasted heat and radiate it into your home. Put the radiator in the room next to your stove; put it in a sitting room, bed room or bath room upstairs, and it will heat any one of them without the cost of a single penny for fuel, and do it by utilizing heat that would otherwise be lost up the chimney. Put the radiator in the same room with your stove and it will double the heating capacity of the stove or save a large part of the fuel." The Independent radiators are made with beautifully ornamented tops and bases in a variety of finishes and are an ornament to any room. Dealers may have the above-mentioned catalogue for the asking.

THE NOVELTY MANUFACTURING COMPANY, Jackson, Mich., among the handsome printed matter distributed for the use of those handling their line of Aluminum Oil Heaters, one of the most taking is in the form of a booklet with a characteristic illustration of a heater on the outside cover adorned by the motto "Heats Half a Million Homes" and this might be called the name of the booklet, which is full of information in regard to the merits of the heater, and embellished with a number of handsome half-tones to assist in making the contents of the booklet interesting. Included in the pages are a number of testimonials certifying to the good features of the aluminum oil heater. It certainly does credit to the company to get up such attractive literature to assist in the sale of their heaters.

THE UDELL WORKS, Indianapolis, Ind., have sent us their catalogue of 36 pages, embracing in its contents Housefurnishing Wooden Ware, Commodes, Medicine Cabinets, Folding Tables, Ladders, etc., etc. These are all illustrated in a handsome manner with complete descriptions, so that mail orders even can be readily understood. A fine assortment of medicine cabinets is shown in 20 varieties, covering every possible requirement in this line of every style and finish. The assortment of commodes is also a large one, and blacking cases, folding tables, folding steps and toilet trees are shown at great length. Included in its contents is a large line of such housekeepers' specialties as spice cabinets, scouring boards, drying racks, ironing stands and boards, towel rollers and racks, etc., etc., the catalogue concluding with a line of ladders for general purposes that have long been well known to the trade.

THE OHIO CULTIVATOR CO., Bellevue, Ohio, have recently issued a new catalogue in pamphlet form of 64 pages, covering their important line of cultivators, with which the company have been identified for so many years, including the famous Ohio in all of the various styles; the New Ohio, and the Ohio, all representing different grades. Embraced in its contents are the Bellevue disk harrow and the New Ohio steel lever harrow, and the Improved Star Anti-friction disk harrow, etc., etc. The contents of this catalogue are of sufficient importance to make it a desirable one for those of our readers handling this class of goods. An excellent portrait of the president, H. C. Stahl, forms the frontispiece of the catalogue facing a fine view of the works at Bellevue, Ohio, which gives an indication of the extensive facilities of this company.

THE MICHIGAN BOLT & NUT WORKS, Detroit, Mich., have recently distributed to the trade their catalogue No. 10, which is a pamphlet of 70 pages printed on excellent paper and finely illustrated, giving wood cuts of all their specialties which includes about everything in the bolt and nut line embraced in the wants of the Hardwareman or manufacturer, including machine bolts, machine bolt blanks, bolt nuts, stud bolts, lag and coach screws, hanger screws, etc., etc. This is a very attractive catalogue and one that will be found desirable for the Hardwareman's use. In connection with the contents a number of tables are given, giving the estimated weights of nuts; approximate weights of machine bolts per 100, also those of lag and coach screws and skein screws; weight of flat bar and band iron per lineal foot and round and square rolled iron. These are valuable additions to catalogues of this description and should be more often made a portion of the contents. The catalogue concludes with a telegraphic code of wide dimensions, covering every portion of their product, and every possible combination of instructions.

THE AMERICAN STEEL & WIRE CO., Chicago, Ill., in the set of publications issued by them include a catalogue of wire rope and fittings dated September, 1903, and is intended to cancel the issue of April, 1900. This is a handsome pamphlet of 56 pages, illustrated with well engraved half-tones, and covering the production of that company in wire rope and fittings of every description. The contents of the pamphlet gives information of technical character in addition to the usual trade information in regard to sizes and dimensions, making it an extremely interesting publication independent of its value as a guide for ordering.

LEGAL CORRESPONDENCE.

Any subscriber to "HARDWARE" is privileged to ask any legal question he pleases in this Department and it will be answered free of charge. Address all communications to Law Editor "HARDWARE," No. 309 Broadway, New York City.

Accident on Freight Elevator.

QUESTION: My brother is employed by the owners of a certain building to run a freight elevator. There is an iron girder which projects into the elevator shaft and acts as a support to one of the floors of the building. My brother was not told anything about this, and when he took the elevator up his foot extended slightly over the edge of the platform and was crushed against the girder. The shaft was so dark that nothing could be seen. Could he recover against the owners of the building, his employers? The accident occurred in a town in Iowa.

REPY: There has been a recent decision by the Supreme Court of Iowa, where the facts were very similar to the case you describe (Olson vs. Hanford Produce Co., 82 N. Y. Rep. 903). In this case the court held that the workman had a right to presume that his employer would do his duty to him, viz: furnish him a safe place in which to work and warn him of any danger not apparent. The court also held that the question of whether the master under such circumstances as you describe was guilty of negligence in not guarding a girder of this kind was for the jury to decide, just as it was for the jury to say whether the plaintiff or employee was guilty of contributory negligence in allowing his foot to extend over the edge of the elevator. Whether or not your brother could recover damages remains for the jury to say. We are of the opinion, however, that he has a good cause of action. The result of such a trial, however, can never be predicted with any degree of certainty, as the matter largely rests with the jury.

Judgment—Supplementary Proceedings.

QUESTION: Some time ago a judgment was obtained against me for $20. I did not consider the claim a just one and refused to pay it. I have also managed to arrange my property in such a way that the execution was returned unsatisfied by the sheriff. I understand, however, that I may be examined in supplementary proceedings, and would like to know whether my judgment creditor would have the right to examine me in this way.

REPLY: In order to entitle the judgment creditor to maintain an examination in supplementary proceedings several matters are requisite: First, the judgment must have been rendered upon the debtor's appearance or personal service of the summons upon him, or by what is known as substituted service of the summons upon him; second, the judgment must be for a sum not less than $25, and an execution must have been issued out of a court of record, as provided in Section 2458 of the New York Code of Civil Procedure. Unless, therefore, the judgment obtained against you amounted to $25, or over, your judgment creditor would not have the right to examine you in supplementary proceedings; and, if the judgment was obtained against you in a court not of record, for instance, such as the Municipal Court of the City of New York, he would not be entitled to this examination, irrespective of the amount of the judgment obtained against him. If you are served with an order for your examination you should at once take the matter to a lawyer and submit it to him.

Master's Liability for Injury to Servant.

QUESTION: A few months ago I was obliged to employ a man to attend to certain machinery in my factory. I put an advertisement in the paper and finally engaged one of the men who applied for the position. He said he was a machinist and thoroughly familiar with the kind of work required of him. I cautioned him to be careful in oiling the machinery while it was in motion, and he said he understood his business and knew how to take care of himself. Not three days after that he was bending over a machine which had come to a stop when the machinery suddenly started and crushed three of his fingers on his left hand. He now threatens to bring suit against me for damages, as he says if the machine had been in proper condition it would not have moved and injured his hand. Kindly inform me whether, in your opinion, the man has any claim against me?

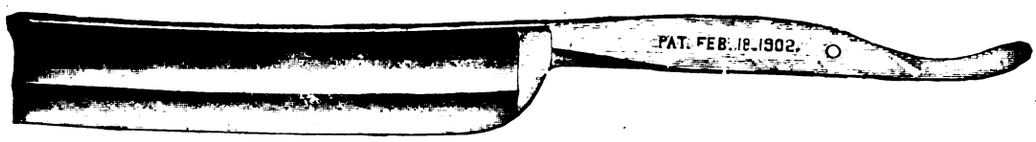
REPLY: As you describe the accident we are of the opinion that the servant was guilty of contributory negligence and that he cannot therefore recover damages for his injury. You acted properly when you employed him in informing him of the dangerous character of the work. It seems to us that a machinist employed to attend to machinery in a factory should know that a machine may start unexpectedly and that he would not place himself in a position of danger. We are of the opinion that the risk described was incident to your servant's employment and was assumed by him, and that, consequently, he cannot recover.

DEATH OF RUSSELL W. McKEE.

Russell W. McKee, who was from 1855 to 1902 identified with the Tin Plate and Metal house of Bruce & Cook, 186 to 190 Water Street, New York, died on Tuesday the 8th inst. of an ailment consequent to old age, at the Hotel St. George, Brooklyn, N. Y. He had been ill for several months, but had been able to attend to his varied duties until about three weeks ago. He was born in Middletown, Conn., on December 11th, 1826, and moved in 1846 to Brooklyn which has since been his place of residence. He retired from the firm of Bruce & Cook in January, 1902. Mr. McKee was president of the Brooklyn Sunday School Union, and known throughout the country as an earnest and practical religious worker, having been interested in Sunday School work from the time he went to Brooklyn, and was largely instrumental in founding the Sunday School Union more than forty years ago. He was a member of the Executive Committee of the New York State Sunday School Association, and gave large amounts for missionary work both at home and abroad. Other offices he held were that of president of the Society of Old Brooklynites and a director of the New York Port Society. In the Metal trade Mr. McKee was one of the best known veterans in that old established business, being esteemed as an authority on everything appertaining to this important industry. On his retirement from the firm in 1902 he was presented by his former partners and business associates with a loving cup in testimony of their affectionate love and esteem, many of them having been associated with him for periods of time represented by twenty, thirty and even forty years, and who freely acknowledged having profited by his counsel, and wise upbuilding of character, that made them by his example good citizens imbued with principles worthy of the commercial success they had happily achieved.

RUSSELL W. McKEE.

FAILURES IN NOVEMBER.



Failures during November, although smaller in liabilities than in October, far exceeded the November failures of the years immediately preceding. R. G. Dun & Co. report 1,162 commercial failures in the United States in November, with liabilities of $16,422,309. In the same month last year failures numbered 1,000 and the amount involved was only $9,276,716.

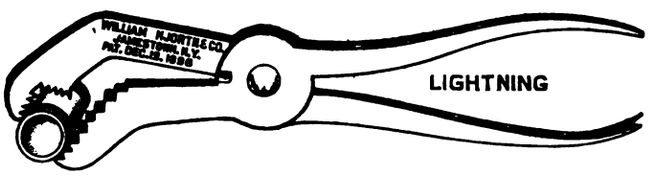
NEW GOODS AND SPECIALTIES.

KORN'S NEW PATENT GROUND RAZOR.

The George W. Korn Mfg. Co., Little Valley, N. Y., are the inventors and manufacturers of a new grinding device which grinds razors in an entirely new and improved way, which we illustrate herewith. The wall or ridge in the center of a razor is necessary to hold the edge firmly to the face. The thin English hollow ground razors vibrated so much that you could not shave clean with them, and the German grinding, which shaves clean and holds the edge firmly to the face, has to be honed very often, as it is thick above the edge, and for this reason the idea was conceived of concaving this wall or ridge, accomplishing the same result as the German razor accomplishes, by allowing it to become stropped very easily, and when it becomes necessary to hone it, the ridge does not need to be rubbed thin, but simply pulled a few times over the hone, and the razor is in shape again. The Geo. W. Korn Co. have patented this new device for grinding, which will be found superior to either the English or the German, making two concaves as illustrated, thereby giving the edge strength and elasticity, and at the same time giving the user a chance to hone the same almost indefinitely. This razor is only made of the very finest quality of steel, and is claimed to be the most costly in the world to manufacture. Each one is fully guaranteed.

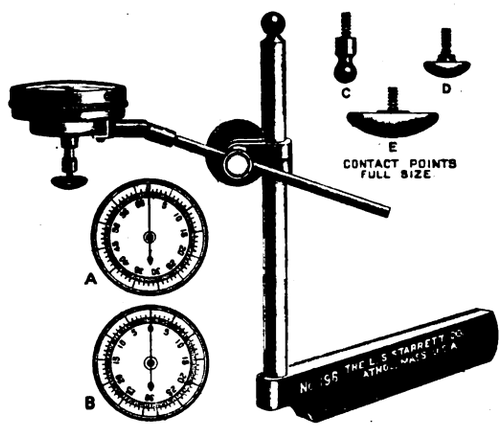
KORN'S AMERICAN DOUBLE HOLLOW GROUND RAZOR.



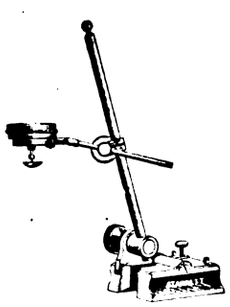
ENGLISH FULL HOLLOW GROUND.

GERMAN FULL CONCAVED.

THE LIGHTNING COMBINATION WRENCH AND PLIER.



W. Hjorth & Co., Jamestown, N. Y., among the several specialties with which their name is identified are the manufacturers of the Lightning Combination Wrench and Plier which we illustrate herewith. It is made from drop forged tool steel, properly tempered for its class of work, is highly polished and supplied to the trade in a manner indicating superior excellence. This useful tool is a perfect pipe and nut wrench combined. It takes pipe without the fear of crushing in the operation, and as will be noticed by the illustration, is always ready for use without special adjustment. While in use on pipe or nuts, pressure on one handle will do all the work. In its make-up it is provided with a wire cutter, screw driver and nail or tack puller. It is placed upon the market in the following sizes: 6 in. (nickel plated), takes ⅛ to 3-8 in. pipe; 7 in. (nickel plated), takes 1-8 to 3-8 in. pipe; 8 in. (highly polished), takes 1-8 to ¾ in. pipe; 12 in. (highly polished), takes 1-8 to 1 in. pipe.

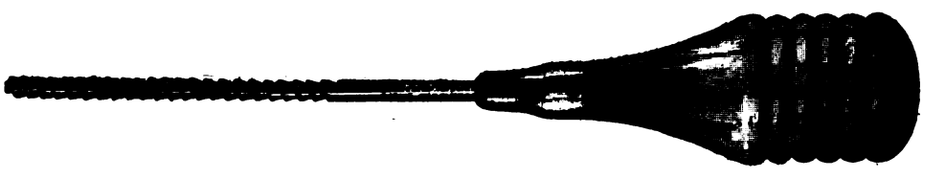


THE LIGHTNING COMBINATION WRENCH AND PLIER.

STARRETT'S UNIVERSAL DIAL TEST INDICATOR NO. 196.

The large number of high grade tools manufactured by L. S. Starrett Co., Athol, Mass., includes such appliances as are represented in the illustrations presented herewith of the Universal Dial Test Indicator No. 196. This indicator is simple, reliable, easily read and very sensitive. The slightest pressure upon the contact point produces a movement of the hand on the dial. The circumference of the dial is divided into 125 equal spaces, each one representing a movement of the contact point of one-half thousandth of an inch. One revolution of the hand therefore indicates 1-16 inch, and two revolutions ⅛ inch, which is the capacity of the instrument. The dials are figured in two different ways. Style A is marked from 0 to 62½, the figures denoting thousandths, and is most useful in greater forward movement, measuring, indexing, spacing, etc. Style B is marked from 0 to 31¼ to right and left, and is best for general use. By bringing contact point against the work with just enough pressure to give the hand one full turn, then setting it at 0, an opportunity is given for one full revolution of the hand to both right and left of 0, showing a rise or drop in the work and the amount of variation. A most valuable feature is the adjustable dial. By turning the knurled rim the dial may be instantly moved to bring the 0 mark to any point desired in relation to the hand. Each indicator is fitted with friction joint and removable 3 inch rod, adapting it for use in any position, at the top, bottom or side of work, also with three hardened and ground contact points adapted for different

UNIVERSAL DIAL TEST INDICATOR NO. 196.



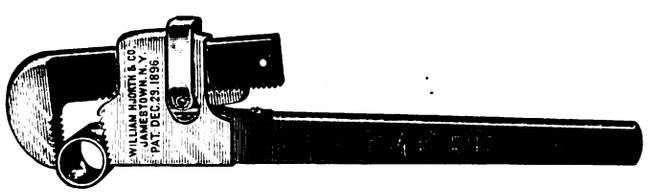
SPECIAL TOOL POST AND SLEEVE.

Digitized by Google

classes of work. The special tool post and sleeve as shown above are useful in lathe work. For general work the indicator is adapted for use with their 9 inch or 12 inch surface gauges. On lathe, planer, milling machine and in setting up machinery, this tool, it is claimed, will be thought indispensable when once used.

MAYHEW'S RIFFLER NO. 1130.

Among the many useful tools noted among the products of the H. H. Mayhew Co., Shelbourne Falls, Mass., we illustrate the Riffler No. 1130. This, while constructed under an old principle, is in a new form: a continuous spiral cutting edge enables it to cut fast and clean. This tool was



MAYHEW'S RIFFLER NO. 1130.

designed for conveniently cutting irregular shapes such as key holes, mortises, etc. Straight rifflers are made in diameters 3-16, 7-32 and ¼-inch. Sizes in 9-32, 5-16 and ⅜ are tapered and have an increase twist. They cut faster and cannot clog. What is difficult and impossible with a wood file, it is claimed, is easily accomplished with a riffler.

THE EMPIRE PIPE WRENCH.

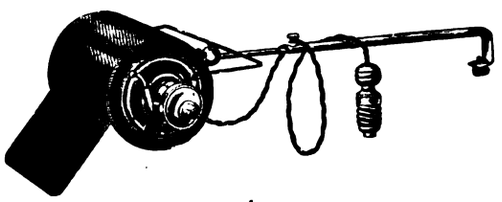
W. Hjorth & Co., Jamestown, N. Y., are placing upon the market through the Hardware and supply trade the Empire Pipe Wrench, which is one of their popular specialties, and meets with a ready sale where introduced. We illustrate it herewith. It will be noted from the illustration that it makes a nut adjustment entirely unnecessary, as it can be changed or set instantly to any size pipe, it is claimed to have double the strength of any similar wrench on the market, having an interchangeable wearing jaw it does not lock up-

THE EMPIRE PIPE WRENCH.

on the pipe as many wrenches do, but is released at once with a slight pressure of the thumb on the shaft of the movable jaw. The 14-inch wrench has the same range or opening as other 18 in. wrenches; the weight of the main jaw is almost double that of others. The Empire Wrench does not have strain in head of wrench as others have, consequently gives it greater strength. All parts are interchangeable. This wrench can be relied upon to do closer work than any other wrench on account of it having no thumb screw in the way. All wrenches guaranteed. Manufactured from dropped forged tool steel, carefully tempered and highly polished. The range of opening for the several sizes are for 10 in. 1¾ in., 14 in., 2¾ in., and 18 in., 3½ in.

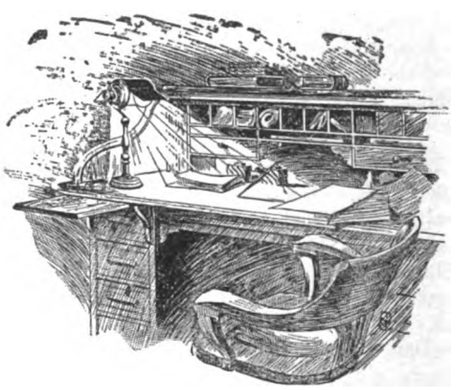
MANN'S RAZOR PASTE.

William T. Mann & Co., Cleveland, Ohio, who are makers of the Mann Perforated Razor Strop, which is fast gaining a first class reputation as an A No. 1 strop, have now placed upon the market the paste with which these strops are finished. The accompanying illustration shows the way in which the paste is packed. The finish of their strops, the company claim, cannot be surpassed. The paste is put up in small boxes that retail for ten cents each, and they argue that any dealer handling the Mann, or in fact, any strop, should sell a box of this paste with each strop, as it perserves and keeps the strop in good working condition.



PACIFIC ELECTRIC CO. SPECIALTIES.

The Pacific Electric Co., La Crosse, Wis., among the numerous articles they manufacture, offer to the trade a very convenient Lamp, which is their No. 1, which we illustrate herewith. It is admirably adapted for use on flat top desks or tables, is very adjustable, as the hood can be revolved and the light cast in any direction, taking the glare of the light from the work and the eyes. The inside of the shade is fin-



NO. 1.

ished in aluminum which softens the light, and throws a mellow light upon the work instead of the usual glare of the electric light. The height of the lamp is 13 inches,

NO. 4.

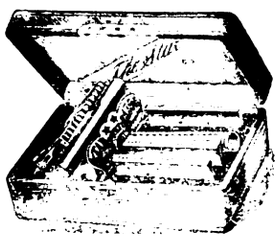
spread of shade 6 inches, weight of lamp complete, packed in pasteboard box, 2½ lbs. They have antique oak stand, nickel plated framehood, enameled green, or can be furnished with N. P. or polished brass hood. Their No. 4 lamp, which we also illustrate, is for use on roll-top desks. It will fit any

LAMP NO. 1 IN USE.

desk without interfering with the closing of the desk. Many points in this lamp have been improved in the past year, and the company state that it is now the best roll-top desk lamp on the market. It is made with polished brass trimmings, enameled green hood, or can be furnished complete polished brass. The weight of this lamp is 1½ lbs.

FISHING ROD ATTACHMENT.

It would perhaps be difficult to convince the man with the fine jointed rod, silk line and nickel plated multiplying reel that he was not having more sport than the small boy with a pole cut from the forest and an ordinary hook and line, but the boy is satisfied as long as he can catch the fish, while the scientific fisherman must keep up to date in all his fishing apparatus, from flies to pole. One of the newest things in this line, which the sportsman will not be slow in adopt-



Digitized by Google

ing, is the automatic reel arrangement which we show in the picture. It is somewhat difficult, in spite of the multiplying mechanism, to wind up the line rapidly by turning the crank, but with the reciprocating movement which this invention utilizes to revolve the reel the line can be taken in as rapidly as desired. Protecting from one side of a hollow sleeve, which forms a section of the rod, is a spindle, on which the reel is mounted. The inner end of the shaft, which carries this spindle has a gear wheel, which meshes with two others, set at right angles to the first wheel and mounted on a revolving shaft inside the sleeve by a ratchet mechanism, which permits one wheel to stand still, while the other revolves. Outside the long sleeve is a sliding handle, connected through a slot in the sleeve with the spirally threaded surface of the central rod. A movement of this handle in either direction will transmit the motion through the gear wheels, by the aid of the ratchets, to the spindle which carries the reel, and the faster the handle is reciprocated the faster the line will be drawn in. The ordinary drag and brake arrangements are utilized in paying out the line, as on the old reel.

The inventors are Allen E. Hall and William G. Smith, of Philadelphia, Pa.

THE STAR SAFETY RAZORS FOR HOLIDAY TRADE.

Kampfe Bros., No. 8-12 Reade Street, New York, are the oldest and best-known manufacturers of Safety Razors in the country. For 28 years they have made the Star Safety

"STAR" SAFETY RAZOR CASE.

Razor, being the original inventors of this particular style of Safety Razor, and by skillful workmanship and intelligent advertising, they have reached a point of excellence that receives the highest awards wherever exhibited including the

trate in this article, and the annually increasing sales of this remarkable specialty in the line of self-shaving appliances, give an indication of public approval worthy of the highest admiration.

AN EXTRAORDINARY OFFER.

The Acorn Brass Mfg. Company, Chicago, are announcing the fact that they have secured control of a lighting system for the lighting of stores, halls, gardens, churches, etc., that solves the problem of individual lighting at moderate cost. A system that will light a store 50x100 feet can be installed in less than two hours and will light the store brilliantly at a cost not to exceed 60 cents per week.

A proposition of this remarkable character is based on the

fact that they claim the simplicity of construction is such that anyone can operate the plant, as there are no complicated parts to get out of order. They state that they are willing to demonstrate to anyone interested the wonderful possibilities of their mode of lighting, and further state that they issue a little booklet describing the system.

An individual gas plant complete such as they offer at so moderate an expense should solve the problem of economical lighting, and should be a boon indeed to those perplexed over the lighting question.

THE GLUT OF "BANKRUPT STOCKS."

Complaints from retail merchants on the number of bankrupt stocks offered for sale in western towns this fall are more numerous than usual and exceedingly bitter. Prices have been demoralized in many towns and a good share of the fall trade lost to many merchants through the hunger of their customers for shoddy goods at shoddy prices.

It is natural that with this should come a demand from the regular and legitimate merchant for a law limiting the opportunities of these bankrupt stock peddlers. They complain that they are taxed to support the community and the State, and in return should be protected.

It is certain that the regular merchant is entitled to some measure of protection. He furnishes the community with credit during the long summer when it has no money. He furnishes the farmer with a market for his produce. He is one of the most heavily taxed men in the town. Why, then, should he not be protected against the transient merchant who comes to the town for a sixty days' stay and sells the people deceiving merchandise which lost most of its merit at least six years before?

This is a question which every community should answer for itself if the State neglects it. It is just that the transient merchant should pay a license, the amount to be regulated by ordinance, for every week or month he does business in the town. If he enjoys the advantages which other men's efforts have created in a community he should pay something for it. Such an ordinance cuts down the number of irresponsible transients materially.—*Exchange.*

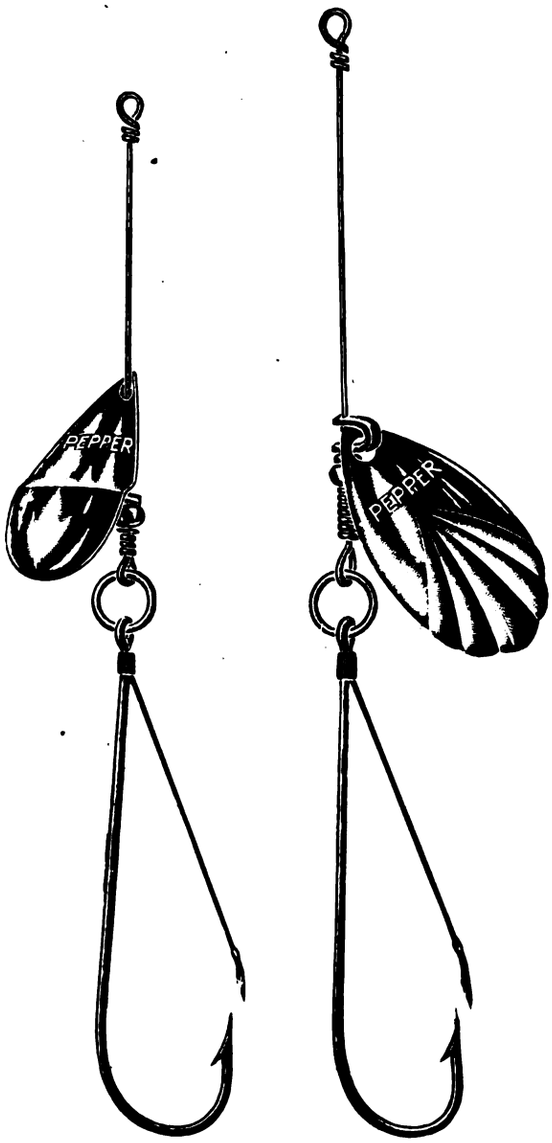
JOSEPH E. PEPPER'S NEW CATALOGUE.

JOSEPH E. PEPPER, Rome, N. Y., has recently issued his illustrated catalogue of fine fishing tackle for the jobbing trade for 1904, which embraces in its contents a large number of such specialties for the use of the angler that makes it a very desirable catalogue for those handling fishing tackle, as he illustrates a very complete line of Trolling Baits. These are all graphically illustrated exact size, and are well worthy of the attention of the trade. We illustrate herewith two of the variety to which attention should be called. Fig. 1 is the Water Witch Weedless Casting Bait, which is claimed to be used best where there is grass or lily pads. It is made in copper, nickel and brass, and also in kidney-fluted at the same price. Fig. 2 is a correct representation of the Reliance Weedless Casting Bait, also used



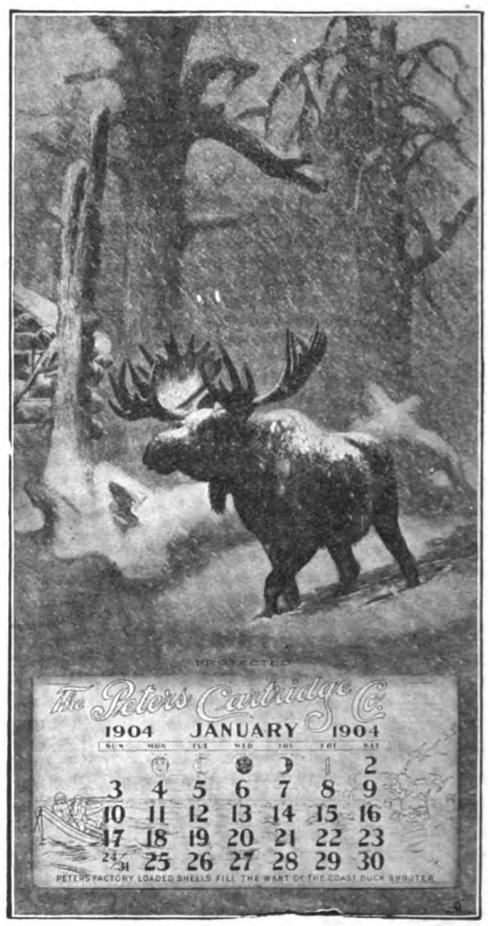


FIG. 1. FIG. 2.

similarly to the Water Witch. This is made in addition in kidney-fluted and Star patterns. They are made in copper, nickel and brass at the same price. This certainly is a catalogue that should be in the hands of those who contribute to the sports of the angler.

A UNIQUE AND ATTRACTIVE CALENDAR.

The Peters Cartridge Co., Cincinnati, O., has issued its calendar for 1904, and we have been favored with a copy which we find decidedly unique and very attractive. The main part of the calendar is made up of a picture of a grand old bull moose forging his way through a bleak forest in a driving snow storm. The snow is falling in large moist flakes, giving a remarkably picturesque look to the forest, and lodging on the back, forehead, and antlers of this king of the forest gives him a very imposing appearance. The moose occupies the center of the picture, and at the left is the deserted cabin of the hunter, covered with snow and ice, while at the foot of a near-by dead tree is an empty Peters cartridge case. The picture is entitled "Protected," from which we assume that the bull moose knows it is the close season, which influences him to range through the forest in the majestic manner shown. Attached to the calendars are the pads designating the different months, on which are some spirited sketches appropriate to the month. In January there is the coast duck shooting scene; in February, rabbit shooting; March, indoor rifle and revolver shooting; April, woodchuck shooting; May, outdoor revolver shooting; June, trap shooting; July, saluting with blank cartridges; August,

upland plover shooting; September, antelope shooting on the plains; October, field shooting; November, duck shooting; December, caribou shooting. The calendar can be procured from the trade or by application to the company at Cincinnati, Ohio, or the Eastern Branch, 98 Chambers Street, New York, accompanying the application with ten cents for postage.

VALUABLE WOODS OF THE PHILIPPINES.

America's new possessions in the Far East are constantly showing the wisdom of the acquisition of the archipelago. The value of the woods in the Philippine Islands to many branches of industry is very great, for they possess qualities unknown to our own. A correspondent of the *Modern Machinist* says that one of them is an exceedingly fine-grained, tough wood, very useful for tool handles, while another seems to be a cross between wood and iron, for it is very heavy and resistant, so much so that the natives use it for spear-heads. It can be readily worked by tools and has a metallic ring. In some cases it is wrought to shape by emery wheels. Another species is a close-grained, tough wood, which seems to be a dyewood, for when immersed it stains the water bright yellow for a long distance around it. This wood is also quite heavy and takes a fine finish. American lumbermen call it "yellow jack." Still another wood is called "balang" by the natives, and white wood by American lumbermen, but is quite different from our own wood of that name. It can only be worked by very sharp tools, but has a veined surface when finished, and is capable of taking a high polish. The business of preparing these woods for American markets is going forward with despatch and it is said to be very profitable.

HARDWARE NOTES.

EASTERN NEW ENGLAND TRADE.

(From our Traveling Correspondent).

From the back country districts of New England come good reports of Fall trade. The farmers of the East are in a better condition than for some years past. The only reports of poor trade among Hardware dealers is from those either in the large cities or in manufacturing towns.

WORCESTER TRADE.

In Worcester, Mass., one dealer told your correspondent that general trade was up to that of last year, but that the tool and mill supply trade was in a very unsatisfactory condition—that the demand for good grade of tools was very small.

The store of the Worcester Hardware Co. is well arranged and a very complete stock is carried by this concern.

Another of Worcester's progressive general Hardware dealers is H. M. Waite, who carries an exceptionally fine line of cabinet and Builders' Hardware. It has often been said that this line was difficult to use in making a good window display, but there is someone in the employ of H. M. Waite who has succeeded in making Cabinet Hardware attract attention in the window. This was done, using high class goods and having them strikingly arranged.

The old business of H. W. Miller has been succeeded to by Elwood Adams; as this store is one of the oldest Hardware establishments in Worcester, a good business is done.

At the corner of Pearl and Main Streets Duncan & Goodell's up-to-date Hardware store is located. The members of this firm are practical Hardware men, and carry on a growing business. They reported trade in a healthy but not booming condition and thought the outlook was good for Winter.

Worcester is a good tool market, due to the fact that a number of large shops and mills are located there. The tool trade is followed closely by most of the Hardware dealers. W. H. Willard & Co. make a specialty of fine machinists' tools, and devote considerable attention to window display in this line.

Not many of the Hardware dealers of Worcester handle stoves—the furniture and exclusively stove houses apparently controlling the trade. The Guy Furniture Co. carry a big line of coal, gas and oil heaters as well as stoves and ranges.

PROVIDENCE TRADE.

Belcher & Loomis, of Providence, do a good local jobbing business and have one of the most attractively arranged retail Hardware stores in Southern New England.

Although not as large a store is occupied by Bosworth & Aspinwall as that of some of the other Providence concerns, still this firm do an extensive retail trade, being located in the centre of the city. A large stock of Cabinet and Builders' Hardware and tools is carried by Bosworth & Aspinwall.

There is an air of prosperity about the store of the Union Hardware & Electrical Supply Co. A very complete line of all electrical goods are carried and the line is found a good one to push in connection with a regular Hardware trade.

Another Providence concern doing no small amount of jobbing business in connection with retailing of Hardware is Barker, Chadsey & Co.

E. T. George conducts an exclusively retail business and by close attention to customers' wants has succeeded in building up a good trade.

Another of Providence's up-to-date retail Hardware stores is W. Congdon & Sons, who made no complaint of trade conditions.

SELLS STOVES.

But few of the Hardware men in the State handle stoves, and in commenting on this fact one dealer said: "Until four years ago I did not sell stoves. During the big bicycle years I sold a lot of wheels. The bicycle business began to wane and I plainly saw that some other line must be added. I noticed that few of my competitors were selling stoves, that the line was mostly being handled by regular stove men. But as I had made money in the wheel business—and never rode one—I decided that I could make money on stoves. We accordingly closed out bicycles in 1899 with a big rush, and put in a stock of stoves and ranges. At first the sales were slow and people through the Summer still talked bicycles—and I was almost inclined to think that a mistake had been made in throwing out the one and putting in the other line. However, we had stoves and not bicycles to sell, so advertised stoves, talked stoves and very soon we were selling stoves. Since the end of the first eight months of putting in the line we have never regretted having taken up stoves. The Hardware is the store for stoves, and stoves are a good paying line for the Hardware store."

FITCHBURG.

The consolidation which took place last Spring in Fitchburg, Mass., of the three leading Hardware stores has been a success. The new concern, the Fitchburg Hardware Co., is owned and controlled by the same men who had succeeded in building up the three old concerns, and because of the additional strength gained by consolidation the Fitchburg Hardware Co. will constantly become more of a power in the wholesale trade of New England.

LYNN.

A growing Massachusetts concern and one doing a large business is the Brockway-Smith Corporation, of Lynn. Considerable wholesale business is done by this company, especially in building materials, the sash, door and blind trade being followed up closely as well as Builders' Hardware and mill supplies.

A very nicely arranged and well stocked store is that of W. Henry Hutchinson, of Lynn. In addition to general Hardware, including paints and oils, sporting goods and cutlery, W. Henry Hutchinson carries a very large and up-to-date line of crockery and glass ware. This line is artisically displayed in the basement, with a large double staircase leading in from the front part of the store. Mr. Hutchinson said that in regular staple and medium priced goods business was good, but that for high priced goods Lynn was a poor market, and that the Hardwareman had Boston competition always to meet. Judging from some prices your correspondent saw at which goods were being retailed in Lynn, it would seem that prices were lower than in Boston, and from the very complete stocks carried by the three leading concerns there would apparently be no use for a Lynn person going to Boston for anything in this line.

Another leading retailer of Lynn is J. W. Harding & Co., where also a very large stock is carried. An exceedingly attractive window display was recently made by Harding & Co. of sporting goods, which line is constantly growing in sales through the channels of the Hardware trade.

CHRISTMAS GOODS.

During the past few years many New England Hardware men have gradually enlarged their line of holiday goods, adding fine cutlery and carving sets, chafing dishes, then flat ware and plated hollow ware, and now fine sterling silver and cut glass can be found in many of the up-to-date Eastern Hardware stores. In referring to this line a New England Hardware man said: "We have found it profitable and pleasant to handle. It adds much to attractiveness of our stores, brings us more business and new customers. With proper attention it will bring good returns and will add to profits without materially increasing fixed charges. As business is gradually being done on smaller margin of profits it becomes necessary to increase total sales, and this line is a good one to help do that."

HAMMERNAIL.

LIVINGSTON NAIL COMPANY.

Arrangements have been made by which the incorporation of the business of the Livingston Nail Company in January next will be accomplished with ample cash capital. The business so long conducted by the late S. Otis Livingston, and of which he was the proprietor, will be taken over as of November 1st, 1903. The same name will be used, and the business transacted from the same address, and by the same force as formerly. The officers of the new company will be: Duncan K. Major, New York, president and treasurer; George B. Olney, Pawtucket, R. I., (president of the Coleman Nail Co.), vice-president; W. L. Cooper, New York, secretary; and Fred P. Oliver, assistant treasurer. The estate of Mr. Livingston leaves the present capital in the business.

A CORKSCREW FACTORY ON A NEW HAMPSHIRE FARM.

"Can't find the corkscrew!"

This remark startled a party of campers among New Hampshire hills, for everybody knows that a corkscrew is one of the very necessary articles to a camping party.

"Never mind," said the guide, "we'll have some made." So he got a buckboard, and surprised the campers by starting for a corkscrew factory in New Hampshire hills, and the only shop of its kind in the country, too. A lively drive over mountain roads brought the party to an old New Hampshire farm on the outskirts of the village of Alton, and a little, weather-beaten one-story shop several miles from the railroad, it was located in the place of the usual barn. The old oaken bucket hung in a well beneath an elm tree. A sheep bleated a greeting, and the factory superintendent stood in the doorway of the shop, and pleasantly welcomed his visitors. In this quaint little shop, situated and managed in the midst of rustic beauty and artistic expression that would delight a Roycrofter, it is claimed all the machine-made corkscrews of this country are produced, a half-ton of wire being daily converted into corkscrews to pull the stoppers of the world.

Ten ingenious machines, each a little bigger than a sewing machine, do all the work, and a half-dozen men and girls feed their hungry jaws with sufficient wire and pack for shipment their finished product. The wire, on spools, is fed into the machine much as thread is run into a sewing machine. Swiftly, a sharp knife cuts off; leaving a sharp bevelled edge, a piece of wire the desired length for the corkscrew, and just as quickly a revolving core catches the ends of the wire, twists it around a fixed post, and then twirls it into the mould of the core into the crooks of the corkscrew. Then the machine ejects the wire, a finished corkscrew. The bevelled edge is the sharp point of the screw, and the ring, for the pulling finger, was made by the loop around the post.

All day these little machines are busily working, and all night, too, if necessary to fill orders. Each one of them is capable of making 150 gross of corkscrews a day. With slight manipulation they will make any size corkscrew desired, a change of wire and of the mould of the core being alone necessary to make the finished corkscrew greater or smaller. Some of the machines spin the corkscrews on wooden or tin handles, perhaps with an advertisement of a medicine stamped upon them. Twenty-five thousand gross, or 3,600,000 small corkscrews are taken every year by a Western medicine manufacturer. Forty bushels in bulk of large corkscrews were being packed for shipment to Germany the day the campers visited the factory.

The ingenious machines are working in interest of the brains and as the energetic ally of Rockwell Clough, who might be called "The Corkscrew King," were he not too patriotic a native of rock-ribbed New Hampshire to care for such empty honors. Rockwell Clough, is however, a Yankee genius. He made corkscrews by hand in New Jersey, as they still do there to-day, and eventually worked out his ideas for the ingenious machines that do the work to-day. When he got his machines perfected, he went back to the old Clough homestead, high up on the hills of New Hampshire and in the village of Alton, and he set up his machines in the barn. For years, nobody was allowed inside the factory, securely guarding the patents on the machines, as they were of great value. Mr. Clough to-day claims to control all patents of corkscrew making machines in this country, and in most of the countries of Europe. He is now at the age of three score years, and is contentedly enjoying life, either at the old homestead or in travelling, while his machines spin out corkscrews for the multitudinous public and dollars for himself.

The superintendent generously gave the visiting campers corkscrews of many styles and sizes for souvenirs, and for use. The campers, having registered their names on the factory visitors' book, drank from the old oaken bucket, petted the sheep, bade the genial superintendent goodby, and whirled down the mountain road in the springy buckboard, and sped back to camp with the corkscrew. F. A. G.

HARDWARE PATENTS.

The following list of Patents, Trade Marks and Designs of interest to the Hardware trade are furnished by Davis & Davis, Solicitor of American and Foreign Patents, Washington, D. C., and St. Paul Building, New York City.

PATENTS EXPIRED NOV. 23, 1903.

352,926. FISHING REEL DRAG, A. F. Meisselback, Newark, N. J.
352,932. WEATHER STRIP, C. Polley, New Berlin, Fla.
352,937. SAW HANDLE, George E. Seibler, Dayton, Ohio.
352,972. AXE, J. Q. Everson, Pittsburg, Pa.
352,975. SAD IRON, O. R. Hanchett, Erie, Pa.
353,022. BAIT BOX, E. W. Deland, Saco, Me.
353,198. PAIL, ETC., A. Brake, Toronto, Ontario, Canada.

PATENTS ISSUED NOV. 24, 1903.

744,709. DOOR CLOSER & CHECK, J. Bardsley, Montclair, and A. J. Rosentreter, Boonton, N. J.
744,737. HINGE FOR BARREL COVERS, R. H. Fesperman, Tulsa, Ind. Ter.
744,755. SASH FASTENER, E. W. Gaskenpflug, East Cleveland, Ohio.
744,784. BRUSH OR BROOM, S. M. Musgrave, Bells, Tenn.
744,821. COMBINATION STEP LADDER AND IRONING BOARD, J. W. Treen, Jersey City, N. J.
745,142. LIFTING JACK, A. R. Bolin and J. B. Goff, Dordele, Ga.

PATENTS EXPIRED NOV. 30, 1903.

353,280. STEAM COFFEE POT, A. M. Amos, Buffalo, N. Y.
353,283. WASHBOARD PROTECTOR, C. J. Bonsfield, South Bay City, Mich.
353,294. CARPET SWEEPER, W. J. Drew, Grand Rapids, Mich.
353,299. WHEELBARROW, J. P. Enderes, Pimento, Ind.
353,315. STEP LADDER CHAIR, F. E. Levanseler, St. Cloud, Minn.
353,340. HOSE REEL CARRIAGE, W. B. Wilcox, Chicago, Ill.
353,343. TUBULAR LANTERN, W. C. Winfield, Warren, O.
353,375. SASH LOCK, H. F. Peck, Fort Worth, Tex.
353,447. AXE, N. Goodier, Dardenelle, Ark.
353,483. MEAT CUTTER, P. Diessler, Philadelphia, Pa.

PATENTS ISSUED DEC. 1, 1903.

745,320. EXTENSION STEP LADDER, H. E. Bruno, St. Louis, Mo.
745,405. PAINT BRUSH, E. Vegiard dit Labonte, Montreal, Canada.
745,437. FISH HOOK, L. J. Hise, Waldron, Ark.
745,617. CLOTHES PIN, J. G. Howard, Pleasant View, Utah.
745,716. DOOR HANGER, A. F. Coulter, Pittsburg, Pa.
745,751. FISH HOOK ATTACHING DEVICE, C. A. Abbath, Quincy, Ill.
745,923. ROLLING PIN, W. L. Stanley, Cambridge, Ohio.

A NEW BUILDING MATERIAL.

Bricks are being made in England of clean sand and ground quicklime. They are said to be as substantial as granite, and to cost only $2.50 per 1,000. The inventor of the process for making them, L. P. Ford, Gresford, Eng., states that the ingredients are mixed in proper proportions mechanically and forced by a screw into a mold formed of a very strong steel cylinder. After the mold is filled it is placed in a box and the air it contains is sucked out by an air pump. Hot water is then admitted. The water rushes into every minute space and sets the particles of lime to slacking. The lime swells and causes a great pressure in the mold, while at the same time an intense heat is produced. Under the influence of the heat and pressure the sand and lime are molded into a rock which has 660 per cent. as much strength as the hardest granite. It is ready for use in eight hours. The secret of Mr. Ford's success is said to lie in his use of a cylinder mold. Others who tried to make silicate of lime building stone used square molds. They did not get an even distribution of the internal and external strains, and the stone produced was full of cracks.

Digitized by Google

ON INCREASING BUSINESS.

By Lyle Merton.

The progressive merchant is constantly on the lookout for new methods to increase his volume of sales. Necessity compels him to do this, for the forces against which he contends are continually being exerted to deprive him of his custom already gained. Among them might be mentioned that beyond the control of the most systematically managed firm there will always be a customer now and then to take offense and will buy elsewhere; men in business sometimes die and their stores are closed up by the executors, and from one reason or another the regular customers of the house are continually dropping out here and there.

To offset this shrinkage effort must be made to gain new customers or to sell our present customers more goods than we have done in the past. It is well to scan the present field of our mercantile operations and try and discover some unproductive corner where we have so far been unable to plant the seed or gather the harvest. The ability to discover such may not be difficult, but how to induce our little seeds to take root in the hard and stony ground mayhap or prevent the enemy from sowing his tares in our wheat,—that is the question.

ADDING NEW LINES.

In looking over the stock and by comparison with goods advertised in the Hardware journals it may be found that there may be some new goods which may with profit be added to the present stock. There are always specialties and novelties being brought before the public, and the Hardware dealer should always be on the alert to take them up if he thinks they will sell. Whether they will or not is a question difficult to decide. While some of them do not, again others have a large sale for a short time and then drop out. In handling a novelty it is always well to push it vigorously when first introduced and just as soon as its popularity begins to wane, to direct the salesmen's attention to something later put on the market. If novelties are carefully handled and not carried too long there is money in them as they are generally sold at a fair profit and they advertise the firm handling them and impress the trade generally with the fact that such a house is up-to-date.

Almost every house has its confirmed channels of distribution, a regular line of customers regularly visited by the salesmen. Now there may be others in the same town handling partial lines which may not be visited by our salesmen at all. They have been so accustomed to visit their old friends that they often overlook the fact that a customer for a special line may be in the same town. They may be in the habit of visiting only the stores in a town when a woodworking factory or a mill may be large consumers of some lines of Hardware and be entirely overlooked. Salesmen, like other mortals, have the faculty of getting into a rut and it is well for the manager to consider this point well and talk it over with his traveling men to see if the visiting list may not be enlarged. A new customer gained in this way here and there helps to swell the general volume of business.

Another means of extending trade is the employment of special salesmen to visit a certain class of trade. The regular salesmen of a Hardware house has so many lines to carry and so many seasonable goods which he must of necessity sell that very often he is unable to give as much attention as he should to special lines carried by the house. These special lines can with advantage often be sold by a special salesman who may cover the territory of one or even several travelers and thus visit men whom the regular salesman does not call upon or may sell specialties to the regular trade canvassed by the regular salesman.

Still another method of enlargement of the jobbing business is the establishment of branches in different sections. There may not be many openings for small stores as usually the field is pretty well covered. But now and then towns may be found where there are openings for trade in the Hardware line. Why not open a retail store here for the sale of our goods? No doubt in the parent house a young man may be found who would consider it a good chance to demonstrate his executive ability by the management of just such a branch establishment, with the prospect of a share in the profits if successful or perhaps ultimate ownership. Although we have never seen this scheme put into actual operation we are inclined to think it entirely practical and one that would work to the benefit of both employer and employed. It would open up an avenue of advancement to the young Hardware clerk and stimulate him to extra effort if he had any ambitions in the direction of being a proprietor.

A branch establishment would be enabled to sell goods as low as any competitor in the retail trade and the manager would have the backing and advice and assistance of the home office. He would do his best to make it a success and would know that should he not be successful in a year or two he could rely upon his principals for encouragement and definite instructions and that his position would be given him should the venture not prove remunerative. This fact alone would have much to do with his success.

In addition to all the former methods, direct appeal to the trade must be persistently made if we would hold our own. No better means of giving trade facts and advertising our business is than regularly having postal cards printed with some item of store news and mailed direct to our customers and those not our customers. The expense is not large and if regularly and systematically carried results will be apparent.

MUTUAL FIRE INSURANCE MAKES GOOD SHOWING.

The statement of the Retail Hardware Dealers' Mutual Fire Insurance Co. of Minnesota, issued under date of Nov. 1, 1903, shows that organization to be in excellent condition. This report is as follows:

	Gross Premiums.	*Gross Losses.*
1900	$8,390.91	$1,294.14—15 %
1901	12,573.61	2,344.98—18 %
1902	19,708.03	7,752.22—39 %
1903*	26,421.34	5,153.89—19½%
Total	$67,093.89	$16,545.23

*10 months to date.

	Gross Expense.	*Losses and Expense.*
1900	$2,196.61—26%	41%
1901	1,769.27—15%	33%
1902	2,436.40—12%	51%
1903	2,815.94—10½%	30%
Total	$9,218.22	

Total premius, $67,093.89.
Total losses, $16,545.23—24%.
Total expense, $9,218.22—14%.
Total losses and expense, $25,763.45—38%.

HOW MARBLES ARE MADE.

In About Fifteen Minutes a Bushel Can be Turned Out.

Almost all the "marbles" with which boys amuse themselves in season and out of season, on pavements and in shady spots, are made at Oberstein, Germany, says the *Cornhill Magazine*.

There are many large agate quarries and mills in that neighborhood, and the refuse is turned to good account in providing the small stone balls for experts to "knuckle down" with.

The stone is broken into small cubes by blows of a light hammer. These small blocks of stone are thrown by the shovelful into the hopper of a small mill, formed of a bedstone having its surface grooved with concentric furrows; above this is a "runner," which is of hard wood, having a level face on its lower surface.

The upper block is made to revolve rapidly, water being delivered upon the grooves of the bedstone where the marbles are being rounded. It takes about fifteen minutes to finish a bushel of good marbles ready for the boy's knuckles. One mill will turn out 160,000 per week.

NEW U. M. C. PRODUCTS.

The 32 Automatic Colt Pistol is loaded with a special high power smokeless powder, giving high velocity and operating freely through the mechanism of the automatic Colt pistol (pocket model). Those with the soft point bullets will be found desirable for sporting purposes.

These cartridges are also made with metal cased bullets and are accurate for target purposes at ranges suitable to pocket pistols.

RIM FIRE CARTRIDGES.

New 22 short ungreased, 22 long ungreased and 22 Winchester ungreased are inexpensive rim fire cartridges loaded with the best grade of smokeless powder. Boys are calling for these cartridges as they can be carried loose in the pocket without the old inconvenience of the greased cartridges. They will not lead the gun.

U. M. C. ammunition shoots well in any make gun.

GREAT DEMAND FOR RUBBER.

To Meet It Europe is Ransacked For Cast-off Rubber Manufactures to be Made Over.

Washington, Nov. 11.—More than 50,000,000 pounds of India rubber, valued at more than $30,000,000, was imported into the United States last year. In 1890 the quantity was only 33,000,000 pounds; in 1880, 16,000,000; in 1870, 9,000,000, and in 1862, the earliest date at which it was separately shown in the import statements, was only 2,125,561 pounds.

Over $100,000,000 worth of manufactures from India rubber are now turned out from the factories of the country every year, and about half of this total is in the form of boots and shoes.

So great is the demand for India rubber for use in manufacturing that not only has the importation grown from 2,000,000 pounds in 1862 to over 50,000,000 annually at the present period, but in addition to this the forests of the East Indies are called upon for several million pounds annually of a new substitute for gutterpercha, known as "gutta-joolatong," while at the same time the highways and byways of Europe and other countries are ransacked for cast-off rubber manufactures from which the rubber is "reclaimed" and reused in conjunction with the new rubber from the forests of Brazil, Africa and the East Indies.

Figures just compiled by the Department of Commerce and Labor through its Bureau of Statistics show the importations of three classes of material utilized as India rubber in recent years.

They show that during the past few years the importations of crude rubber have ranged from 50,000,000 to 55,000,000 pounds, of gutta-joolatong from 5,000,000 to 15,000,000, and of "old and scrap rubber, fit only for remanufacture," from 10 to 20 odd million pounds per annum and of gutta percha a half million pounds.

The industry of importing and "reclaiming" India rubber for reuse in manufacturing is a comparatively new one, and while it utilizes large quantities of worn-out rubber boots and shoes and other articles of this character from the scrap heaps of the United States, it has only extended to other parts of the world in recent years.

In 1893, for example, the total importation of "old and scrap India rubber fit only for remanufacture" was less than a million pounds. In 1896 it was over three millions. In 1898 more than nine millions, in 1900 nineteen millions, in 1902 twenty-two millions and in 1903 24,659,394 pounds, valued at $1,516,137.

Gutta-joolatong is another comparatively new material which may be utilized as a substitute for or in conjunction with India rubber.

It is a product of the East Indies, chiefly the island of Borneo, located not far from our Philippines, and in the form of which it is imported is described as "whitish in color, looking something like marshmallow candy, smelling strongly of petroleum, and oxidizing on exposure to the air, becoming hard." The same description says: "It is not a substitute for gutta-percha or India rubber, but it is used chiefly as a filler in manufactures of India rubber gum and gutta-percha.

The importation of this newly developed aid in the manufacture of India rubber has increased from 6,500,000 pounds in 1899 to 14,000,000 pounds in 1903.

TRADE NOTES.

Syracuse, N. Y.—William Van Wagoner, formerly superintendent of the Barnes Cycle Company, and later manager of the Century Motor Vehicle Company, has gone with the Kirk-Snell Companies, Toledo, in the capacity of superintendent. Since the consolidation of the two companies, there has been a good deal of shifting about—E. P. Breckinridge becoming manager of works, Ezra E. Kirk continuing as sales manager of the automobile department, the nameplate bicycle business and the stove trimmings department, while J. R. B. Ransom in addition to his general duties will direct the sales of jobbing bicycles, Hussey bars and drop forging.

REVIEW OF THE MARKETS.

WIRE NAILS. There is a fair business being done, although the orders do not represent large requirements, being extremely moderate if anything, but at this period little else is expected. The market under the circumstances, is firm at the following quotations: f.o.b. Pittsburgh, 60 days, or 2 per cent. discount for cash in 10 days:

Jobbers, carload lots	$2.00
Retailers, carload lots	2.05
Retailers, less than carload lots	2.15

New York. A very limited demand characterizes the local trade. Quotations are steady at the following:

Single carloads	$2.20
Small lots from store	$2.25 to $2.30

CUT NAILS. Under a moderate demand the market is firm at the following quotations:

In carload lots	$1.90 base
Less than carload lots	$1.95

f.o.b. Pittsburgh, plus freight in Tube Rate Book to point of destination; terms, 60 days, less 2 per cent. off in 10 days.

New York. Small lots from store represents the condition of local trade, which is a steady demand on that basis. Quotations are as follows:

Carloads on dock	$2.04½
Less than carloads on dock	2.12½
Small lots from store	2.20

BARB WIRE. A light business is reported as being the feature of the market, orders being for limited quantities for immediate wants. Quotations are as follows: f.o.b. Pittsburgh, 60 days, or 2 per cent. discount for cash in 10 days:

	Painted.	Galv.
Jobbers, carload lots	$2.30	$2.60
Retailers, carload lots	2.35	2.65
Retailers, less than carload lots	2.45	2.75

SMOOTH FENCE WIRE. This end of the Wire traffic is kept up under a fairly good demand, contracts being freely drawn upon for regular requirements which have been satisfactory for the season. While some slight concessions are referred to, the official prices remain as previously quoted, as follows: f.o.b. Pittsburgh, terms 60 days, or 2 per cent. discount for cash in 10 days:

Jobbers, carloads	$1.90
Retailers, carloads	1.95
Less than carloads	2.05

The above prices are for base numbers, 6 to 9. The other numbers of Plain and Galvanized Wire take the usual advances, as follows:

		Plain.	Galv.
6 to 9		Base.	$0.30
10	Advance over base	$0.10	.30
11	" " "	.10	.30
12 and 12½	" " "	.15	.30
13	" " "	.25	.30
14	" " "	.35	.30
15	" " "	.45	.60
16	" " "	.55	.60
17	" " "	.70	1.00

SAND PAPER, ETC. The manufacturers of Flint and Emery Paper and Cloth have adopted a revised list, which went into effect November 23. The revised list prices are subject to the same discounts as the former lists, which in a general way may be referred to as follows: Flint and Emery Paper and Cloth in reams or rolls, discount from 50 and 10 to 60 per cent.; Garnet Paper and Cloth in reams or rolls, discount, 25 per cent.

SHEET ZINC. Another reduction in the price of Sheet Zinc is announced under date November 27 by Matthiessen & Hegeler Zinc Company, La Salle, Ill. The price is now $5.75 per 100 pounds in 600-pound casks, subject to the usual discounts in quantities.

CORDAGE. The demand for Rope continues fairly steady with but little change in quotations for the higher grades. As there is considerable demand for Rope at lower quotations, the manufacturers meet it by making suitable grade for price, while rules at ½-cent to one cent per pound below that of Pure Manila. The following quotations represent the market:

Pure Manila, 7-16 inch and larger	12
⅜ inch	12½
¼ inch and 5-16	13
Pure Sisal, 7-16 inch and larger	9½
No. 2 Sisal, 7-16 inch and larger	8½
⅜ inch	9
¼ inch and 5-16 inch	9½
Lath Yarn, Medium and Coarse	8¾
Jute Rope, No. 1	6½
No. 2	6

LINSEED OIL. The following quotations on "City" Raw Oil are the latest announced by the Dean Linseed Oil Co.:

In lots of less than 5 barrels...38 cents per gallon.
In lots of 5 barrels or more....37 cents per gallon.

The "American" brand for respective quantities, 1 cent per gallon less.

The five barrel price applies only to deliveries of that quantity at one time.

Boiled Linseed Oil, 2 cents per gallon higher than Raw.
Calcutta Oil .....65 cents per gallon.

THE GRAPHITE TRADE.

So far as the graphite industry is concerned, there seems to be absolutely nothing new that we can say on the subject. It is true that with the coming in of December, the usual letting-up of orders is noticed, but the prospect for the new year seems to be quite as good as it was December a year ago. The fact that we have very lately bought quite a large plot of ground adjoining our factory, and are now about to begin the building of a structure 100x54 feet and six stories high, and are also enlarging our power plant building, so as to install another unit of 300 H. P., shows that we have faith in the continuance of prosperous days.

JOSEPH DIXON CRUCIBLE CO.

THE PHILADELPHIA TRADE.

Winter has begun with unusual severity, and while we do not claim to be the "oldest inhabitants," it has been some years since we have seen skating at Thanksgiving and a heavy fall of snow early in December. This has made a lively demand for Winter goods. The market is practically bare of Snow Shovels and Sleds, and Weather Strips, Skates, and Sleigh Bells are in demand. It is very gratifying to the jobbing trade to see that their retail friends who carried over so many Skates last year now have an excellent opportunity to work off their stocks, and, of course, the jobbers hope to reap the benefit of this. On other lines trade is continuing in fair volume, and the demand for goods is quite active, while prices appear practically unchanged, except on a few lines near the raw material, and some advances are still being reported. The cotton market is exceptionally strong, and the South of course feels good over 12-cent cotton which is almost an unheard of price; and cotton cord and all goods made of cotton are higher in consequence. Holiday trade is now in order and with the unusual weather conditions there seems to be no reason why the country should not enjoy a most satisfactory holiday season, which is always especially welcome as it brings a large amount of cash into the hands of the retailers.

BIDDLE HARDWARE CO.

Digitized by Google

THE PITTSBURGH TRADE.

We have had an early touch of winter lasting about two weeks, which has stimulated the sale of winter goods. Gas stoves are in especial demand throughout the territory favored with natural gas. The improvements in these stoves in efficiency is quite marked in comparison with the wasteful methods of using gas some years ago. There is no fuel for domestic purposes equal to it, both for convenience and efficiency. Skates, guns and cutlery are also in good demand and the holiday trade is beginning to show itself. While there is a lull in the steel and iron market, there is still a good business doing the amount of which a few years ago would have taxed the capacity of the mills of that time. The waiting purchasers cannot wait indefinitely and we look for our mills to be fairly busy after the turn of the year. Prices of heavy goods will by that time have been adjusted to new conditions, wage scales arranged and the prosperous conditions in the west and south will compel buyers to come into the market. LOGAN-GREGG HARDWARE CO.

THE CLEVELAND TRADE.

It seems to be manifest destiny that we keep going west until we come full circle, as a continent is not broad enough for a resting place for Uncle Sam. The Indian Hunting grounds have been converted into wheat fields, and now the Panama Banana Patches are to be dug up for a canal, that our navy can get through to visit our new possessions. We must hustle to make room for our Rockefellers and Morgans or there will be nothing left for them to gobble. In the meantime the little fellows never had such a chance, they are only small by comparison, and compared with any other age or nation, they are living sumptuously. Inequality is a benefit, it is what we are all striving to make, but the difference may be a little too wide for comfortable acquiescence. November, as a business month, is fully equal to the same month in 1902, and as that was in the boom, it is quite satisfactory. Business seems to be steadily improving rather than weakening, and this is ground for hope and courage.

THE LOCKWOOD-TAYLOR HARDWARE CO.

THE CINCINNATI TRADE.

Trade is keeping up so remarkably that the traveling salesmen are out two weeks longer than usual, but as reported last month, sales are for only actual needs. Stock taking has been delayed on account of salesmen being out, but the jobbers will all be through by Christmas. Stock is being estimated at prevailing prices, no change being made except in Wire and Nails. The prevalent feeling among the jobbers is that next year will be an unusually good one for a presidential year, for the reason that orders have been small and stocks well cleaned up, so much so that dealers will want goods quick; the jobbers will not have enough stock to supply the demand and the manufacturers will be rushed to their fullest capacities. Christmas goods are meeting with ready demand, fancy carving sets and cutlery, fire sets, guns, sleds and skates the jobbers say are exceedingly lively. The Pickering Hardware Co. are offering for their weekly special sale, which began on the 7th inst., one thousand dozen of shears which were closed out by R. Heinisch Sons, manufacturers, at about half value.

THE OMAHA TRADE.

Trade as is customary at this time of the year is somewhat reduced in volume, though exhibiting a good deal of activity in the way of sorting up orders. The demand for season goods, such as skates, sleds, stove boards and sheet iron goods is fully up to the average and general trade is not below that of last year except in the line of heavy staples, which was unusually heavy a year ago on account of freight conditions which do not exist at present. All indications point to the fact that stocks in the hands of dealers are unusually light as orders for staple goods are small and frequent. Purchasing power of the community was never better than at present, and there seems to be no reason why the opening of the new year should not bring a larger volume of business than a year ago, for stocks are in such shape that any demand from the consumer will have its immediate effect on the retailer, jobber and manufacturer.

MANUFACTURERS OF
FILES AND RASPS
NICHOLSON, KEARNEY & FOOT, ARCADE, AMERICAN, GREAT WESTERN, McCLELLAN, EAGLE, J. B. SMITH, "X. F.", GOLD MEDAL.

THE DAVENPORT TRADE.

The annual inventories will not show as much decline as will the common stock in some of the concerns that manufacture Hardware. The I. & I. Interurban Electric Line between Davenport and Clinton is being constructed rapidly; trains will be running as far as Bettendorf very soon. Hogs are worth about four cents; bacon twenty-two cents per pound; moral: farmers should convert hogs into hams and bacon before selling. By the way, meat competition will not be so swift in future; it has been decided that there armour dealers here than is necessary, but there will still be a cudahay for every steer that arrives. While the manufacturers have announced no change in price of nails, many Iowa jobbers have reduced their price five cents per keg. The National Hardware convention was a success in every way. The officers deserve thanks and congratulations. The stockholders in one large manufacturing incorporation have been hit hard by the decline; it is said there are ninety thousand of them and that they do not all live in Wall Street. Money is not so plentiful and interest rates are higher. Collections only fair. SICKELS, PRESTON & NUTTING CO.

ATKINS SAWS ON THE PACIFIC COAST.

The popularity and growing demand for Atkins celebrated Saws is shown in a marked degree in the development of the trade on these saws out on the Pacific Coast. About four years ago E. C. Atkins & Co., the well-known Saw manufacturers of Indianapolis, established a branch house at Portland, Ore., which, in this short time has grown to such immense proportions as to necessitate the opening of an auxiliary branch to aid in more properly caring for their rapidly increasing trade. The new branch has been established at Seattle, Wash., with A. H. Potter in charge. Mr. Potter is one of the best known travelers with the Hardware and saw mill trade of the Southeastern Atlantic Coast States, where he represented the Atkins Company for the past twelve years, with headquarters at Norfolk, Va. His genial and energetic disposition, together with a thorough knowledge of the requirements of the saw mill trade and an unbounded faith in the superiority of the Atkins Saws, insures his success in his new field beyond a question. In the territory formerly traveled by him, Mr. Potter has been succeeded by G. R. Stafford, a young man whose sterling integrity and ability have won for him an enviable place in the estimation of his employers. Mr. Stafford "grew up" in the Saw business. He started as a boy with the Atkins people about ten years ago at their branch at Chattanooga, since removed to Atlanta, Ga. He knows "Saws" from start to finish and at the slightest provocation will discourse upon the merits of his line. Mr. Stafford has made his initial trip over his territory and is highly gratified at the results accomplished.

THE FOREIGN TRADE ASSOCIATION OF AMERICA.

The Foreign Trade Association of America is an organization recently incorporated as a Board of Trade under the membership corporation laws of the State of New York for the purpose of fostering foreign business of the United States in its broadest sense. It is the only organization of the kind which devotes its efforts solely to the welfare of the foreign trade of America without charge to its members.

Its members are from among the leading manufacturers of the United States, representing an aggregate capitalization of between $200,000,000 and $300,000,000. While it is a young organization, it numbers among its members representatives of the following houses:

NEW YORK.

F. W. Devoe-C. T. Raynolds Co.; J. L. Mott Iron Works; T. N. Motley Co., Inc.; Augustin Fuller Co.; General Chemical Co.; Russell & Erwin Mfg. Co.; Longman & Martinez; Wm. L. Gilbert Clock Co.; Jandus Electric Co.; H. B. Hollins & Co.; J. A. Roebling Sons & Co.; C. S. Trench & Co.; American Elec. & Novelty Mfg. Co.; Berlin Construction Co.; James B. Clow & Sons; Rumsey Pump & Mac. Co.; Bishop & Babcock Co.; R. R. Fogel & Co.; Browne & Frothingham; R. E. Dietz Co.; Everett, Heaney & Co.; S. E. Heymann & Co.; Stanley Jordan & Co.; W. M. Sheehan & Co.; Fiske Bros. Refining Co.; H. Kohnstamm & Co.; The Stirling Co.; B. Lissberger & Co.; John Lucas & Co.; The American Laundry Mac. Co.; Chas. E. McInnes & Co.; E. P. Morris Co.; Wolff & Peniston; James Edward Pope; Max Dreyfus & Co.; Ramapo Iron Works; Ducker Co.; International Cutlery Co.; Barrett Mfg. Co.; J. Jones & Son; Wm. A. Force & Co.; Cook & Bernheimer; Bell & Caldwell; New York & Java Trading Co.; F. H. Lovell & Co.; H. Walkan & Co.; One Minute Churn Co.

Aurora Tool Works, Aurora, Ind; Geo. L. Squire Mfg. Co., Buffalo, N. Y.; Buffalo Forge Co., Buffalo, N. Y.; A. Leschen & Sons Rope Co., St. Louis, Mo.; Blacklock Foundry, South Pittsburg, Tenn.; American Iron & Steel Mfg. Co., Labanon, Pa.; Murphy Varnish Co., Newark, N. J.; Standard Sanitary Co., Pittsburg, Pa.; Acme Mfg. Co., Plantsville, Conn.; Lamson & Goodnow Mfg. Co., Shelbourne Falls, Mass.; Electro Chemical Engr'g Co., Brooklyn, N. Y.; United States Paper Export Association, Philadelphia, Pa.; Union Steam Pump Co., Battle Creek, Mich.; Pyrogranit Co., New Brunswick, N. J.

The German press, in commenting on the sewing-machine trade in Japan, points out that the importation of American sewing machines into Japan has increased elevenfold over that of Germany since 1893, although the American machines command much higher prices than those made in Germany. The reason for this is said to be good management of American companies in their business methods, such as establishing depots and agencies all over Japan, keeping branches, where all parts of the machines can be obtained in the chief business centers; selling on the instalment plan to private persons and sending salesmen to every town and village.

STANLEY RULE & LEVEL CO.

NEW BRITAIN, CONN., U. S. A.

Improved Carpenters' Tools.

SOLD BY ALL HARDWARE DEALERS.

ADDITIONAL LINES FOR HARDWARE DEALERS.

One of the changes taking place in the Hardware trade of the Northwest is the growing number of Hardware men handling furniture, observes *Hardware Trade*. As a companion business it offers a good many attractions to the dealer and the lines are closely allied in many directions. Take housefurnishings; the Hardware man contributes the stove, the kitchen utensils, carpet tacks and curtain fixtures sometimes, and it is but a short step to chairs, tables, beds and other pieces of furniture. Furniture conditions throughout the country are improving slowly but surely. The market is still somewhat of a waiting one. Dealers are still buying from hand to mouth, laying in no more stock than absolutely necessary, and sharing in the conservative spirit which a good many people have shown a disposition to push along. Meanwhile, however, they are laying up trouble against the time when the stocks in hand shall prove insufficient for the swelling natural demand which usually begins to develop about this time and reaches its highest point about the middle of November.

A man in close touch with the Hardware trade in the Northwest and who has a good acquaintance with conditions in the East says that the Eastern dealer gives more time and space to the cutlery and other fancy lines than the dealers in the Northwest. On the other hand, the Western dealer makes a better pull for sporting goods trade than the dealer in the East. The Western dealer does not seem to have patience enough to cultivate the trade on small articles. He wants to sell a stove, a roofing job, a bill of staples, a gun or anything that will count.

During the past two years no small number of Hardware dealers have taken up the sale of electrical goods. The line has been found profitable, and because most electrical goods are metal goods it seems very proper that they should be handled in the Hardware or metal store.

A Minnesota jobbing house is thus quoted in an exchange: "We find that through the older portion of the territory which we cover—namely, the Northern peninsula of Michigan and parts of Wisconsin—paint is carried quite extensively by the drug trade, although the Hardware men are working gradually into it. Particularly is this the case where new Hardware stores are being established, in which case paint is invariably one of the lines put in with an opening stock; but in the new territory, such as the Northern portion of Minnesota and North Dakota, the paint business is being done almost altogether by the Hardware trade. It would seem like a case of evolution; originally in the drug trade's hands, after a while being controlled by the Hardware trade, and yet after the towns get to be of considerable size paint is a specialty, carried largely by itself. Our opinion is decidedly that paint is a most harmonious line in connection with Hardware and is carried both advantageously and profitably by the Hardware trade on whom we call. The tendency, as previously advised, is more and more for the Hardware stores to carry paint."

TO SUPERSEDE EMERY

Craig Mine Crystal Corundum

CRAIG MINE CRYSTAL CORUNDUM is as uniform as the coins of the realm. It excels the irritatingly uncertain abrasives produced elsewhere, even as the coinage fresh from our modern mint excels the hand-made money of Alfred the Great. Nature made Craig Mine Crystal Corundum. It is all the same in physical qualities; a testimonial in favor of one pound testifies in favor of the whole output.

Craig Mine Crystal Corundum grains are numbered 12, 14, 16, 20, 24, 30, 36, 46, 54, 60, 70, 80, 90, 100, 120, 150, 180 and 200. Find the number that suits your work and continue ordering it.

It Has Been in Continuous Operation Since 1827.

Willis H. Wilcox is preparing to close the Wilcox factory at Riversville, Conn., the first of the year, which has been in operation since 1827, when the father of the present owner Josiah Wilcox commenced the manufacture of carriage Hardware there. During the Civil War as many as fifty men were employed there, and the products were easily sold at forty per cent. profit. Josiah Wilcox was succeeded in the business by his two sons, George and Willis who conducted it until the death of the former a few months ago. In 1888 they received $30,000 from the city of New York for their water rights on the Byram river, and since then have operated by steam power most of the time, though at some seasons there was still enough water pressure to keep the machinery moving.

Carriage clips or shaft couplings, were the only things turned out lately, owing to the competition of larger factories, and Mr. Wilcox declares that the firm had been losing a thousand dollars a year for the past ten years, only keeping the factory going that the men who had been in their employ for a long time might not be turned out.

Since George Wilcox died, the surviving owner stated the situation to his employes, three of whom had been with the concern for over half a century, and offered to sell the plant to them at a low figure if they cared to continue the business. Had he misrepresented the condition of things they might have decided to buy it, so as to be sure of employment the balance of their lives near to their homes, but the relation of employer to employe was a honest one, consequently the men did not purchase when they were told that there was no money to make.

The factory building itself is in poor condition, but the steam power plant, which cost $4,000, is in good condition.

Transportation of iron from Port Chester to the factory has been a great drawback to the concern, each load costing $1.50 to carry and the same amount to return to the freight yards. This accounts for the loss of the owners to a great extent.

POSTAL-CARD HISTORY.

Before the present phrase on the face of United States postal cards was adopted, to inform the user that only the address is to be written on that side, there was a long series of experiments on trial with other sentences meaning practically the same thing. The direction has appeared in at least seven forms.

"One of the earliest cards," says Francis H. Whitney, Private Secretary to Postmaster-General Payne, "was made to bear the sign, 'Nothing but the address can be written on this side,' which was untrue, as many persons could write more if they so desired. Shortly afterward it was changed so as to say, 'Nothing but the address is to be placed on this side,' which was more sensible, but was clumsy and was soon discarded. The next issue of the cards was inscribed, 'The address only to be written on this side,' which it was soon seen could easily be construed to bar the use of a typewriter. The same objection could be raised to 'Write only the address on this side.'

"Finally the authorities got hysterical, and the next issue of the cards informed the user that he could 'Write the address on this side, the message on the other,' which was not only clumsy, but ambiguous, and conveyed a wrong meaning, as the officials really, down in their hearts, had no objection to a person writing the address on both sides of the card. It was finally decided that there was no use in trying to be original, and so they fashioned the phrase which is now in use after the one used on the postal cards issued by the British government. Our English cousins say, 'The space below is for the address only,' and Uncle Sam has 'This side for the address only.'"

MONUMENTAL ARCHITECTURE UNVEILED.

The Completion of the Greatest World's Fair Building Attended With Dramatic Features.

BY W. C. M'CARTY.

The final act that marked the completion of the mammoth Palace of Agriculture at the World's Fair, though unaccompanied by ceremony or demonstration, was as spectacular as the launching of a warship and as impressive as the unveiling of a noted statue.

On the top of a high hill, almost in the center of the Louisiana Purchase Exposition grounds, an army of men had been working all Summer. An enormous structure had been reared, but if it possessed beauty or symmetry it was effectually concealed behind a network of weather stained timbers that the workmen called the "false work."

It was when this "false work" was removed, simultaneously on all sides, that the building instantly assumed majestic proportions. Architectural beauties that had been concealed sprung into view as if by magic, and in the twinkling of an eye there appeared to rise before one a magnificent palace, of unrivaled proportions, with graceful facades, vaulted entrances, large expanses of windows, and walls and columns that appeared as if carved from flawless ivory.

Workmen had been sent throughout the "false work" that had served its purpose. With saw in hand boards and timbers that held the scaffolding together were cut, and ropes were attached to the topmost timbers. Then the men who paved the way for the demolition of the false work sought places of safety on the ground near by. The superintendent under whose orders the building had grown, gave a loud blast on a shrill whistle and the men on the ground gave a sharp pull on their ropes. There was a creaking and a groaning of parting timbers. Then a wavering of scaffolding and a great crash as a tangle of scantlings and boards nearly a mile long and seventy-five feet high fell at the base of the great building.

The usual description of this Palace of Agriculture fails to convey an adequate idea of its magnitude. The fact that it is 1660 feet long and 540 feet wide, covers 23 acres, cost $529,000 and is the largest exhibit building ever constructed to contain a single department, has been told. When one is informed that over 10,000,000 feet of lumber were used in the construction of the building he may yet have an indistinct conception of its magnitude. The amount grows on one when he is told that 600 cars were fully loaded with this lumber. Thirty cars, thus loaded, makes a heavy train, so it will be seen that 20 full trains were required to transport the lumber for this one building to the World's Fair ground.

Vast forests were denuded that this building might rise. In the Southern pineries one acre of forest will on an average yield 6,000 feet of lumber. A little calculating will show that 1666 acres, or nearly two and one-half square miles were required to furnish this lumber.

As the Palace of Agriculture represents only one of the many exhibit palaces of the World's Fair or about one-twentieth of the total building construction it will be seen that 33,320 acres, or over 50 square miles of forest were cut for the erection of the World's Fair buildings.

The nails that were used in joining the timbers for this one building, when one pauses to think of them, speak startling facts. Five cars were required to haul the nails. In each car were 450 kegs. In each keg were 100 pounds. The five cars, or 2250 kegs of nails weighed 225,000 pounds, or 112 and a half tons. The 10-penny nail was the average size used. It requires a strip of steel wire 4 inches long to make one nail. One hundred and six 10-penny nails weigh one pound, and in the 225,000 pounds used there were 23,850,000 nails. The total length of the wire from which these nails were made was 94,400,000 inches. Reduced these figures read 7,950,000 feet, or 1506 miles. Then if the wire were uncut and strung in the form of a cable, it would more than reach from Kansas City to New York.

Eighteen cars of sand were consumed in the plastering of the building. There are 12,000 yards of plaster on the interior and 52,000 yards on the exterior. Of laths used on the inside there were 180,000. There were 18,000 casts of staff 8 feet long and 18,000 pounds of fibre were used in making the staff.

Figures on the painting reveal something of the enormity of the structure. On the inside alone eight cars of sanito were sprayed on the walls and timbers. There were 70 barrels to a car and each barrel contained 450 pounds of paint. With the aid of his pencil a ready mathematician would soon discover that 252,000 pounds of paint were required on the interior alone. And the exterior consumed an equally large amount.

The roofing of the Palace of Agriculture gives one with a penchant for freakish figures a rare opportunity. There are 1,062,400 square feet in the roof. The roofing paper, which was first put on, weighs 50 pounds to a square. A square is 10 feet square or 100 square feet. Thus the paper alone weighs 500,000 pounds. The paper is covered with pitch, 60 pounds to the square. Here is another weight of 600,000 pounds added. Then comes the gravel. One yard of gravel, weighing 2700 pounds, will cover 8 squares of roofing. There were 1250 yards of gravel used on the roof and this weighed 3,375,000 pounds. The combined weight of the paper, pitch, and gravel is 4,475,000 pounds. Should snow fall on the roof to a depth of one foot another weight of 5,182,000 pounds would be added and the pillars would have to bear a total weight of 9,657,000 pounds.

The bolts and rods used in joining the heavy timbers weighed 529,000 pounds.

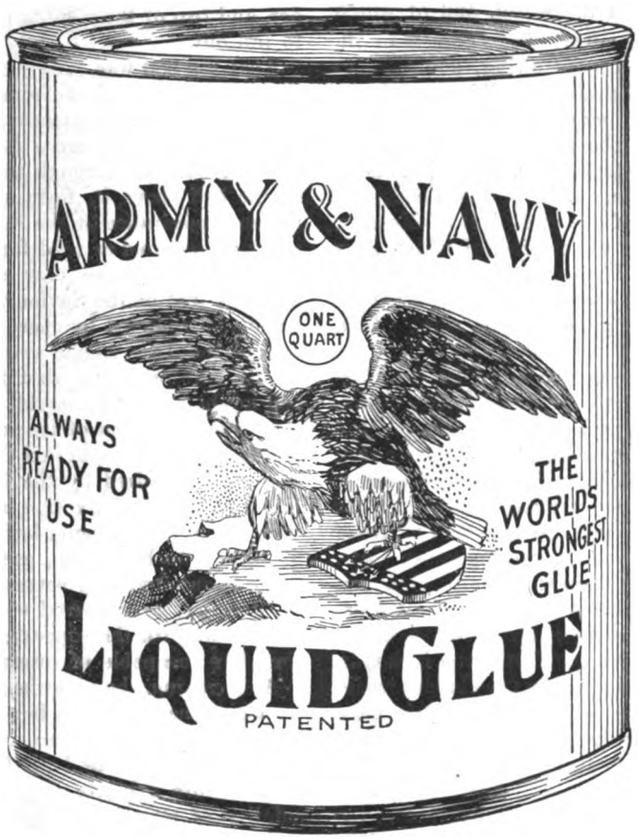
There are 9,840 feet of 8-inch water pipe under the building to be used only in case of fire. Besides this are service pipes and gas pipes that will make the iron pipes in the building reach four (?)

The hill on which the building was erected is not level, though it appears so. The north end of the building is 20 feet lower than the south end. But so great is the length of the structure that it appears perfectly level.

One hundred and forty-five thousand six hundred and forty-nine panes of translucent glass, each 18x23 inches were placed in the sash in the Palace of Agriculture. It required 10 tons of putty to do this. Were all of the glass made into one piece it would cover a surface of 185,439 square feet, or over four acres.

In erecting the building there were 796 posts, 69 to 67 feet tall, and made by joining and bolting four 10x12 timbers. There were 80 trusess 106 feet long, each weighing 12 tons. There were 536 smaller trusses that weighed seven tons each.

Caldwell & Drake, the contractors who built the Palace of Agriculture, with a force of 750 men completed the frame work of the great structure in 46 working days. Mr. Caldwell says that if the occasion had demanded faster work he could have done it in 30 days.



WHAT BURGOO IS.

A Kentucky Colonel Says it is a Cross Between a Soup and a Stew.

"Burgoo," explained an old Kentuckian, "is one of the oldest Kentucky dishes we have. No one knows who first made 'burgoo,' nor does any one know where or how it got its queer name. 'Burgoo' is an out-of-doors creation, and pots of 'burgoo' have simmered over a hot fire in the sun at every big political gathering in the State since Henry Clay was a boy, and years before that, too. It is not only an extremely palatable dish, if you can call it that, but it's very nourising. 'Burgoo' is a cross between a stew and a soup. It is always made in the open air. The 'burgoo' the Blades of Grass ate to-day was very rich.

"How was it made? Well I took a big caldron, put some red pepper pods in the bottom, added some potatoes, tomatoes and corn; then put in half a dozen prairie chickens, as many more tender 'yellow legs,' and a couple dozen soft-shell crabs. I'd have added some young squirrels, but they could not be obtained. When everything is in readiness there is enough water put into the caldron to just make the contents float. Then it is put on the fire. It must be allowed to simmer slowly for six hours and must be stirred constantly with a hickory stick. A hickory stick is best and always used, but another might do as well. When it is nearly done it may be flavored to suit the taste. It is done when the meats are thoroughly shredded, not before. When it is done —Um!" and the veteran's eyes sparkled at the prospect.

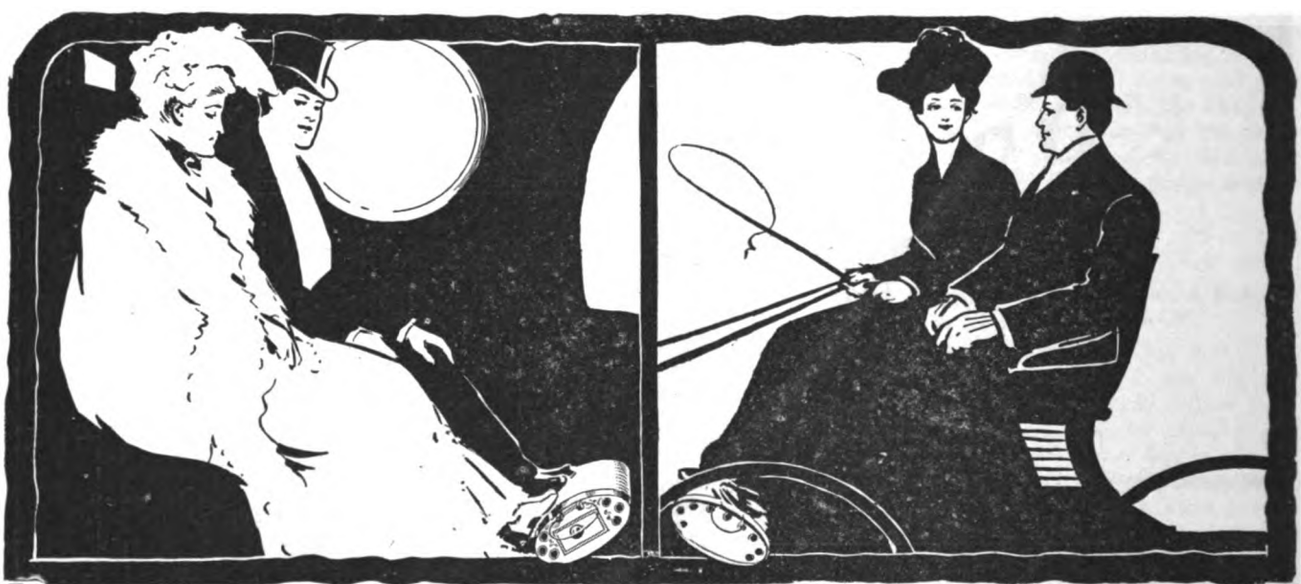
AMERICAN BELLS AHEAD OF ALL OTHERS.

American bells are recognized now in all the foreign countries as superior in tone to any other make. The largest bells have been cast in Russia, China and Japan. The immensely large bells which exist in the world, and of which mention is made in history, have always been objects of interest and wonder. Their existence is owing, doubtless to the tendency which semi-civilized nations exhibit toward displays of magnificence, as also to a religious enthusiasm which in Christian countries regarded the provision of these immense bells for churches, monasteries, etc., as being meritorious in proportion to their size. Both of these considerations tended to the production of the great bell of Moscow, of which every one has heard, at the casting of which it is recorded that the nobles from all parts of the empire were present, vying with each other in the value of the votive offerings, such as gold and silver plate, jewelry, etc., which they cast into the furnace.

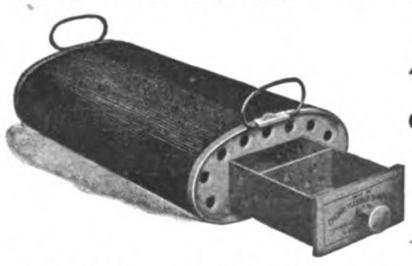


The "King of Bells," it is commonly called by the Russians, stands at the foot of the tower of Ivan Veliki, within the Kremlin, at Moscow, not far, probably, from the spot upon which it was cast from furnaces erected specially for that purpose. It is placed upon a circular wall or base of granite of about five feet in height and four feet in thickness. The grounds and buildings are of immense size, and tend to dwarf its appearance in approaching it from the Redeemer Gate.

It is not until the visitor has obtained a nearer view and measured it by his own size that he is able to realize the extent of its colossal proportions. It measures twenty-two feet eight inches across the mouth, nineteen feet three inches in height, and its thickness at the point where the clapper would strike is twenty-three inches. Its estimated weight is from 40,000 to 440,000 pounds. A nearly triangular-shaped piece of about six feet in height by seven feet at the base, the estimated weight of which is eleven tons, is broken out of its side at the rim and stands upon the ground just below the opening thus formed. Besides this fracture, there are eight cracks, distributed around the remaining portion of the rim at about equal distances, running up from three to seven feet, which cracks can only be accounted for upon the theory that the contraction of the metal upon the inner mould in cooling after casting, hastened, perhaps, by the accidental presence of water in the casting pit, caused it to split asunder, and two of these splits running together caused the piece to fall out.

That the bell was rung—a question which has caused some discussion—is evident from the inscription upon its base. In placing it in its present position it was intended that it should be made to serve as a chapel, with which view an opening was left through the pedestal wall, which with that in the bell above it, form an imposing entrance; but the present appearance of the interior would indicate that it was never consecrated or used for such a purpose. There are several religious figures cast upon its outer surface, among which is that of the Saviour, the Holy Virgin and the Evangelists, surrounded by cherubim. It also bears a representation of the Tsar Alexie and the Empress Anne.

Any opinion as to what the ringing quality of the great bell might have been would, of course, be merely conjectural, but an examination of its proportions shows that it is rather too thick to have vibrated freely, while its tone would have also been impaired by the large quantities of silver thrown into the furnace as votive offerings at the time of the casting; recent experiments having shown that the introduction of silver into bell metal, contrary to poetical conception and popular opinion, only serves to deteriorate its ringing quality, it being, as compared with tin (the usual complementary ingredient with the copper), more of the nature of lead, and therefore incapable of producing a hard, resonant metal.



As a casting, the great bell is a specimen of excellent workmanship, the numerous bas-relief figures upon its outer surface, together with its ornamentation and inscriptions, being brought out clear and distinct, while the section shown by the fracture exhibits homogeneousness of composition and solidity of structure. But for an unfortunate scab in the waist marring the outline of the drapery of the principal figure, the casting might be called perfect, an accomplishment

KEEP YOUR FEET WARM WITH A

CLARK CARRIAGE HEATER

AND YOU'RE WARM ALL OVER

difficult of attainment, owing to the immense strain and wash of the moulds occasioned by such a mass of molten metal, almost in proportion to the weight of the bell. In fact, judging from the mode of manufacture now employed in the extensive and celebrated Moscow Bell Foundry, it is probable that no improvements in the art of bell making have been introduced in Russia since the casting of the great bell, a remark that will apply, too, for a period of two centuries past, to any country in Europe.

As for improvements in bell mountings, the Russians have no mountings for their bells. They simply suspend them stationarily from beams and sound them by pulling the clapper, so that the effect is that of tolling instead of ringing. All preparations and work, except price of metal, of the great bell of Moscow, cost 62,000 rubles, nearly $47,700. The total cost was about $300,000.

Among other bells noticeable for their size might be mentioned that of Erfurt in Germany, weighing 30,000 pounds, which was cast in 1479, and was long distinguished as being not only the largest but the best in Europe. In Vienna and Olmutz are bells of 40,000 pounds each, cast in the last century; while that of Notre Dame Cathedral at Paris, cast in 1680, weighs 30,000 pounds. The bell of St. Peter's at Rome weighs 17,000 pounds; that of St. Paul's London, 11,000 pounds; that in York Minster, called Great Peter of York, 27,000 pounds; the Parliament House bell, in London, 30,000 pounds; Great Tom of Lincoln, weighing 10,000 pounds, cast in 1680, was long celebrated as the finest bell in England, but becoming cracked was recast in 1885. The celebrated Great Tom of Oxford, which hangs in the tower of Christ Church and strikes 101 times every evening at 9 o'clock, weighs 17,000 pounds and was cast in 1630.

There is a bell in Pekin, China, which weighs 120,000 pounds; it is 14 feet high and 12 feet in diameter. The Chinese formerly made their bells nearly square in shape. At one time it was the custom to make their bells of several pieces of metal welded together, but these necessarily lacked vibration and were useless. The metals used in the manufacture of the oldest bells of which we have any record were the same as those now in use, namely, copper and tin. The long experience of the ancients, as well as the careful tests of later years has clearly proved that these are the only metals capable of producing a proper alloy. The largest bell in America is in the Cathedral of Montreal; its weight is 28,000 pounds. That in the Public Building in Philadelphia is to weigh between 20,000 and 25,000 pounds.

ANCIENT SHEFFIELD.

Attention has recently been drawn to the interesting fact that some of the oldest firms in the world are to be found in Sheffield. One of the cutlery firms was founded in 1609, another—still bearing the famous name of Rodgers—in 1682, and a third traces its operations back without a break to the early days of the seventeenth century. In the heavy metal trades there are many venerable firms. One was established in 1654, and has worked uninterruptedly in the manufacture of iron and steel ever since; several sprang up in the middle of the eighteenth century, and some of the best known manufacturers of the modern heavy forgings, armor, and guns are well on the way to number their years by the hundred.

HOW FIRES MAY START.

Damp lampblack will ignite from the sun's rays. The same can be said of cotton waste moist with lard or other animal oil. Lampblack and a little oil or water will under certain conditions ignite spontaneously. Nitric acid and charcoal create spontaneous combustion. New printers' ink on paper when in contact with a steam pipe will ignite quickly. Boiled linseed oil and turpentine in equal parts on cotton waste will ignite in a few hours under a mild heat and will in time create enough heat to ignite spontaneously. Bituminous coal should not be stored where it will come in contact with wood partitions or columns or against warm boiler settings or steam pipes. This coal should not be very deep if it is to be kept on storage for a long period. If piled in the basement of a building it should be shallow and free from moisture and under good ventilation. That liable to absorb moisture should be burned first. If on fire, a small quantity of water showered on this kind of coal cokes it and retards any great supply of water reaching the fire, thus necessitating the overhauling of the pile. Iron chips, filings or trimmings should not be stored in a shop in wooden boxes. The oily waste which is not infrequently thrown among them adds to the danger of fire from this source. The sweepings from the machine shop, if kept on hand, should never be placed over iron shavings. This mass of disintegrated iron is enough to incite heat and combustion. Iron and steel filings and turnings when mixed with oil will ignite spontaneously after becoming damp. A steam pipe against wood will cause the latter to ignite spontaneously after being carbonized.—*Cassier's Magazine.*

BILLIONS OF TOOTHPICKS.

Made by Machinery in Maine Chiefly, and by Hand in Portugal and Japan.

Nobody knows how many billions of wooden toothpicks are made and used in this country every year. The aggregate is so enormous as to be practially incalcuable. And to the total of the domestic product must be added the imported toothpicks.

While the output of this industry is so vast, American ingenuity has improved automatic machinery until it requires the employment of comparatively few persons. Ninety-five per cent. of all the toothpicks manufactured in the United States are made from white birch timber in Franklin County, Maine, and yet scarcely more than a hundred persons are employed in the industry in that State. Outside of the State of Maine, the principal factories are in Pennsylvania, Massachusetts and western New York. Some maple and poplar are used in the manufacture of American toothpicks, but white birch is the standard timber in all the factories.

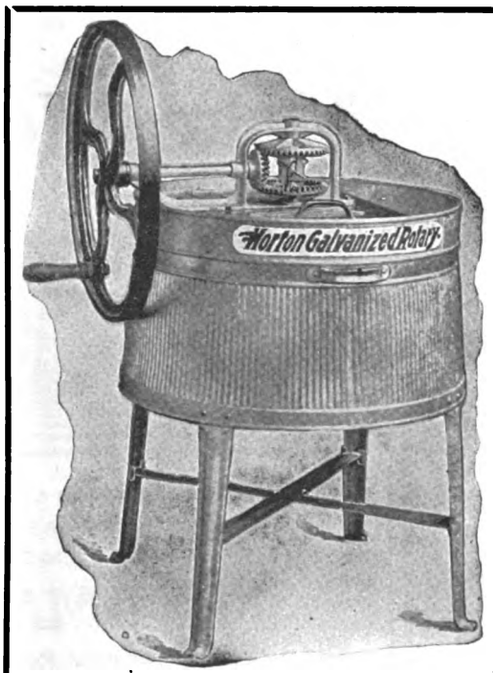
The industry is a very simple one. First, of course, comes the work of the foresters, or lumbermen. In the forests of Maine every winter there are great camps of lumbermen engaged in felling and hauling out timber for various commercial uses. Whenever the foreman of a camp comes across a particularly fine white birch tree he orders it cut down, and the main part of the trunk laid aside to be reserved for the toothpick factories. When enough logs have been obtained, they are sent along down to the boom nearest the factory, whence they are hauled by teams. To show that the vast supply of toothpicks comes from a very small proportionate quantity of timber, it may be said that more than 5,000 cords of wood are used in this industry annually.

When the logs reach the factory they are first stripped of their bark. The logs are then placed on trucks, moving on rails, and pushed up to the automatic machines by which they are cut into veneers. Veneers, as applied to this industry, are thin strips of wood of about the dimensions of an ordinary piece of blotting paper—that is, the strips are about as thick as the toothpicks are intended to be and as wide as the picks will be long Extreme care must be exercised in placing the logs in the machine so as to have the grain run straight in the strips. The veneers are fed into a machine composed of peculiarly shaped and rapidly revolving knives, the edges of which are as sharp as they can be made. This machine works automatically and with tremendous speed, and is so constructed that the finished picks come forth sharpened at both ends at the rate of tens of thousands an hour. It requires only a few weeks for the factories to turn out a supply sufficient to meet the demand for a whole year. Then the factories are shut down again, to remain closed, until the following spring. The wagers paid to American workers in this industry range from $1,50 to $3.50 a day.

Most of the toothpicks made in Maine come from timber that has been seasoned in the open air. Picks of that material retain something of the natural sweetness of the birch and maple and are soft and pliable while retaining sufficient firmness. Kiln-dried wood is apt to result in too much brittleness, causing sharp splinters to break off, which injure the enamel of the teeth. Recently some of the American manufacturers have been putting up tootpicks in miniature barrels highly ornamented by carving or hand painting. These are turned out at the same factories.

The best toothpicks made anywhere in the world come from Portugal. They are whittled by hand from orange-wood to splints by peasant girls, the only tool used being an ordinary jack-knife. These picks are as smooth as ivory and will not break into splinters. They are expensive. The girls who make the picks receive less than ten cents a day. As the duty on the foreign-made picks is only 35 per cent., they can be sold here for less than picks of similar quality could be manufactured in this country, despite the improved American machinery and skilled labor. The profit on American picks is almost exclusively on the cheaper products. Some of the Portuguese picks are highly ornamented with hand carving. They are too expensive for ordinary commerce. Small quantities have been imported into this country on rare occasions for use at notable banquets, or as unique specimens of handicraft.

Learn Advertising



There is no thing so valuable to the man in business as a knowledge of advertising. It is the greatest force in modern business and no young man can hope to achieve a substantial and enduring success without it The advertisement writer and manager is one of the highest priced employees in any business, and his opportunities for advancement are the best. Any man with a good common school education can win for himself a place in the advertising world.

Many of those who have followed my instructions now hold positions with leading concerns and are receiving from $30 to $125 per week. Mr. Charles H. Brown, President of The Chicago Pure Food Marketing & Distributing Company, says: "About six years ago the business at which I was working paid me $20 per week. I studied advertising and in a very short time I doubled my salary. Six months ago I was elected President of a $250,000 Corporation and I am Vice-President and Manager of another large corporation with liberal stockholdings in each. The foundation of the progress I have made was laid by the careful study of Bates Literature. I am satisfied that the foundation for a career in the advertising business can be made by mail, and I am satisfied that Mr. Bates can do this better than any other person or organization in the world."

My course is the only one being given in connection with an actual advertising business. It is therefore the most practical course. "A Business Course for Business Men."

If you are dissatisfied with your present salary, if your work is uncongenial, or if you wish to learn to advertise your own business in the most effective manner, send three two-cent stamps for my handsome sixty-page prospectus telling how and why advertising can be taught, who should study advertising, and booklets "Ill Fortunes of Brother Bill," "Other People's Brains," and "How Shall A Young Man Succeed?"

Next to Portugal, Japan sends the greatest supply of toothpicks to the United States. These are made by hand from fine reeds. They, too, are sold in close competition with the American product, owing to the cheaper labor in Japan. The cases in which the Japanese picks are inclosed are fine specimens of skill with the jack-knife. They are of wood, cut into strips as thin and delicate as tissue paper, but very strong. The cases are ornamented with hand-painted Japanese scenes and are of a size convenient to be carried in the vest pocket. An importer of toothpicks has said that the Japanese picks can be made and sold in the American market, cases and all, for less than the cost of the paper boxes that contain the domestic picks.

ARTIFICIAL PUMICE.

While emery is used for sharpening tools, sand for polishing stones and glass, oxide of iron for fine glass, and chalk and felt for metal ware, pumice is most frequently used for sharpening soft materials. Pumice stone is unreliable, both in grain and hardness. Variations have been noted even in the same piece. This has suggested the idea of replacing it with artificial pumice. Consul-General Oliver J. D. Hughes of Coburg, Germany, reports that the factory Schumacher, at Bietigheim, in the valley of the Enz, has been manufacturing an artificial pumice stone out of ground sandstone and clay for some time, and it is interesting to note to what extent this manufacturer has tried to adapt his products to the various purposes for which they are required. There are on the whole ten kinds, differing from each other in regard to hardness and grain, viz: There is (1) a hard and a soft kind with coarse grain, particularly useful in the leather, wax cloth, felt and wood industries; (2) a hard and a soft kind with medium coarse grain, suited to stuccoworkers and sculptors and particularly useful for polishing wood before it is painted; (3) a soft, fine grained stone for the white and dry polish of wood and for tin goods; (4) one of medium hardness with fine grain, for giving the wood a surface for an oil polish; (5) a hard, fine grained one for working metals and stones, especially lithographic stones; and finally pumice stones with a very fine grain. These artificial stones are used in pretty much the same way as those of volcanic origin. For giving a smooth surface to wood a dry stone is applied, but to give it a fine polish the stone is dipped in oil. For fine work no coarse grained and for coarse work no fine grained stones are used.

NEW IDEA IN PRINTING PHOTOGRAPHS.

A machine which prints photographs at the rapid rate of over 800 an hour is in use for the American World's Fair of next year. It is engaged in turning out prints for the Press Bureau of the Exposition, which sends them to newspapers and other publications throughout the country. The machine is a compact affair in the shape of a small table. Under the top of the table is a small cabinet containing a 500-candle-power electric light which is always in operation. The rays of this light are concentrated upon a sheet of sensitive paper placed in a device on the top. The printing operation is performed by the manipulation of a treadle, which is moved back and forth under the table, and the prints are made almost as rapidly as this can be done. In fact, the speed of the machine is almost as great as a foot-power printing press. The paper used is what is known as developing paper, which is sensitive to artificial light. The machine is fed by hand. The operator puts the sheet in place and drops the lid over it, insuring perfect contact of the paper with the negative. Pressure on the treadle opens a wing shutter under the table, which heretofore protected the negative from the action of the light. A second or two at the most is sufficient for the exposure, and as the treadle is allowed to fall back into normal position the shutter is again closed. Upon raising the lid the paper is projected by a spring attachment, leaving all in readiness for the succeeding sheet. The operators of this machine have become very proficient with this clever bit of mechanism. Recently a record of 846 prints in an hour from the same negative was established. On another occasion, when it was necessary to make prints from thirty different negatives, 1,500 prints were made in three hours. The latter task, under ordinary circumstances, would have required the services of six men. The machine is the invention of F. P. Stevens, who has been a photographer for many years.

HARDWARE MANUFACTURERS' RECORD.

Hardware manufacturers over the country, are requested to contribute to this page. News of new factories or companies, changes, improvements, etc., will be gladly received, and promptly published.

New Incorporations, etc.

Akron, Ohio.—The Akron Selle Company, capital stock, $100,000, has been incorporated by M. Otis Hower, F. M. Atterholt, F. B. Theiss, E. R. Held and A. F. Berger. They will make all kinds of wood and metal specialties.

Bellevill, Ill.—Quality Stove & Range Company has been incorporated. Capital, $20,000; manufacturing stoves; incorporators, Louis Opp, Henry Ehret, G. M. Jackson, Jr.

Chicago, Ill.—Ajax Forge Company has been incorporated. Capital $250,000; object, manufacturing forging and machinery; incorporators, William W. Evans, Gardner G. Willard and Andrew Hummeland.

Chicago, Ill.—Golden Rule Cutlery Company has been incorporated; capital, $5,000; incorporators, Nels Rylander, A. P. Bengston, L. C. Humphreys.

Chicago, Ill.—Solid Steel Tool and Forge Company has been incorporated, capital $1,000; incorporators H. H. Miner, May Hyde and W. B. Moah.

Fairmont, W. Va.—The Mountain City Stove and Foundry Company has been incorporated to manufacture all kinds of stoves and to carry on general foundry business. Capital $25,000. Incorporators, M. L. Hutchinson, G. M. Jacobs, J. S. Echols, and M. L. Sheets, of Fairmont, W. Va.

Kansas City, Mo.—The Kansas City Wheelbarrow factory company's building in Armourdale has been finished and the factory is now in operation. The new enterprise will employ about 100 men. Wheelbarrows for the South American trade will be manufactured.

Lansing, Mich.—The National Twist Drill & Tool Company of Detroit has been incorporated; capital $20,000. The incorporators are W. H. McGregor, Peter J. Hoenscheid, C. R. Becker, W. H. Warren, A. W. Ehrman, C. J. O'Hara, George M. O'Connor, Otto Reinhardt, Richard M. Watson and John Zeus.

New York, N. Y.—Eureka Stove Fixture Company has been incorporated; capital, $12,000. Directors: H. H. Vollmer, Pohumii Soucek, and Adolph Sandhop, New York.

Patapsco, Md.—The Patapsco Machine and Supply Company has been incorporated for manufacturing and dealing in brass, Hardware, marine and electric specialties and other supplies. Incorporators, Charles Tyler, Robert L. Gill, Walter B. Tyler, F. Oscar Reuter and N. Rufus Gill. The authorized capital stock is $25,000.

Philadelphia, Pa.—The Philadelphia Screen Manufacturing Company has been incorporated to make door and window screens. Capital stock, $100,000.

San Angelo, Tex.—San Angelo Manufacturing Company has been incorporated, capital stock, $25,000; purpose, manufacture of wood, iron, brass, copper, tin and all kinds of metals into goods, wares and merchandise; incorporators: J. R. Copeland, George Richardson, John Findlater and E. R. Jackson.

St. Louis, Mo.—The Walter A. Zelincker Supply Company has bought block 14, Denverside, upon which the company will erect a large warehouse and factory for the manufacture of Hardware specialties.

St. Mary's, Ohio.—The Smith Vehicle and Hardware Manufacturing Company has been incorporated, capital stock, $15,000, by James P. Smith, J. J. Dunn, S. G. Neely, D. F. Mooney and J. Z. Riley.

Wichita Falls, Texas.—The Wichita Falls Implement Company has been incorporated. Purpose, to do a general merchandise business, especially to deal in implements, machinery, etc. Incorporators, W. A. McCutcheon, G. H. Jackson and J. W. Henderson.

Changes.

Akron, O.—A contract has been closed between the J. F. Seiberling estate and a company composed of Pittsburg, Cleveland, Chicago and local capitalists for the purchase of the old Empire mower and reaper works. Cutlery will be manufactured, and 150 hands will be employed at once with probably 400 by the end of the year.

Anderson, Ind.—The extensive improvements at the Anderson, Ind., plant of the American Wire & Steel Company are now complete. About $1,000,000 has been spent on the work, and the plant has been doubled in size. The work was started last March. All of the old boilers have been tore out and replaced with new ones. The gas furnaces were taken out and coal furnaces substituted. The old part of the plant is in full operation it is believed that the machinery will be in place and the new buildings ready for operation about January 1, 1904. They will eventually employ over 1,000 men.

Auburn, R. I.—The Washburn Wire Company of Phillipsdale has purchased the entire raw wrought and in process stock of the John Wales Wire Co. The officers of the Washburn Wire Company are: Eugene F. Phillips, President; E. A. Smith, Vice President; Joseph Rennick, Treasurer and C. R. Remington, Jr., Secretary and General Manager. Mr. George R. Wales, who was president of the John Wales Wire Co., will be connected with the new management in the sales department.

Bridgeport, Conn.—Work is to start immediately on the erection of two additional factory buildings for the Eaton, Cole & Burnham Company, manufacturers of Hardware. One of the structures will be 80x385 feet, two stories high, and the other will be 80x150 feet, two stories high. Both of the structures will be of brick.

Franklin, Pa.—The Grant Tool Works have been sold for $5,000, the purchaser, William J. Bleakley, of Franklin, assuming the indebtedness.

Mill Hall, Pa.—The board of directors of the American Axe and Tool Co., ratify the sale of factories Nos. 5 and 8, of said company, located at Mill Hall, to the Mann Edge Tool Co., of Lewistown, and thus the original Robert Mann factory passes back into the hands of his children and heirs. This deal also includes all the machinery contained in these factories, together with all appurtenances used in the manufacture of axes and tools. The capital stock of the new company will be $200,000, every dollar of which has been taken by the heirs of the late Robert Mann. The A. A. & T. Co. will continue to operate these factories until present orders shall have been filled which will probably be until near the close of the present year. It is also stipulated in the agreement that the said A. A. & T. Co., shall have ten days in which to remove all axes in stock or in process of manufacture.

New Britain, Conn.—The Russell & Erwin Company has moved machinery into its new factory. The building is 175 feet by 50 and seven stories high. It will be used for the bronze Hardware department. The present quarters are overcrowded and the addition will give much needed room.

Pittsburgh, Pa.—The machine tool business of the Pittsburgh Shear, Knife & Machine Company has been purchased by the Erie Foundry Company, Erie, Pa., which concern will hereafter manufacture the tools at its plant in the latter city. The Erie Company intends to increase its facilities and will greatly extend the newly acquired line.

Wilkes-Barre, Pa.—The South Wilkes-Barre Cutlery Works will be enlarged by an addition 65 feet by 33 feet and two stories high. Two new boilers will also be placed in the building.

A Long (K)Night In HARDWARE

¶ For years retail hardware men have been groping in the dark, looking for some efficient way to increase their business—some of them have found it!

Warren's Patent Sectional Glass Front Shelving

is designed and manufactured by a Hardware Man for Hardware Men.

¶ You can keep a line of samples of your entire stock on exhibition at all times.

¶ It preserves each article in the same attractive newness that it comes from the factory, prevents *dust, rust, finger-marks and dirt.*

¶ It enables you to sell goods to a *German*, a *Scandinavian* or *any* other foreigner who, even though he cannot speak English can *point* to what he wants.

¶ It improves the appearance of your store *too per cent;* enables your salesmen to spend their time *selling* goods instead of *hunting* for them, and will *pay for itself in one year.*

¶ Send dimensions of your store and let us supply you—FREE—with a color plate made to scale, showing how *your* store will look when equipped with The Best Shelving in the world for your purpose.

¶ Remember the shelving is made on the unit plan—if you want to experiment—don't wish a complete outfit now—you can buy one—two—three stacks or sections—the rest will follow as your satisfaction increases.

BICYCLE AND SPORTING GOODS RECORD.

Bicycle manufacturers and dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Incorporations, etc.

Baltimore, Md.—The W. J. Hooper Co. has been incorporated in North Carolina to manufacture fishing tackle, nets, twine, etc.

Binghamton, N. Y.—The Sportsmen's Supply Co. has been incorporated. All of the capital stock has been paid in. Incorporators are: James B. Weed, Guy B. Haskell, Louis M. Weed and others.

Deep River, Conn.—W. E. Rutty will open a jewelry, sporting goods and gun store.

East Orange, N. J.—The American Saddle Company, with principal office at No. 76 East Park street, has been incorporated with a capital of $50,000 and these incorporators: Albert Pope, Albert L. Pope, and Paul Walton, all of East Orange for the sole purpose of taking over the saddle factory that has been maintained in Paris.

Pasedona, Cal.—The Graham-Salisbury Hardware Company is a new concern which will carry a line of sporting goods.

Plymouth, Mich.—The Markham Air Rifle Co. has been incorporated with $125,000 capital stock.

Pottsville, Pa.—The Pennsylvania Powder, Dynamite and Fuse Mfg. Co. has been incorporated. Capital stock, $20,000. Its officers will be located in Schuylkill.

St. Louis, Mo.—The Standard Automatic Fire Arms Company has been incorporated to manufacture and deal in fire arms, capital stock, full paid, $2,000. Incorporators, Joseph J. Reitgraber, John T. Hunt, Eugene Devine, H. S. Albrecht, A. Schoellhorn.

Toledo, O.—The Consolidated Manufacturing Company of Arizona, capital $600,000, has been admitted to Ohio to locate at Toledo. The incorporation of this company is preliminary to the proposed consolidation of the Snell Cycle Fittings Company, with certain other manufacturing interests of the city, including the right to manufacture and sell the Yale bicycle.

Toronto, Can.—The Dreanite Explosive Company of Canada has been incorporated; capital stock $200,000, and with its principal offices in Toronto. The manufacture and sale of all kinds of explosives will be the business of the new company.

Utica, N. Y.—The Utica Cycle Company has secured a four years' lease of the corner store in the Odd Fellows' Temple and will conduct a retail bicycle store in that place. The store is to be greatly improved, and the new concern will move in as soon as the alterations are completed.

Washington, D. C.—The Manson Motor Bicycle Company has been incorporated. The incorporators are William S. Coffman, William E. Death, J. H. Vermilye, V. G. Thomas and Elphonzo Youngs; capital stock, $2,000,000.

Changes.

Chester, Pa.—W. R. Trainer has disposed of his stock of sporting goods.

Chicago, Ill.—The effects of the Jenkins Cycle Co. have been purchased by William McDougal, No. 357 No. State Street, and will supply parts for the Napoleon and Josephine machines formerly made by that concern.

Deep River, Iowa—Cornell Bros. have sold their Hardware and sporting goods business to Icenbise & Whitney.

Kewanee, Ill.—S. L. Stebbins & Company have succeeded Scott & Sweet, and will handle sporting goods and bicycles. This is a consolidation of the business of two firms, Mr. Stebbins having been a dealer in sporting goods in the same town.

Marion, Ill.—Duncan & Baker have reorganized as the Duncan-Baker Hardware Company. Sporting goods will be carried.

Middletown, Ohio.—The Eisenhuth Horseless Vehicle Company, which recently purchased the fine Keating bicycle plant is about to resume operations on a scale of some magnitude. In addition to automobiles, motor bicycles will be manufactured.

Mifflenbury, Pa.—Craten C. Rote has removed his bicycle and gun shop from Market Street to the Schoch Building on Chestnut Street. He is carrying an up-to-date line of guns, hunter jackets and outfits, loaded shells and ammunition, etc. Bicycle repairing also attended to.

Minneapolis, Minn.—The Great Western Cycle & Auto Company has removed from its location at First Avenue and Sixth Street to 612 First Avenue. The change was made necessary by a need for larger quarters. In addition to the store, the company has leased a garrage, and they are now provided with all the latest facilities for the proper care and storage of automobiles as well as for repairing and sundry work.

Parker, S. D.—The Roper-Morgan Hardware Company has succeeded M. S. Clark in the Hardware and Sporting Goods trade.

Toledo, Ohio.—W. L. Milner & Company have purchased the photographic supply stock of M. A. Martin.

Wilmington, Del.—David A. Hay and Company have purchased the stock of fishing tackle, nets, twine, etc., formerly owned by F. Taylor, 121 Market St.

York, Pa.—The Rockdale Powder Co. with its plant at Hoffmanville, Md., announces that it will be recapitalized and issue $2,500,000 of common stock and $2,500,000 in bonds. New plants are contemplated in California, Missouri, New Jersey and in the Philippine Islands.

Embarrassments.

Milwaukee, Wis.—A receiver for the bicycle plant of James L. Board, is asked in a bill filed in the superior court yesterday by the Mutual Life Insurance Company, which wishes to foreclose on a bond for $64,000 against Board.

Tyler, Tex.—A petition in bankruptcy has been filed by George W. Beadsley, dealer in sporting goods.

Waverly, Iowa.—The sporting goods store of Carl F. Black, has closed its doors and its affairs are in the hands of the State Bank of Waverly. It is believed the assets will exceed the liabilities.

Worcester, Mass.—Although the doors of the banking house of Winslow & Co. are closed and probably will never be reopened under the old name, the business of the Samuel E. Winslow Skate Manufacturing Company will be continued by Receivers George S. Taft, of Worcester, and Thomas N. Perkins, of Boston.

Miscellaneous.

New York, N. Y.—The common and preferred stocks of the American Bicycle Company have been stricken from the Stock Exchange list.

Scranton, Pa.—J. D. Williams & Bro. Co. have selected Clarence M. Florey as manager of their sporting goods department. He was formerly a member of the firm of Florey & Brooks.

SHOE KNIVES,
Butcher and Kitchen Cutlery, Carpenters' Drawing Knives, Cigar Knives, Screw Drivers, etc.

INDIA OILSTONES

India Oilstones are as nearly perfect as an Oilstone can be.

They are of uniform grain throughout assuring an even working surface at all times.

They are manufactured in coarse, medium and fine grades; all shapes and sizes, which adapts them to every class of work.

They cut faster and wear longer than any other oilstone on the market.

India Oilstones are sold by leading tool dealers the world over.

Manufactured by

Norton Emery Wheel Co.

Please Notice—We have a complete line of Arkansas, Washita, Queer Creek and Hindostan Oilstones; also Scythe Stones, Razor Hones Knife Sharpeners, etc. You can cover your complete requirements in the sharpening stone line with one order placed with us.

HOW DOES THIS STRIKE YOU?

TRY BEFORE YOU BUY.

To further demonstrate to you that our Lighting System is a "Money Saver," and the most practical and safest on the market, we will allow free trial for ten days and guarantee it against imperfection for two years. Can you afford to be in darkness any longer with this opportunity before you? Send in your Diagram for Estimate. We are manufacturers, not assemblers. Avoid cheap imitators who demand money in advance.
